Teacher Education and Curriculum and Instruction
Courses: Fall 2024

EDUC103001

Child Development

MacEvoy, Julie P

Fall 2024

This is one of two foundational courses (APSY 1030 & APSY 1031) focused on multiple dimensions of child development from the prenatal period through middle childhood, with a consideration of applications to educational and other applied settings. The course offers an overview of the array of research methods used in developmental psychology; normative trends in physical, social-emotional, and cognitive development; and factors and processes that affect developmental change and optimize child development. Key questions in the field of developmental psychology, such as "How do nature and nurture together shape development?" and "How do children become so different from one another?" will recur across topics to help students establish a coherent understanding of child development.

Credits: 3

Room and Schedule: 245 Beacon Street Room 107 TuTh 09:00AM-10:15AM

Satisfies Core Requirement: Social Science

Learning and Curriculum in the Elementary School

Homza, Anne E

Fall 2024

Introduces students to the profession of education and roles of teachers. Provides understanding of contexts in which education is delivered in multicultural settings and opportunity to gain knowledge and experience about interpersonal, observational, and organization skills that underlie teaching. Faculty and students work together throughout course to examine students' commitment to and readiness for career as a teacher. Introduces essentials of curriculum, teaching, and managing classrooms at elementary (K-6) level and links them to major learning theories for children. Views curriculum, instruction, management, and learning theory from perspectives of current school reform movement and social/cultural changes affecting elementary classrooms and schools.

Teaching Language Arts

Yatsu, Kei

Fall 2024

Focuses on the teaching and learning of language arts in the elementary grades. Students will be exposed to theoretical approaches to both oral and written language development in addition to a wide variety of teaching methods. Students will have the opportunity to apply their learning through practical lesson development, and encouraged to reflect on their experiences via the theoretical perspectives highlighted in the course. Student diversity and its implications for teaching language arts will be an integral theme. Students will draw on their experiences in their prepractica to apply and reflect on learning as they mediate theory and practice.

Teaching Reading

Beauchemin, Faythe P

Fall 2024

This course is designed to offer preservice teachers theoretical and practical knowledge and experience into teaching literacy to elementary age students. Emphasis will be placed on the social, political, and cultural context of reading instruction. Students will gain understanding of major theoretical perspectives on literacy development and the myriad strategies for teaching reading in a variety of contexts. Students will also be expected to spend time in a context where they can gain experiences in providing reading instruction in a relevant and productive way.

Teaching the Social Sciences and the Arts

McKay, Tatisha

Fall 2024

Provides prospective elementary teachers with opportunities to develop social studies and arts curricula for elementary age students and consider a variety of instructional approaches appropriate for this age group. Students will learn how to develop the skills of an historian and select and integrate knowledge appropriate for diverse learners. Curricular topics include evaluating context-appropriate materials, developing critical thinking, using and critiquing primary sources in the classroom, and developing varied learning activities through the use of multiple media.

Teaching Mathematics and Technology

Keyes, Madeline

Fall 2024

This course presents methods and materials useful in teaching mathematics to elementary school children. It analyzes mathematics content and pedagogy from both conceptual and practical perspectives. Emphasis is placed on the interconnections among theory, procedures, and applications that form the framework on which specific mathematics lessons are constructed. It examines the elementary mathematics curriculum through technology resources, addressing the different ways in which technology can be used. Activities include laboratory experiences with concrete models and technology as well as inquiry into the role of the teacher in the school community in the epoch of teaching for social justice.

Teaching About the Natural World

McNeill, Katherine L

Fall 2024

This course is designed to increase confidence, enthusiasm and knowledge for teaching elementary science. Science can be an essential part of an elementary classroom not only to achieve key science learning goals, but also as a means to engage and motivate students as well as support literacy and mathematics learning. An overarching focus of the course is the idea that doing science entails individuals using wide-ranging ways of acting, reasoning, and communicating with others to figure out phenomena. Science is not about memorizing facts; rather, it is about constructing, debating, and revising multiple explanations and models about the natural world. With this in mind, this course is designed to offer you numerous opportunities to read literature that illustrates this vision and to engage and reflect upon this type of science teaching and learning.

EDUC220801**Educational Strategies: Children with Special Needs****Dunn, Lori A****Fall 2024**

This course provides instruction to pre-service teachers interested in learning more about instruction, curriculum, and teaching for children with special needs, with a framework highlighting important educational issues pertinent to their professional development and the realities of teaching. The course emphasizes the complexities of teaching children with individual learning profiles in inclusive settings. Students will examine educational readings and instructional practices through the lenses of curriculum, author voice, and academic tension. Class participants will develop a comprehensive understanding of the historical, legal, and political developments influencing current general and special education practices.

EDUC330801**Bilingualism in Schools and Communities****Paez, Mariela M****Fall 2024**

Earning the TELL Certificate requires the successful completion of the courses EDUC3308 and EDUC6346 (for elementary teaching) or 6347 (for secondary teaching). In addition, students must complete a field experience in a classroom that includes bilingual learners and/or English language learners. This course is also part of the Foundations in Education minor and the Immigration, Education, and Humanitarian Studies minor at Lynch. This course prepares students to participate in increasingly multilingual and multicultural environments in order to better serve bilingual students, families, and communities. Building on theory, research, and practice from the field of bilingualism, second language acquisition, and education, students will learn about the process of language and literacy development in children and adolescents who are exposed to more than one language, and the social and cultural contexts in which this development occurs. Through the use of case studies and school profiles, students will deepen their understanding of issues in bilingualism and bilingual education. Students will also have an opportunity to build cultural competence skills by learning about diverse communities in the U.S.

Practicum for Lynch School Students

Date, Danielle V; Ryan, Amy

Fall 2024

A semester-long, full-time, five day a week practicum experience designed to meet the Massachusetts Department of Elementary and Secondary Education's requirements for endorsement from Boston College. Students will be guided by a qualified school-based mentor (Supervising Practitioner) and a university-based mentor (Program Supervisor). In addition to registering for the course, students must complete the online application (<https://forms.gle/UZZ5PWRNGYgz7UpC9t>) during the semester preceding the placement by April 15 for fall placements and December 1 for spring placements. Contact the Office of Field Placement and Partnership Outreach at prac@bc.edu for more information. For Lynch School undergraduate students only; Department permission required after August/December 15.

Credits: 12

Room and Schedule: By Arrangement

Satisfies Core Requirement: None

Prerequisites: EDUC3153 or Approval by the Office of Field Placement, good academic standing (grade point average of 2.5 or higher), and successful completion of all pre-practicum teacher education requirements and courses.

EDUC610001**Partnering with Diverse Families and Communities in Early Childhood****Paez, Mariela M****Fall 2024**

This course is designed to help early childhood educators establish effective partnerships and reciprocal relationships with diverse families and communities. First, students will learn about models of family involvement and important family developmental processes in early childhood such as attachment, maternal responsiveness, and parenting styles. Second, we discuss important social, cultural, and linguistic characteristics which shape the life of families and children and are relevant for understanding diverse families. Third, we present strategies for supporting and working with diverse families through family, school, and community partnerships. At the end of this course, students will have developed an action plan for working with diverse families in early childhood settings including activities for: collecting and providing information, planning for family involvement in the classroom, establishing reciprocal relationships with families, and collaborating with communities.

Secondary and Middle School English Methods

Herrmann, Brian W

Fall 2024

Develops knowledge, skills, and dispositions essential for competent understanding, development, and delivery of effective English Language Arts instruction in a diverse classroom. Addresses educational and literary theory, pedagogy, assessment, evaluation, content, curriculum, media literacy, and sensitivity to and respect for adolescents who come from a variety of cultures, abilities, interests, and needs. Provides knowledge of local, state, and national standards and strategies to help students reach those standards. Encourages risk-taking, experimentation, flexibility, application of theory, and innovation. Good teaching demands open-mindedness, critical reading, writing, and thinking, honest reflection, high expectations, ongoing revision, and commitment to social justice.

Assessment of Students with Extensive Support Needs

Brennen, Amanda L

Fall 2024

Pre-practicum required (25 hours). This course addresses formal and informal assessment of students with intensive needs. Students will become familiar with assessments driven by both the developmental and functional paradigms. All assessment activities will be founded on the principle that appropriate assessment goes beyond the student to include consideration of the student's multiple contexts. This course also addresses the IEP, the legal mandates behind the process, and the collaborative role of the teacher, as part of the educational team, during the assessment and report writing processes.

Introduction to Speech and Language Disorders

Radville, Katherine Mary

Fall 2024

On the basis of the development of normal children, this course will explore dysfunctions of speech and language that interfere with normal communication and learning processes. The evaluation of language performance and the remediation of language deficits will also be stressed.

This course proposes theological, spiritual and pedagogical foundations for faith-based education, ministry and service. The course invites participants to develop their own theory and praxis of educating in faith, and to intentionally harness the faith formation potential of all functions of ministry and faith-based service. There is particular emphasis on religious education for a liberating faith that promotes the social values of God's reign - compassion and justice for all.

A History of The Jesuits

Colombo, Emanuele

Fall 2024

This is a Graduate-level on-line course.. For nearly five centuries, the Society of Jesus has been one of the most successful and, at times, most controversial religious orders in the Catholic Church. A History of the Jesuits offers an introductory survey to this rich and varied past with particular attention, following the Jesuits' suppression in 1773, to various enterprises and enterprisers in the Americas. The course seeks to answer these questions: What have been the characteristics of the Society of Jesus and its associated works? And how and why have those characteristics remained the same or changed? Complementing the other courses in the Certificate program, the course traces the development, expansion, suppression, restoration, and recent developments of the Society of Jesus by closely examining the historical contributions of significant Jesuits.

Models and Theories of Instructional Design

Moore, Meredith C

Fall 2024

Now well into the twenty-first century, schools struggle with the challenge of offering a high quality education for all learners regardless of race, family status, national origin, language, or ability. Increasingly, curriculum is accessed digitally and student work is generated and exhibited using technology tools. The once familiar artifacts of classrooms are rapidly giving way to radically new forms of teaching and learning. Within this context of change, this course reviews the evolution of theories of learning and instruction and then critically examines a range of contemporary models and theoretical frameworks. Learning activities in the course will allow participants to develop their own personalized framework for planning and implementing instruction.

Family and Community Engagement

Scanlan, Martin K

Fall 2024

The purpose of this course is to introduce participants to theories, practices, and empirical research regarding family and community engagement in schools. The focus is on how school leaders--formal and informal--enact organizational models, educational programs, and political strategies that increase authentic relationships with parents and community members. Topics of study will include community schools/full service schools, parent involvement models, involvement of diverse families, grassroots organizing for community development, afterschool and community-based education, and school board-community relations. Direct participation in inquiry into school-community activities conducted on-site in schools and neighborhoods will be requirement of the course.

Globalization, Mobility, and Education

Liu, Qinghua

Fall 2024

This course address political economic issues related to migration and education. Drawing on the anthropology of globalization and sociology of immigration, the course reviews major theories of immigrant incorporation and exclusion processes in schools, examines case studies of im/migrants, refugees, and displaced persons and their adaptation processes in countries in the Global North and the Global South, and considers educational practices and policies that develop to address mobility in diverse contexts. The course asks how cultural, social, political, and economic factors influence im/migrant incorporation, and how educators can facilitate im/migrant students' opportunities for learning through changes in policies, pedagogies, and curricula.

Language Learner in Global Perspective

Kim, Deoksoon

Fall 2024

This course provides an overview of language learning and the situation of second language learners in schools. First, we review processes of language learning and the challenges language learners face when they must simultaneously learn a language and learn subject matter in that language. We do this from a socialcultural perspective, exploring language learning as embedded in sociohistorically situated activities. We develop and account of how learning language is also learning culture. Second, we study how these processes vary across cultural contexts. Because language learning is woven into social and historical contexts, processes of language learning and schooling vary around the world. The course develops several case studies from different areas of the globe in order to illustrate how language learning and schooling can intersect in different ways.

Supervision in Action

Cownie, Charles T

Fall 2024

This course is designed as an introduction to research-based clinical supervision models in teacher education. Hands-on application-in action includes observational strategies, collaborative assessment logs, and summative reports as resources for ongoing data collection. Course participants acquire and then apply the Massachusetts Department of Education Pre-service Performance Assessment rubric for coaching and evaluating student teachers, integrating the BC Teacher Education themes that emphasize teaching for equity and social justice. This course is restricted to cooperating teachers in BC Partnership Schools who are supervising a BC student teacher in a full-time practica and to new BC Clinical Faculty.

Advanced Graduate Inquiry Seminar

Jacques, Mary

Fall 2024

This course is designed for the Lynch School Fifth Year Program students who have successfully completed a licensure program at Boston College. It is designed to build on teacher candidates' experiences with inquiry as stance and expand their skills in conducting classroom-based research that leads to pupil achievement and teaching for social justice in their new license area. The hybrid course is online with one class meeting. A case-study approach is used to help teacher candidates mediate the relationships of theory and practice, pose questions for inquiry, learn through reflection and discussion, learn from experiences with students and colleagues, construct critical perspectives about teaching, learning, and schooling, and to improve teaching and learning. The second part of this sequence is EDUC7432 which is taken in conjunction with full-time student teaching (EDUC7420).

Graduate Inquiry Seminar: Two

Higgins, Claire F

Fall 2024

Donovan Urban Scholars must enroll in EDUC432.08. The primary goal of this capstone seminar is to initiate teacher candidates into the practice of teacher research or collaborative inquiry for action. Collaborative Inquiry for Action is an ongoing, collaborative process of systematic and self-critical inquiry by educators about their own schools and classrooms in order to increase teachers' knowledge, improve students' learning, and contribute to social justice. This final project will be presented at a roundtable presentation at the end of the semester and also satisfies the M.Ed., MAT, MST Comprehensive Examination in Education EDUC8100.

This course focuses on questions about what curriculum is, its purpose in society, and how it functions as a social mechanism. In this course, the curriculum is understood to have multiple forms and meanings. It is aspirational (what one aspires to accomplish), technical (a designed artifact, like a textbook or plan, used as an instructional medium), and phenomenological (characterizing what learners experience or take away from their encounters with curriculum). After exploring the multiple meanings of curriculum, the course will then focus on the design and enactment of curriculum materials. In terms of design, we will examine different models of design as well as analyze curriculum materials from these perspectives. Finally, we will consider the curriculum enactment process in terms of different meanings and possibilities within k-12 school settings.

Educating Learners with Disabilities

Khurana, Aashna

Fall 2024

This course focuses on the education of students with disabilities and other learners from culturally and linguistically diverse backgrounds. The goal of the course is to promote access to the general curriculum for all students through participation in standards-based reform. Universal Design for Learning (UDL) provides the theoretical framework for this course. Through an examination of historical milestones, landmark legislation, systems for classification, approaches to intervention, and the daily life experiences of diverse learners, students acquire knowledge about diversity and the resources, services, and supports available for creating a more just society through education.

Transforming the Field of Catholic Education

Miller, Andrew F

Fall 2024

This course explores the history, purpose, current status, and possible futures of Catholic elementary and secondary schools. Students will become conversant with the body of scholarly literature, theoretical and empirical, that defines the field of Catholic education. Though the primary focus will be on Catholic schools in the United States, the course will explore how we can learn from the experience of other religiously affiliated schools here and abroad, and from the experience of Catholic educators worldwide. Special attention will be devoted to how the Ignatian spirituality and pedagogy can be a resource for educators in Jesuit and non-Jesuit schools.

Contemporary Issues: Classroom Ethnography

Beauchemin, Faythe P

Fall 2024

This course introduces Classroom Ethnography as a field of inquiry. Classroom ethnographers seek to make visible the particular social and cultural practices and processes of everyday life in classrooms. In this course, students will learn about theories and methodologies, select a topic and population for classroom ethnographic research, critically review the available literature on that topic and population, and identify a field site for research. This course provides a theoretical and methodological framework for research on classrooms in a situated context. In addition to texts that cover theory, methods, and central concepts of this field, other texts and readings provide examples of research carried out within this tradition.

Advanced Qualitative Research

Castro Samayoa, Andres

Fall 2024

Building upon the foundation concepts of qualitative research and initial exploration of an introductory course in qualitative methodologies, this course explores the theoretical, methodological, and analytic implications of conducting qualitative research from differing theoretical perspectives. Key readings include texts on social theory, qualitative methodologies, and exemplar qualitative research from various social scientific fields. Students will distinguish between methodology and methods, analyze data, and produce either a report for a specified audience or a research manuscript for possible submission to an educational research journal.

Teacher Education and Curriculum and Instruction
Courses: Spring 2025

EDUC103001**Child Development**

MacEvoy, Julie P

Spring 2025

This is one of two foundational courses (APSY 1030 & APSY 1031) focused on multiple dimensions of child development from the prenatal period through middle childhood, with a consideration of applications to educational and other applied settings. The course offers an overview of the array of research methods used in developmental psychology; normative trends in physical, social-emotional, and cognitive development; and factors and processes that affect developmental change and optimize child development. Key questions in the field of developmental psychology, such as "How do nature and nurture together shape development?" and "How do children become so different from one another?" will recur across topics to help students establish a coherent understanding of child development.

Credits: 3

Room and Schedule: Mcguinn Hall 121 TuTh 09:00AM-10:15AM

Satisfies Core Requirement: Social Science

Family, School, and Society

Dearing, Eric, Ph.D.

Spring 2025

This is one of two foundational courses APSY1030-APSY1031 that introduce students to the multiple dimensions of child development, and the place of education in promoting healthy development for all children. This course considers the social and cultural contexts that shape developmental and educational processes. Focuses on understanding the nature of contemporary social problems including racism, sexism, ethnic prejudice, poverty, and violence, as they affect children, families, and schooling. Emphasizes the special role of education in linking community resources for an integrated approach to serving children and families.

Learning and Curriculum in the Elementary School

Homza, Anne E

Spring 2025

Introduces students to the profession of education and roles of teachers. Provides understanding of contexts in which education is delivered in multicultural settings and opportunity to gain knowledge and experience about interpersonal, observational, and organization skills that underlie teaching. Faculty and students work together throughout course to examine students' commitment to and readiness for career as a teacher. Introduces essentials of curriculum, teaching, and managing classrooms at elementary (K-6) level and links them to major learning theories for children. Views curriculum, instruction, management, and learning theory from perspectives of current school reform movement and social/cultural changes affecting elementary classrooms and schools.

Teaching Language Arts

Proctor, Charles P

Spring 2025

Focuses on the teaching and learning of language arts in the elementary grades. Students will be exposed to theoretical approaches to both oral and written language development in addition to a wide variety of teaching methods. Students will have the opportunity to apply their learning through practical lesson development, and encouraged to reflect on their experiences via the theoretical perspectives highlighted in the course. Student diversity and its implications for teaching language arts will be an integral theme. Students will draw on their experiences in their prepractica to apply and reflect on learning as they mediate theory and practice.

Teaching Reading

Beauchemin, Faythe P

Spring 2025

This course is designed to offer preservice teachers theoretical and practical knowledge and experience into teaching literacy to elementary age students. Emphasis will be placed on the social, political, and cultural context of reading instruction. Students will gain understanding of major theoretical perspectives on literacy development and the myriad strategies for teaching reading in a variety of contexts. Students will also be expected to spend time in a context where they can gain experiences in providing reading instruction in a relevant and productive way.

Teaching the Social Sciences and the Arts

McKay, Tatisha

Spring 2025

Provides prospective elementary teachers with opportunities to develop social studies and arts curricula for elementary age students and consider a variety of instructional approaches appropriate for this age group. Students will learn how to develop the skills of an historian and select and integrate knowledge appropriate for diverse learners. Curricular topics include evaluating context-appropriate materials, developing critical thinking, using and critiquing primary sources in the classroom, and developing varied learning activities through the use of multiple media.

Teaching Mathematics and Technology

Keyes, Madeline

Spring 2025

This course presents methods and materials useful in teaching mathematics to elementary school children. It analyzes mathematics content and pedagogy from both conceptual and practical perspectives. Emphasis is placed on the interconnections among theory, procedures, and applications that form the framework on which specific mathematics lessons are constructed. It examines the elementary mathematics curriculum through technology resources, addressing the different ways in which technology can be used. Activities include laboratory experiences with concrete models and technology as well as inquiry into the role of the teacher in the school community in the epoch of teaching for social justice.

Teaching About the Natural World

Moore, Austin

Spring 2025

This course is designed to increase confidence, enthusiasm and knowledge for teaching elementary science. Science can be an essential part of an elementary classroom not only to achieve key science learning goals, but also as a means to engage and motivate students as well as support literacy and mathematics learning. An overarching focus of the course is the idea that doing science entails individuals using wide-ranging ways of acting, reasoning, and communicating with others to figure out phenomena. Science is not about memorizing facts; rather, it is about constructing, debating, and revising multiple explanations and models about the natural world. With this in mind, this course is designed to offer you numerous opportunities to read literature that illustrates this vision and to engage and reflect upon this type of science teaching and learning.

Undergraduate Inquiry Seminar: I

Date, Danielle V; Ryan, Amy

Spring 2025

The purpose of this seminar is to introduce and develop classroom-based inquiry skills in teacher candidates. Teachers develop a self-awareness about their personal beliefs and biases about teaching, learning, and pupils; explore, understand, and learn to navigate the various aspects of school culture; and learn to use their classroom as a research site by posing critical questions about pupil learning, consulting related research, gathering and analyzing data about their pupils and classrooms, attempting interventions, evaluating results, and documenting pupil learning.

Secondary Curriculum and Instruction

Thakurta, Ankhi

Spring 2025

Provides an introduction to secondary teaching practices as well as an overview of the history and structure of secondary schools. Topics include curriculum theory and development, interdisciplinary teaching, teaching students with diverse learning abilities, application of educational research, assessment, national standards, and alternative models for secondary schools. Focuses on the role of the teacher in secondary education reform. Taught on-site and in conjunction with secondary education teacher candidates' first prepracticum experience, this course offers a unique opportunity for a cohort experience in which preservice teachers work closely with each other, high school faculty, the instructor, and urban students.

EDUC330801**Bilingualism in Schools and Communities****Chen, Qihan****Spring 2025**

Earning the TELL Certificate requires the successful completion of the courses EDUC3308 and EDUC6346 (for elementary teaching) or 6347 (for secondary teaching). In addition, students must complete a field experience in a classroom that includes bilingual learners and/or English language learners. This course is also part of the Foundations in Education minor and the Immigration, Education, and Humanitarian Studies minor at Lynch. This course prepares students to participate in increasingly multilingual and multicultural environments in order to better serve bilingual students, families, and communities. Building on theory, research, and practice from the field of bilingualism, second language acquisition, and education, students will learn about the process of language and literacy development in children and adolescents who are exposed to more than one language, and the social and cultural contexts in which this development occurs. Through the use of case studies and school profiles, students will deepen their understanding of issues in bilingualism and bilingual education. Students will also have an opportunity to build cultural competence skills by learning about diverse communities in the U.S.

Develops knowledge of the reading process and how to "teach reading the content areas." Students will develop curriculum and instruction that integrates reading instruction in the content areas, addressing diverse learners. Involves understanding relationship among assessment, evaluation, and curriculum; learning what and how to teach based on student assessments; developing and providing scaffolded instruction that addresses reading comprehension and critical thinking; and integrating reading, writing, speaking, listening, and thinking into content curriculum. Also addresses how to help students comprehend non-printed text.

Inclusive Education Field Observation

Scanlon, David

Spring 2025

Open to undergraduate majors in the Morrissey College of Arts and Sciences, the Inclusive Education Minor is offered in the LSOE. The minor is designed to (1) introduce Morrissey College of Arts and Sciences students to the world of disabilities and special education with an emphasis on special education practice, and (2) enhance the ability of future professionals to meet the needs of increasingly diverse school populations. Classes address the nature and implications of disabilities and effective practices in special education. The minor consists of six-courses and a zero-credit field observation. Appropriate for those considering a career or further studies in education.

Art and Music in Early Childhood Education

Paez, Mariela M

Spring 2025

The main purpose of this course is to encourage early childhood educators to embrace the unique characteristics of young children's artistic and musical expression and appreciation of these experiences. By providing a foundational knowledge of young children's creative thinking and aesthetic development, the course will teach you how to apply effective pedagogical strategies in teaching art and music and how to integrate art and music across the early childhood curriculum. Students will learn how to bridge theory and practice through various readings, recorded lectures, and classroom examples. At the end of this course, you will be able to plan effective process-focused art and music lessons, use various materials and medium for artistic and musical expression, maximize the potential of your classroom resources, and use art and music to promote multiculturalism, diversity, and enhance family involvement.

Science Playing and Learning in the Early Childhood Classroom

Paez, Mariela M

Spring 2025

This course is designed to encourage and prepare early childhood educators for planning and implementing engaging and developmentally appropriate science learning experiences (Pre-K-2nd grade). An overarching focus of the course is instilling in students an appreciation for the wonder of science and the world around them. The course is divided into three science content areas: Earth and Space Sciences, Life Sciences, and Physical Sciences. Students will learn how to connect their teaching with new science, technology, and engineering standards. Through interactive activities and discussions including the review of video, science lessons, and research in science education, we will explore key elements and challenges of science teaching and provide a foundation for supporting science learning in the early childhood classroom.

Developmentally Appropriate Curriculum in Early Childhood Education

Cristello, Karen M

Spring 2025

This course focuses on the development and implementation of curriculum in early education. The Massachusetts Guidelines for Preschool Learning Experiences and the national standards for developmentally appropriate practices will be utilized throughout the semester. This course will highlight each of the curriculum domains (language/literacy, mathematics, science and technology, social studies, health, and the arts) while demonstrating how to build an integrated curriculum in an early childhood classroom. The importance and value of play in the early years will be emphasized, and strategies will be shared to help teacher candidates document student learning.

Teaching Bilingual Students

Homza, Anne E

Spring 2025

Summer course: Section .01 for Elementary Education majors; Section .02 for Secondary Ed majors In EDUC 6346 participants will learn instructional methods for bilingual, English as a Second Language (ESL), and mainstream Early Childhood and Elementary classrooms. This includes literacy and content area instructional approaches applicable to K-5 classrooms. Other topics include history and legislation related to English Learners and bilingual education as well as the influence of language and culture on students, instruction, curriculum, and assessment. This course combines theory, research, and practice to enable participants to develop the knowledge to work with students who function in more than one language and across cultures.

Classroom Management

Cass, Richard J

Spring 2025

ED201 is now EDUC6373.. Focuses on observation and description of learning behaviors, with emphasis on examining the relationship of teacher behavior and student motivation. Prepares teachers to analyze behavior in the context of a regular classroom setting that serves moderate special needs students and to select, organize, plan, and promote developmentally appropriate behavior management strategies that support positive learning. Also considers theoretical models of discipline and classroom management strategies, and requires students to propose and develop a rationale for selection of specific techniques for specific classroom behaviors.

Ed Implications/Sensory, Motor, and Health Impairments

Miller, Thomas

Spring 2025

This course addresses the impact of physical disabilities on learning. Emphasis is placed on the educational needs of children with cerebral palsy, visual impairment, or hearing loss in combination with intellectual disability. Basic anatomy of the eye and ear are covered along with the common causes of vision and hearing loss. This course prepares teachers to perform functional vision and hearing evaluations and to translate those findings into appropriate classroom accommodations and adaptations. Many children with disabilities have unmet sensory integration needs that influence their behavior and subsequent readiness to learn.

Teaching and Learning Strategies - Moderate Support Needs

Scanlon, David

Spring 2025

Not open to non-degree students. EDUC6589 is intended for general educators and EDUC6588 is required for special educators This course is intended to help prospective and experienced special education teachers and other educators a repertoire of skills for teaching students with mild/moderate (high incidence) educational disabilities. Participants will accomplish this goal by making connections among their knowledge of disabilities, special education policy and practices, assessments, education theory, and teaching methods. Students will learn how to develop, implement, and monitor individualized education programs, implement research-based effective intervention practices, and collaborate with others to meet the needs of special education students in inclusive and other educational settings. Successful students will have familiarity and competency with a variety of special education procedures and teaching approaches and specific practices. Appropriate for both elementary and secondary level education. Class sessions will routinely include time to practice skills being learned. Prerequisites EDUC7579

Teaching and Learning Strategies for Inclusive Education

Scanlon, David

Spring 2025

Designed primarily for elementary and secondary education teacher candidates and practicing educators, this course helps them develop an initial repertoire of skills for teaching students with educational disabilities. The primary emphasis of this course is on the education of students with high-incidence (mild/moderate) disabilities in inclusive classrooms. Participants will learn to develop comprehensive instructional plans fully inclusive of students with educational disabilities, utilized an IEP to guide instruction, develop accommodations and modifications appropriate to students and the curriculum, design individual, small, and large group instruction, and evaluate various service delivery options for educating students with disabilities.

Discernment and Prayer in the Spiritual Exercises of St. Ignatius

Geger, Barton T, SJ

Spring 2025

This is a Graduate level online course. . A study of the spiritual doctrine of St. Ignatius Loyola as articulated in the text of the Spiritual Exercises, but with reference to other texts such as Ignatius' Testament, letters, and the Constitutions of the Society of Jesus. The focus is how Ignatius' treatment of prayer, discernment of spirits, and discernment of God's will, work together to form a "contemplative in action."

Jesuit Pedagogy

Casalini, Cristiano

Spring 2025

This is an online course.. This three-credit, graduate-level online course examines the distinctiveness of the Jesuits' approaches to teaching and of their philosophy of education that have propelled their schools to unprecedented success over the centuries. One key to the unprecedented success of Jesuit education has been the tension between the recognizable mark of uniformity that long distinguished the methods, contents, and practices of Jesuit schools and their ability to adapt to different contexts and times. Both aspects-the uniformity and the adaptability-were explicitly supported by the "Ratio studiorum," the Jesuits' foundational plan of studies issued in 1599, which, despite the schools' many variations and complexities, has retained some influence over time. With the "Ratio" discarded, Jesuit schools had to clarify what made them distinctively Jesuit, reconciling their mission with the contemporary world. This three-credit, graduate-level class sketches the developments of Jesuit educational endeavors by focusing on both the permanent and changing traits of its distinctive pedagogy.

What Makes Education Catholic?

Groome, Thomas

Spring 2025

When a school presents itself to the world as offering Catholic education, it signals, at a minimum, that it is committed to educating from and for faith. It is to educate from deep spiritual convictions that are core to Catholicism and for a Transcendent as well as an immanent perspective on life, preparing students to live well into an Ultimate Horizon God as revealed in Jesus Christ. What does this ask of the curriculum of a Catholic school, of its faculty and administrators? We once took for granted our response to such questions, for example when 95% of faculty and staff were vowed religious and all students were decidedly Catholic. That era has passed, bringing new challenges and opportunities. Note, for example, the growing number of students from other or no faith tradition attending, likewise an often diverse faculty and staff, and many Catholic students who are more cultural than affiliated in their faith. This changed reality, coupled with the secular and postmodern culture of our time, offers new opportunity for a fresh address of what makes education Catholic.

Curriculum Theories, Practice, and Design

Fogelman, Sarah E

Spring 2025

The overarching objective for Curriculum Theories and Practice is to help course participants develop and clarify their philosophy of education, in particular, their beliefs regarding the purposes and processes of effective and equitable curricular organization. To do so, the class explores varied ways of conceptualizing a school curriculum, drawing on insights from major curriculum designers, both past and present, U.S. and international. So students appreciate the ever-evolving nature of effective teaching practices and related school curricula, they will assess their own experiences with educational and institutional change processes writ large. Aiming to help course participants to thrive in the current, volatile educational and political climate, students will consider various approaches to multicultural education, anti-racist education, and inclusion practices that aim to transform the curriculum, attending to the needs of all students and overtly promoting equitable outcomes. In doing so, students will enact alternative strategies for assessment that provide multiple and authentic measures of student learning. Ultimately the course intends to help students consider how school curricula can be structured to promote social justice.

Family and Community Engagement

Paez, Mariela M

Spring 2025

The purpose of this course is to introduce participants to theories, practices, and empirical research regarding family and community engagement in schools. The focus is on how school leaders--formal and informal--enact organizational models, educational programs, and political strategies that increase authentic relationships with parents and community members. Topics of study will include community schools/full service schools, parent involvement models, involvement of diverse families, grassroots organizing for community development, afterschool and community-based education, and school board-community relations. Direct participation in inquiry into school-community activities conducted on-site in schools and neighborhoods will be requirement of the course.

Preparing the Whole Person for Global Citizenship

Perry, Shayna

Spring 2025

This course is for graduate students and upper-level undergraduates who are interested in the fields of education and psychology. The course will focus on the development of individuals and their role as global citizens. We will explore the whole person development of adolescents and emerging adults in the digital age--one marked by a participatory culture. We explore these questions while foregrounding the different strategies and methodologies of counseling, developmental, and educational psychology.

Applied Linguistics

Yatsu, Kei

Spring 2025

This course provides an introduction to the construction and use of languages, focusing on language structure (morphology, phonetics, phonology, syntax, and semantics), language use (discourse, pragmatics, and language variation), applied linguistics (L1 and L2), and English grammar. Students learn English as compared with other languages, exploring the grammatical categories and processes. A wide range of essential topics are covered in the course, including grammar, syntax, semantics, sociolinguistic pragmatics (ex. body language), dialects, and computational linguistics. This course provides a solid foundation for future and current TESOL educators, language teachers, language learners, as well as those pursuing advanced linguistics courses. There is no prerequisite or assumption of previous knowledge of linguistics for this course.

Graduate Inquiry Seminar: One

Fogelman, Sarah E

Spring 2025

The course will coincide with the pre-practicum experience. It is designed to introduce teacher candidates to inquiry as stance and the skills necessary to conduct classroom-based research that leads to pupil achievement and teaching for social justice. The course is designed to help teacher candidates mediate the relationships of theory and practice, pose questions for inquiry, learn through reflection and discussion, learn from their students and colleagues, construct critical perspectives about teaching, learning, and schooling, and to improve teaching and learning. The second part of this sequence is 432 which is taken in conjunction with full-time student teaching (EDUC7420). Students who have successfully completed EDUC4231, Senior Inquiry, as part of their undergraduate teacher licensure program at LSEHD are recommended to take EDUC 7430 Advanced Graduate Inquiry Seminar

This course focuses on questions about what curriculum is, its purpose in society, and how it functions as a social mechanism. In this course, the curriculum is understood to have multiple forms and meanings. It is aspirational (what one aspires to accomplish), technical (a designed artifact, like a textbook or plan, used as an instructional medium), and phenomenological (characterizing what learners experience or take away from their encounters with curriculum). After exploring the multiple meanings of curriculum, the course will then focus on the design and enactment of curriculum materials. In terms of design, we will examine different models of design as well as analyze curriculum materials from these perspectives. Finally, we will consider the curriculum enactment process in terms of different meanings and possibilities within k-12 school settings.

Educating Learners with Disabilities

Colombino, Jason

Spring 2025

This course focuses on the education of students with disabilities and other learners from culturally and linguistically diverse backgrounds. The goal of the course is to promote access to the general curriculum for all students through participation in standards-based reform. Universal Design for Learning (UDL) provides the theoretical framework for this course. Through an examination of historical milestones, landmark legislation, systems for classification, approaches to intervention, and the daily life experiences of diverse learners, students acquire knowledge about diversity and the resources, services, and supports available for creating a more just society through education.

Clinical Experience

Date, Danielle V;Ryan, Amy

Spring 2025

A semester-long, full-time, five day a week practicum experience for graduate students seeking endorsement as a Teacher of Students with Moderate Disabilities or a Teacher of Students with Severe Disabilities. The course is designed to meet the Massachusetts Department of Elementary and Secondary Educations requirements for endorsement from Boston College. Students will be guided by a qualified school-based mentor (Supervising Practitioner) and a university-based mentor (Program Supervisor).In addition to registering for the course, students must complete the online application (<https://forms.gle/UZZ5PWRNGYgz7UpC9t>) during the semester preceding the placement by April 15 for fall placements and December 1 for spring placements.Contact the Office of Field Placement and Partnership Outreach at prac@bc.edu for more information.

Credits: 3

Room and Schedule: By Arrangement

Satisfies Core Requirement: None

Prerequisites: EDUC7429 or Department permission required after August/December 15. EDUC7429 and approval by the Office of Field Placement, good academic standing, and successful completion of all pre-practicum teacher education requirements and courses.

EDUC761601**Bilingual Literacy and Literature****Proctor, Charles P****Spring 2025**

This course is designed to provide pre-and in-service practitioners exposure to contemporary issues, perspectives, and approaches for literacy instruction in bilingual education settings. These bilingual education settings include transitional and dual language bilingual education programs, and we will explore literacy instruction as it pertains within and across these different program models. The course targets a range of literacy related topics all designed to orient the bilingual educator toward bilingual literacy instruction in contemporary bilingual education contexts.

Explores first and second language and literacy development of children raised bilingually as well as students acquiring a second language during pre-school, elementary, or secondary school years. Also addresses theories of first and second language acquisition, literacy development in the second language, and factors affecting second language and literacy learning. Participants will assess the development of one aspect of language or language skill of a bilingual individual and draw implications for instruction, parent involvement, and policy. This course is fully online. The course will have biweekly synchronous meetings. The course meeting time will be determined at the first session by consulting with all students. The first session will be on September 4 (Thursday) at 9:00 AM.

Critical Race Theory and Intersectionality

Muniz Castro, Raquel

Spring 2025

This doctoral course explores the epistemological, methodological, and pedagogical uses of Critical Race Theory, Intersectionality (CRT/Int), and Settler Colonialism, in the examination and deconstruction of institutionalized and race-based disparities and inequalities in societal institutions, including, but not limited to, K-12 education, higher education, psychology, and the law. Course texts and student work will utilize both academic and popular culture texts. The course assumes and builds upon a foundational knowledge of social theories, and the ways in which self, institution and society are connected.

Discourse Analysis

Bottema-Beutel, Kristen M

Spring 2025

Discourse analysis (DA) is a broad field of research which incorporates theory and method from linguistics, anthropology, and sociology, among other disciplines. The common thread across these areas of scholarship is a commitment to studying language in action; to understanding what people do and mean with language, how people interact with language, and what people come to expect with language. Close analysis of language in context can illuminate the processes through which social constructs such as identity, power, and social selves are built. This course will cover the theoretical foundations of DA, in tandem with the methodological implications of each theory. Topics will include Speech Act theory, sequence organization and Conversation Analysis, Narrative Analysis, Classroom Discourse and Critical Discourse Analysis. The course will place an especial focus on the contributions of discourse analytic approaches to understanding educational contexts. Students will be asked to collect, transcribe, analyze, and present their own data over the course of the semester.

Dissertation Seminar in Curriculum and Instruction

Bottema-Beutel, Kristen M

Spring 2025

This is a student-centered seminar that is aimed at assisting doctoral students in identifying, shaping, and defining a research topic. Students will be expected to develop an Intent to Propose a Thesis, and to work toward the development of a full-scale draft of a Thesis proposal. Prior to the completion of the seminar, students will be expected to have established a Dissertation Committee.

African and African Diaspora Studies Courses: Fall 2024

AADS110401

African American History I

Conner, Mycah

Fall 2024

Fulfills the U.S. History requirement for History Majors. This course introduces undergraduates to African American history from the Middle Passage to the Civil War. Lectures, readings, and class discussions will call on students to analyze central topics in the field, including the meanings of African ancestry, shifting identifications, and the creation of a people; the intertwining of slavery and freedom in the colonial period; everyday life in the early republic; continuities and discontinuities in battles for freedom; and political organizing and resistance. Through a consideration of intellectual, labor, political, and social histories, the course invites students to examine and reinterpret narratives of black history "from slavery to freedom."

Introduction to African Diaspora Studies

Summers, Martin A

Fall 2024

A survey of the African continent and the Diaspora that would include geography, history, politics, economics and literature. The purpose of the course is to introduce students to specific historical, cultural, social and political topics related to Africa and the African Diaspora. Because the scope of the course is so vast, we will explore important issues and themes to give students a desire to further pursue more specific classes in African and African Diaspora Studies. Boston College faculty members will be invited to lecture in their area of expertise specific to Africa and the Diaspora throughout the semester.

When Gods Begin Again: Intro to African and African Diaspora Religions

McElwaine, Michelle L

Fall 2024

This introductory course examines Indigenous African and African Diaspora religions from an interdisciplinary perspective. We explore Yorùbá and other African religions, along with African Christianity, Islam, Haitian Vodou, Cuban Santería, Brazilian Candomblé, Sango Baptist of Trinidad and Tobago, Rastafari and Obeah of Jamaica, Black American conjure, and Oyotunji Village. Important themes of religions in Africa and the Afro-Atlantic Diaspora are addressed, such as: the veneration of God(s), Spirit(s), Ancestors, and the natural world; divination, initiation, sacred space, and healing; the impact of slavery on conversion and continuity; fetish as a colonial construct; globalization, race, gender, and power. Ultimately, this course encourages students to reevaluate their understanding of Africana religions, recognize diverse cultural practices and ritual knowledge systems, and engage with oral, written and audio/visual texts that underscore the values of these traditions.

Introduction to African-American Society

McGuffey, Clifton S

Fall 2024

To get Sociology credit for the major or minor, you must register for SOCY1043 rather than cross-listed course. In 1896, distinguished scholar W.E.B. DuBois became convinced that the experience of Africans in the Americas was so distinctive that it was imperative to study Black people in order to understand power dynamics at all levels of society. This course will study those power dynamics. While paying particular attention to the many ways that racial power dynamics have impacted all people of African descent in the United States, this course does not assume a uniform Black experience. We shall see that gender, class, and sexuality greatly shape the differing experiences of African-Americans.

Gospel Music Workshop

Jacob Dorman, Shannon D

Fall 2024

This class will examine Black gospel music with an emphasis on choral music and oral traditions that capture the Black experience in America from a historical, socio-political and multicultural standpoint. The syllabus and repertoire is reflective of the great faith tradition that is an integral part of black culture; in that it includes the breadth of musical expression in the Black worship experience. Students will analyze the importance of Black gospel music and its vital role in shaping global music trends. Spirituals, traditional gospel, contemporary gospel, as well as religious music of the European tradition will be reviewed closely from a historical and musical standpoint. The class will comprise of equal parts lecture and practicum (Voices of Imani Gospel Choir). The latter half compromising of the practicum (VOI) will help students engage in practical learning of songs explored in the lecture, consequently accomplishing the age-old institution of oral tradition in Black history.

Black Popular Culture

Madenga, Florence

Fall 2024

This course may be used to satisfy one of four electives required within the Communication major. In this class, we will critically examine the development of black popular culture from blackface minstrelsy in the 1800s to present day. While we will primarily focus on black popular culture in the United States, we will also consider the work of diasporic authors and artists and the international implications of American media. Readings will draw upon theories and concepts in media studies, cultural studies, and rhetoric to center our discussion of black popular cultural texts such as television shows, films, music, poetry, and fashion.

AADS219901

Introduction to Caribbean Writers

Frederick, Rhonda

Fall 2024

The Caribbean, merely viewed through the lens of colonial history, often does not reflect the diversity and complexity of the region. From a colonial perspective, therefore, the Caribbean is both "known" and "unknown." Our work for this course compares and contrasts versions of the region by examining colonial histories and current literary traditions. We will pay particular attention to the ways oppositional cultures and identifies manifest in Caribbean literature. Themes of this course include: colonialism, History/histories, gender, geography ation, sexuality, class, and culture. Varied texts and media will assist in our interpretations of the Caribbean and its diaspora.

Music and Social Justice

Jacob Dorman, Shannon D

Fall 2024

This course examines influential musicians and their artistic endeavors towards the path of social justice, education and awareness, with a special focus on African American musicians and their contribution to the world of entertainment. Emphasis will also be on social movements, activism, industry commodity and the direct correlation between music and society. Students will be encouraged to analyze music through lyrics, and song form; while understanding the historical, political and social climates surrounding these artistic ventures. The conclusive expectation of this class is that students understand the significant impact of music on a global scale and be mindful that it is a powerful tool that can be utilized to educate, inspire, create awareness and unite humanity.

Women in Blues

Jacob Dorman, Shannon D

Fall 2024

This course explores women in music from Vaudeville blues of the late 1800's, blues queens of the 1920's through contemporary blues artists such as Shamekia Copeland, Adele, Beyonce and Nicki Minaj. We will have mindful and empathetic conversations based on culture, race and perspective. The outcome of this class is that students have a thorough understanding of the legacy of blues music, the women who were at the forefront of the genre and the impact of blues on a worldwide audience.

Ifa: an Indigenous African Literary & Divinatory Tradition

Abimbola, Michelle Ajisebo Mcelwaine

Fall 2024

This course dives into the sacred oral literature of an Indigenous West African thought system known as Ifa. We will explore the structure of the verses and the divinities who feature there. An in-depth reading of several stories will provide cultural context for major themes such as the concepts of personhood and character, predestination, the role of women, and respect for nature. We will also discuss four divination systems that arise out of Ifa.

African Politics

Honig, Lauren

Fall 2024

This course examines key questions and debates in the study of politics in Africa. Why and when is ethnicity salient in elections? If state boundaries in Africa are largely colonial creations, why are they so resilient? Why are some countries more prone to civil war? What is the relationship between elections and democracy? How do historical legacies impact contemporary politics? The goal of this course is to provide students with analytical tools to understand a number of questions that are of interest to contemporary politics in Africa. Using the methodologies of comparative politics, we will examine both broad cross-national patterns and focused case studies in this class.

State Building and Conflict in Africa

Woldegebriel, Mesfin

Fall 2024

This course is about the relationship between political violence and state-building in Africa. The first four weeks provide background topics such as war and state formation in pre-colonial Africa and the dynamics of colonial conquest. The core themes will follow in the following four weeks, including the onset, intensity, and termination of civil war in post-colonial Africa. The last four weeks explore patterns of conflict and state-building in individual African countries. Beyond the descriptive goals, the course significantly emphasizes explaining issues. Thus, students should not only develop an understanding of what patterns of conflict and state-building in post-colonial Africa look like but also engage in a range of competing academic theories designed to describe and explain the patterns. Students can also critically weigh available evidence in developing their original understanding.

Black and Popular: Speculative Fictions by Black Writers

Frederick, Rhonda

Fall 2024

This course asks: what do discussions of contemporary social issues look like when depicted in popular literatures written by writers of African descent? What is the benefit of fictionalizing these issues in genre literatures? Students address these questions by examining the forms of "speculative fictions" (specifically thriller, science fiction/fantasy, and mystery/detective) as well as urban romance to determine how each represents concerns of twentieth/twenty-first century black peoples in the U.S., Canada, Jamaica, and Martinique. Our focus on these genres' explorations of race, class, culture, incest, social engineering, and intimate relationships is complemented by socio-historical studies of these issues and countries.

Introduction to African American Literature

Curseen, Allison S

Fall 2024

This course surveys African American literature from its early-American beginnings to its present. While different semesters may organize around different motifs, the course endeavors to introduce students to a variety of key periods, players, themes, and conventions in African American literature. In addition to foregrounding a range of literary genres, the course will also highlight other types of relevant historical and cultural texts (ex. music, art, newspaper articles, etc.). The purpose of doing so is to emphasize African American literature as interdisciplinary and inseparable from the history and culture of both a dynamic black diaspora and a diverse and complicated America.

Global Black French Studies

Semley, Lorelle

Fall 2024

Since the era of the Atlantic slave trade, people of color in France's colonies spanning Africa, the Americas, and Asia have challenged what it has meant to be a part of and apart from French imaginings of nation and empire. Focusing on historical documents, memoirs, and visual media featuring people of African descent primarily in the Americas (including the Caribbean) and Africa (including North Africa), this course examines how the sociopolitical activity, artistic creation, and intellectual work by women and men from these regions have transformed France and a wider world. Fulfills the LAMA requirement for History Majors and Minors. Fulfills the PSI and BAC requirements for AADS Majors and BAC requirements for AADS Minors.

Uganda and the World: Literature, Culture, and History

Kahyana, Sylvester Danson

Fall 2024

This course examines the literature, and culture of Uganda, a nation whose rich history and cultural production offer a lens through which to explore contemporary global issues. We examine Uganda's interactions with the world with an emphasis on her contribution to world 'projects' (for distance, refugee crises and the war against terror) and debates (for instance, local approaches to combating epidemics, postcoloniality/decoloniality, and sexualities). We shall also examine global imaginaries of Uganda, her responses to these imaginaries, and the evolution and experiences of the Ugandan diaspora. Finally, we will think together about the challenges of discussing Uganda in the global context. The course will deploy a range of approaches and assignments, such as lectures, guest lectures by famous Ugandans and Ugandanists, exhibitions, and projects.

Food Justice Across the African Diaspora

Best, Latrica E

Fall 2024

This course is designed to introduce students to the social, political and cultural meanings of food across the African Diaspora. We will cover not only the meaning of food but also the importance of race in key aspects of global food systems, from food production and processing to the distribution and consumption of food. This course will also explore food access and security and the ways in which intersecting identities make meaning, experience, and respond to such issues. By the end of this course, students will be able to apply relevant frameworks, namely environmental justice, to food-related dilemmas globally.

AADS422801

The Dynamics of West African Politics

Ngimbous, Jacques M

Fall 2024

What are the causes behind the military coups that took place in four West African countries within the past three years? Why have elections not been successful in granting legitimacy to several Sahelian nations? Is there a correlation between institutional weaknesses, trends in collective identities, and strategies used by interest groups that have triggered political violence? This course aims to analyze and propose plausible answers to these questions. The purpose is to provide a framework that could assist in comprehending the political sociology of Francophone West Africa and aid in the pursuit of stable states. This main focus is on the domestic politics of Francophone countries in West Africa from a comparative perspective. Various topics that will be examined include: 'ethnic violence', 'political crises', 'spiritual insecurity', 'hybrid political esotericism', 'military coups', 'contested elections' and 'endemic corruption--all of which are prominent issues within the West African political sphere. International actors, factors, organizations, and parameters are considered only insofar as they are relevant to local politics and are crucial for the understanding of the primary political dynamics of West Africa.

When Gods Begin Again: Intro to African and African Diaspora Religions

Abimbola, Michelle Ajisebo Mcelwaine

Spring 2025

This introductory course examines Indigenous African and African Diaspora religions from an interdisciplinary perspective. We explore Yorùbá and other African religions, along with African Christianity, Islam, Haitian Vodou, Cuban Santería, Brazilian Candomblé, Sango Baptist of Trinidad and Tobago, Rastafari and Obeah of Jamaica, Black American conjure, and Oyotunji Village. Important themes of religions in Africa and the Afro-Atlantic Diaspora are addressed, such as: the veneration of God(s), Spirit(s), Ancestors, and the natural world; divination, initiation, sacred space, and healing; the impact of slavery on conversion and continuity; fetish as a colonial construct; globalization, race, gender, and power. Ultimately, this course encourages students to reevaluate their understanding of Africana religions, recognize diverse cultural practices and ritual knowledge systems, and engage with oral, written and audio/visual texts that underscore the values of these traditions.

Introduction to African-American Society

McGuffey, Clifton S

Spring 2025

To get Sociology credit for the major or minor, you must register for SOCY1043 rather than cross-listed course. In 1896, distinguished scholar W.E.B. DuBois became convinced that the experience of Africans in the Americas was so distinctive that it was imperative to study Black people in order to understand power dynamics at all levels of society. This course will study those power dynamics. While paying particular attention to the many ways that racial power dynamics have impacted all people of African descent in the United States, this course does not assume a uniform Black experience. We shall see that gender, class, and sexuality greatly shape the differing experiences of African-Americans.

Gospel Music Workshop

Jacob Dorman, Shannon D

Spring 2025

This class will examine Black gospel music with an emphasis on choral music and oral traditions that capture the Black experience in America from a historical, socio-political and multicultural standpoint. The syllabus and repertoire is reflective of the great faith tradition that is an integral part of black culture; in that it includes the breadth of musical expression in the Black worship experience. Students will analyze the importance of Black gospel music and its vital role in shaping global music trends. Spirituals, traditional gospel, contemporary gospel, as well as religious music of the European tradition will be reviewed closely from a historical and musical standpoint. The class will comprise of equal parts lecture and practicum (Voices of Imani Gospel Choir). The latter half comprising of the practicum (VOI) will help students engage in practical learning of songs explored in the lecture, consequently accomplishing the age-old institution of oral tradition in Black history.

Black Deutschland: Germany and the African Diaspora

Holt, Alexander

Spring 2025

Though Germany has long conceived of itself as a white nation, it has been a temporary and permanent home for people of African descent since the Middle Ages. And white Germanophone authors from Franz Kafka to Gnter Grass have celebrated and appropriated elements of Black popular culture in their work. Focusing on the period between 1945 and the present day, this course will treat the contemporary legacies of German colonialism, transformations of discussions about race and racism following World War II and the Holocaust, and conceptions of multiculturalism and Europeanism. East German homages to Black activists and political leaders like Angela Davis and Nelson Mandela and West German claims of the utopic potential of African American culture will provide material for discussions of internationalist solidarity and cultural appropriation. Moreover, students will engage with the works of Black German and Afro-German writers and artists who critique Germanys self-conception as white, as well as texts by thinkers from the African diaspora (e.g., W.E.B. Du Bois and Audre Lorde) for whom experiences in Germany served as sources of intellectual and artistic stimulation.

The Underground Press

Ards, Angela

Spring 2025

Note to Journalism minors: this course satisfies the requirement for an elective with a "critical" orientation. Note to all students: This course is included in CORE - Engaging Differences and Justice. The underground press was a vast network of loosely affiliated newspapers that emerged in the 1950s and 60s when young people asked very hard questions about the meaning of power and the role of the press. The outsider outlets spread through hundreds of communities throughout the nation, ranging from big city weeklies like "The Village Voice" and the Berkeley "Barb" to specialized periodicals representing the Black press, as well as other ethnic newspapers, progressive weeklies, and various conservative perspectives. This course examines the factors that helped pave the way for this journalism of dissent and how this history affects alternative media today.

Health Psychology: Foundations for a Culture of Health Equity

Louis, Kengthsagn

Spring 2025

Health psychology examines how to promote and maintain health, prevent and treat illness, identify the causes and diagnostic correlates of health and illness, and improve health care systems and policy. This course provides an overview of major concepts and questions in the field, combining classic and contemporary research with a critical examination of psychological theories applied to health and illness. Through reading, lectures, and interactive discussions, students will critically examine various psychological and social influences on health such as identity, behaviors, beliefs, relationships, motivation, environment, and culture. For example, students will explore topics such as health behavior change, determinants of health, the evolving patient-provider relationship, the impact of racism on health, the role of self and social control for health, and the intersection of health motivation with identity. It also examines how health psychology can help promote a more equitable health culture by improving our understanding of how to address issues such as racial and ethnic healthcare disparities.

Introduction to Caribbean Art

Brown, Justin M

Spring 2025

This course offers a survey of Caribbean art from the precolonial period to the modern day. It traces the regions artistic developments across a period of over 500 years, from the art of the earliest inhabitants; through the artistic expressions of enslaved Africans; to the modern art movements of the 20th century. While serving as an introduction to the diverse artistic traditions of the Caribbean, this course also introduces fundamental methods in art history: close looking, formal analysis, visual description, and critical interpretation.

Identity, Culture, and Conflict Resolution Practices in Africa

Woldegebriel, Mesfin

Spring 2025

The course introduces conflict resolution practices in Africa. It examines the causes of conflicts, the types of disputes, the political economy, the actors, and their relationships to identity and cultural differences. It explores conceptions of identity and cultural differences in Africa, traditional approaches to conflict resolution and modern peace management and resolution techniques, transitional justice, and post-conflict reconstruction. It examines several theories of peace and conflict and case studies from all regions of Africa to develop original insights for the students. Ultimately, students not only understand the causes of conflict and conflict resolution approaches in Africa are not homogenous to all countries but should also explain the conflicts in their way.

African Political Parties

Ngimbous, Jacques M

Spring 2025

The origin of political parties is inextricably linked to the colonial era. Parties were either created as instruments of colonial rule or arose as organized means of resistance to colonial power. This colonial legacy still affects the behavior and role of political parties a half-century after independence. What are the distinctive features of African political parties both across the continent and with other continents? To answer this question, the course is divided into three sections: (1) the pivotal moments in the rise of political parties in modern world politics; (2) an overview of the distinctive characteristics of African political parties in general; and (3) a focused examination of West African political parties in particular.

Africa in International Politics

Woldegebriel, Mesfin

Spring 2025

This course is an introduction to the international relations of post-colonial Africa. It includes the global politics of pre-colonial Africa, the dynamics of colonialism, and the international relations of de-colonization as background topics. Moreover, the course will examine the politics of post-independence international alignments, the external causes and effects of authoritarian rule, and Africa's role in the global political economy. It concludes by reviewing pressing issues, such as state failure, the "war on terror", China's growing economic and political footprint, and African multilateralism. Students will understand the patterns of international relations in post-colonial Africa and explain and critically weigh available evidence using a range of theories to build their original insights.

Black Church Black Protest

Adkins, Amey

Spring 2025

"This ain't yo mama's civil rights movement." Then whose is it, what fuels it, and why? Taking the urgency of the #blacklivesmatter movement as a point of departure, this course considers the theological premise and political role of the "Black Church" in U.S. social movements for liberation. From the slave rebellions of the antebellum South to the religious icons of the Civil Rights Movement, this course focuses on reading and writing that centers African American religious experience--as well as understandings of morality, power, intersectional identity, and leadership--to contextualize the moral investments along the continuum of movements for black lives.

Sex and Society in African History

Semley, Lorelle

Spring 2025

Fulfills LAMA requirement for History Majors and Minors. Common images of African women and men paint a confusing picture. Sometimes African women are portrayed as vulnerable and in need. In other examples, African women are seen as bold and innovative in a changing African landscape. Gender histories elucidate the African past and present in new ways. Key themes include enslavement, state-building, colonialism, nationalism, apartheid, and democratization. Theoretical pieces, interviews, memoir, fiction, and film cover the major regions of the continent. Moving beyond simple stereotypes in African contexts helps us think differently about relationships between people and society, more globally.

Racialized Medicine

Best, Latrica E

Spring 2025

This course is designed to introduce students to sociological and other interdisciplinary approaches to how race and racism are defined, employed, and contextualized in health and medicine. Though we will cover an array of theoretical perspectives regarding race and its impact on health, the core theoretical underpinnings of this course are rooted in the racialization process. The contemporary readings address four themes: theoretical and methodological perspectives of race, racism, and health, social processes and the racialization of health, health inequities across the life course, and institutional pursuits of health equity. We examine the importance of intersecting identities throughout the course.

Psychology of Colorism and Anti-Black Racism

Bart-Plange, Diane-Jo

Spring 2025

This course will examine how individual, institutional, and structural level factors reproduce and reinforce white supremacy. Specifically, we will investigate anti-Black racism and colorism as it functions as a facet of white supremacy in three major areas: (1) the historical and social context of anti-Black racism and colorism, (2) how this context and systemic factors (such as predominant cultural narratives, privilege disparities) inform individual level biases and psychological processes, and (3) in turn, how these factors impact individuals across the African Diaspora. We will discuss anti-racist strategies to achieve equity and justice across the Diaspora.

Black Memoir Matters

Ards, Angela

Spring 2025

This course explores what an engagement with life writing by black Americans teaches us about the United States and its quest for democracy. We will situate contemporary writers within a larger literary tradition, beginning with James Baldwin's *The Fire Next Time*, a quintessential civil rights movement text, followed by *Between the World & Me* by Ta-Nehisi Coates, whom Nobel laureate Toni Morrison called the Baldwin of the Black Lives Matter era. We will also consider how various forms of memoir--as open letter (Imani Perry's *Breathe* and Kiese Laymon's *Heavy*), as interconnected essays (Emily Bernard's *Black Is the Body*), as literary criticism (Farah Jasmine Griffin's *Read Until You Understand*) meditate upon fundamental questions of citizenship, truth-telling, and fullest human blossoming. Note: Students who have taken the Seminar version of this course (ENGL 6036) may not take this version of the course.

Black Transnational Feminism

Everson, Ashley Nicole

Spring 2025

This is a discussion-based, seminar-style course on the methodological and theoretical approaches to interpreting the significance of race, gender, sexuality, and nation in the rich literature on Black transnationalism. The course will explore how Black feminist thought has informed the development of the field, placing special emphasis on foundational and emergent scholarship. The course underscores the varied ways Black feminist scholarship has been crucial for understanding the complex dynamics of Black internationalist thought and praxis. The readings for this course are a combination of primary and secondary sources that reflect the geographical and cultural breadth of the African Diaspora.

Visions of Freedom: African Decolonization and its Afterlives

Martin, Yasmina

Spring 2025

This seminar is an introduction to the history of decolonization in Africa. We will study the underpinnings of anti-colonial thought particularly Pan-Africanism, Garveyism, and African nationalism before engaging with the historical process of decolonization on the continent focusing on southern and eastern Africa. 1960 is remembered as the "year of Africa," the year when seventeen African nations won their independence. The years after 1960 brought a tumult of activity for the continent as independence movements and newly free nations dealt with the traumas of the past and the continuing struggles of the contemporary period. Moving thematically, we will analyze the different visions of freedom held by leaders of newly independent nations and of liberation movements, to discuss these and other critical questions: How did nations take part in a wider cultural and political Third World? What role would women and families be expected to play in developing new nations? And, how can histories of decolonization inform contemporary African realities?

Seminar: Race, Place, and Black Atlanta

Curseen, Allison S

Spring 2025

From Booker T. Washington and W.E.B. Du Bois to OutKast and Donald Glover's hit series, Atlanta is an enduring geographic/political site of black cultural imagining. Nevertheless the city often receives second or third billing in courses examining black literary and cultural production. While acknowledging the networks between Atlanta and more frequently highlighted places like New York and Paris, this course posits Atlanta as a rich geographic, cultural, and political site from which we can trace, if not also reimagine, a history of reading the complex relationship between race and blackness in the U.S. Paying particular attention to issues of gender, body, and mobility, the course will foreground a diversity of texts across mediums, genre, and time. This class is designed as a hybrid graduate/undergraduate course. To that end it will include different tracks for the final project. Students taking the course at the graduate level will be responsible for composing at least one position paper based on a critical secondary text and facilitating a class discussion around that paper. Fulfills BOTH the Seminar and the Race, Blackness, and Language requirements for English majors.

Senior Seminar: Theorizing the Diaspora

Curseen, Allison S

Spring 2025

This course explores the discourses of diaspora by taking into account the origins, various meanings, multiple dimensions, cultural iterations, and restrictive limitations of the term. How does "the practice of diaspora" translate in different forms of cultural work such as music, film, and literature? How has diaspora shifted in the age of globalization? How can we use diaspora as an analytical tool for reading from a critical perspective? We will consider closely how diaspora is theorized, practiced, and represented in various forms of cultural production. Therefore we will be taking an interdisciplinary approach reading across genre, medium, and disciplines.

Early American Art

Anderson, Asher

Summer 2024

In this course we will look at art and visual culture made in what is now the United States from ancient times to around 1800. We will consider visual material representing diverse experiences, including Native American art before and after contact with Europeans; depictions of early European settlements; and art, architecture, and material culture from the colonial, Revolutionary, and early national periods.

Throughout, we will ask what it means to be American both in the past and in our own time. As much as possible, both independently and as a group, we will study works of art in person at the Museum of Fine Arts, Boston, the Peabody Essex Museum, and elsewhere.

Spanish Art History: From Al-Andalus to Picasso

Henry, Brodie; Pelaez, Ana

Summer 2024

This course offers students a visual journey through the history of Spanish art, through the study and analysis of some of the most important works and artists, from the Islamic Art in Al-Andalus during the Middle Ages to present-day works. In each of the major eras, focus will be placed on the most outstanding artistic movements, especially on the painters that have played an essential role in bringing universal recognition to Spanish art. The course will be divided into two components--a theoretical and a practical part. The latter will be taught in the form of lectures offered at the classroom, and the former will consist of virtual cultural study activities, which will include virtual visits to some of the main monuments of the city of Toledo (Gothic Cathedral, Mosque of Bab-al Mardum, and the Toledo Synagogue) and Málaga (Picasso and Pompidou Museums); study of specific works of art at the National Archeological, Prado, Reina Sofia, Sorolla, and the Thyseen museum.

Postwar: Art After 1945

Lotery, Kevin

Fall 2024

This course examines developments in the art of Europe and the Americas from 1945 to roughly 1975. We will focus on major paradigms of this period: Abstract Expressionism, Neo-Dada and New Realism, Neo-concretism, Happenings, Pop, Minimalism and Post-minimalism, Arte povera, Fluxus, Conceptual Art, and Feminist strategies. Key questions include the following: How were notions of artistic skill--and of the artist's function--reimagined in the postwar period? How did artists intervene in the construction of identity, whether along the lines of nationality, race, class, gender, or sexuality? How did artists of the postwar period participate in strategies of mourning? What new roles did artists imagine for youthe spectator during this period? A final question will haunt our discussions: In what ways did artists of this period anticipate, participate in, or disrupt the emergent systems and technologies of globalization and exchange that manage our lives today?

ARTH223101

Early Renaissance Art in Italy

Leone, Stephanie

Fall 2024

Why was art made in the Renaissance? What did it mean to its original audience? This course studies connections between art, society and culture in Italy in the fourteenth and fifteenth centuries, a period of fertile artistic innovation. We will explore the prominent artistic centers of Florence, Siena, Rome, and Venice; powerful patrons like the Medici family; and renowned artists, such as Giotto, Brunelleschi, Donatello and Botticelli.

ARTH223201

Northern Renaissance Art

Golahny, Amy

Fall 2024

Painting in the Netherlands and in Germany in the fifteenth and sixteenth centuries. Emphasis will be on the style and the meaning of the great works of the masters of Northern Renaissance art such as Jan van Eyck, Hieronymus Bosch, Pieter Bruegel, and Albrecht Durer. We will discuss how the Renaissance in Northern Europe is different from the Italian Renaissance and what influences it absorbed from the Italians. We will consider the importance of printed pictures in this era when books and broadsheets assumed such a crucial role.

Modern Architecture

Orwig, Timothy T

Fall 2024

This course is an overview of the history of architecture in the Modern era, from its eighteenth- and nineteenth-century roots until the present day. Students will examine architecture, urban design, landscape design, and other allied fields such as art history, interior design, and engineering. The course will consider vernacular and commercial design as well as the roles of architects, artists, and patrons. Important issues include the effects of the Industrial Revolution and the rise of the skyscraper, national and international stylistic trends and movements, manufacturers, international exhibitions, and public and critical reaction. Satisfies Core requirement for Arts.

ARTH225701

Nineteenth Century Art

Wunsch, Oliver M

Fall 2024

An introduction to European and American art of the late eighteenth century to 1900. We will investigate the connections between art and contemporary developments, from the Industrial Revolution to globalization. The course will cover such artistic movements as Neoclassicism, Romanticism, Realism, Impressionism, and Post-Impressionism. Artists will include David, Goya, Turner, Monet, Van Gogh, and Rodin. We will look at their materials and techniques, and we will consider how they represented the issues animating their time: gender, race, class, technology, and power.

ARTH225801

Modernism and the Avant-Garde, 1900-1945

Lotery, Kevin

Fall 2024

In this introductory course we will unpack some of the crucial episodes in art of the first half of the twentieth century, including Italian Futurism, international Dada, Surrealism, De Stijl, the Harlem Renaissance, and Mexican Muralism. We will explore how these avant-garde formations sought to break down the barrier between the making of art and the making of life itself, inventing ways of sliding art into the everyday lives of people on the street, at home, and in the factory. Why, these artists ask again and again, must art be siloed in privileged gallery spaces that uphold repressive models of gender, class, and race? What new utopian futures are opened up when these spaces are negated or left behind?

ARTH227401

Buddhist Arts of Asia

Norton, Michael Allen

Fall 2024

In the early centuries AD, Buddhism spread eastward from its origins in India across Central Asia to China, Korea, and Japan. As it spread, it profoundly impacted the visual cultures of these regions. Students in this course will be introduced to the major styles and types of Buddhist art and architecture, as well as to the fundamental role it played in religious practice. Topics to be explored include the origins of the anthropomorphic Buddha image, pictorial narratives of the Buddha's life, the sacred architecture of mandalas, and visual representations of hells and paradises. Students will also deepen their knowledge about one aspect of Buddhist art or architecture through an in-depth research project on a well-conceived topic.

History of Photography

Anderson, Asher

Fall 2024

This course looks at the evolution of vision and practice through a selected survey of the history, technology, and aesthetics of photography from the earliest experiments in the medium to the present day. We will focus primarily on the photographic practice in Europe and the U.S. In this course, we will investigate the social, cultural, and political implications of the revolution of photography, paying critical attention to its manipulations within the contexts of entertainment, advertising, the state, science, journalism, modern and postmodern art. We will also carefully explore our relationships with the proliferation of mass media imagery today.

ARTH301601

Medieval Art in Focus: Holy Lands

Lansdowne, John C

Fall 2024

This course examines the art and architecture of the sacred sites and cities of the Middle East. It introduces a visual and material history spanning millennia and encompassing the regions major religious cultures in all their denominational diversity-Judaism, Greco-Roman Polytheism, Christianity, Islam. Special attention will be paid to the Middle Ages, including the Crusades and their aftermath, with topics including cultural hybridity, sectarianism, 'proto-colonialism' and the manifestation of these topics in art. The course examines pilgrimage in the development of sacred sites, and the widespread phenomenon of recreating these sites elsewhere throughout the world (culminating in American theme parks). Students will consider the shifting criteria for what constitutes the sacred in cult-religious practice and imagination. How and why does a thing or a place come to be seen as holy? To what extent can this holiness be altered, transferred, or reproduced? And what is the role of the visual arts in this process?

ARTH324801

Art and Ecology

Lotery, Kevin

Fall 2024

This seminar investigates the place of "ecology" and "ecological thinking" in modern and contemporary art. Through a series of case studies, we will examine how artists, designers, and other cross-disciplinary figures have approached the production, reception, or theorization of art as one node within larger systems of forces, flows, patterns, and living and non-living entities. Of utmost importance to our investigations will be the question of time: What forms of temporality whether figured as growth, technological reproduction, or historical becoming are operative once we approach cultural production in ecological terms? Other key themes include: forms and strategies of political ecology, the role of the machine and the nonhuman animal, interspecies communication and collaboration, environmental racism, notions of the Anthropocene and the Capitalocene, feminist and queer ecologies, dialogues between art and science-fiction, and finally, ecological or systems-based critiques of institutions. Note: This seminar is designed in collaboration with Prof. Claire Grace, who will be teaching the course over the same term at Wesleyan University. There will be intermittent meetings, discussions, and potential collaborations between the two seminars.

ARTH431401

The Materials of Art and their Conservation

Newman, Richard

Fall 2024

Preservation of a (traditional) work of art requires understanding the materials of which it is made up, their condition, determining a course of treatment, then carrying out a treatment. In this seminar, means by which the materials of art can be understood (historical documents and examination in a conservation lab) will be explored. A major focus will be on how conservators determine the 'state of preservation' that is the desired outcome of a particular treatment (which is rarely how the work of art looked when it was newly created). Other topics are conservation controversies (including cleaning of the Sistine Chapel), 'authenticity' (and authentication) of works of art, and preservation of art that may include highly perishable materials, digital media, or performance. Although some of the subjects are technical, no background in college science is required.

ARTH431601

History of Scientific Illustration

Wunsch, Oliver M

Fall 2024

What role do images play in the production of scientific knowledge? This course explores the different ways artists, scientists, and philosophers have answered this question from the Scientific Revolution to the present. We will adopt a broad definition of scientific illustration, looking at examples that range from seventeenth-century paintings of monstrous oddities to twenty-first-century brain scans. Major topics will include the relationship between art and science, the aesthetics of the diagram, the concept of visual objectivity, and the history of data visualization. We will examine the use and abuse of images in scientific rhetoric, from the visual foundations of scientific racism to contemporary depictions of climate change. Through historical case studies, students will learn how aesthetic conventions and design innovations have been used to manipulate information. By the end of the semester, students will have the ability to interpret images with a more discerning eye, critically analyzing how knowledge is constructed through representation.

ARTH110101

Art: Prehistoric to Middle Ages

Smith, Sharon Clarice Mary

Spring 2025

A fundamental course for understanding the visual arts in the Western World: painting, sculpture, and architecture. Major monuments in the history of art will be discussed in historical and cultural context beginning with Paleolithic cave art through the art of the medieval period. This course will examine some of the ancient material from an archaeological perspective, but its main emphasis will be on style and meaning in art. Assignments will include museum visits and the study of significant works of art in Greater Boston.

Imperial Designs: Art and Rivalry in the Eastern Mediterranean Frontier

Lansdowne, John C

Spring 2025

This is an Enduring Question course and is open to FRESHMEN only. You must take both ARTH1110 and HIST1723. Who owns the past and its artifacts? In this course pairing, we will examine the enduring ideas of empires and their challengers through the present day. These courses interrogate an enduring facet of the attitude of the imperial center toward places, spaces, and peoples: the impulse to chart, divide, name, claim, and portray. Using historical maps as our point of departure, we will investigate how these imperial impulses, made manifest in shifting constructs of ownership and otherness, extended beyond physical territories to encompass - to colonize - bodies and minds. Probing the visual, material, and embodied legacies of conquest in the Mediterranean context affords insight into the borders and boundaries still imposed today.

ARTH220501

Early American Art

Anderson, Asher

Spring 2025

In this course we will look at art and visual culture made in what is now the United States from ancient times to around 1800. We will consider visual material representing diverse experiences, including Native American art before and after contact with Europeans; depictions of early European settlements; and art, architecture, and material culture from the colonial, Revolutionary, and early national periods.

Throughout, we will ask what it means to be American both in the past and in our own time. As much as possible, both independently and as a group, we will study works of art in person at the Museum of Fine Arts, Boston, the Peabody Essex Museum, and elsewhere.

Art and Myth in Ancient Greece

Hoffman, Gail L

Spring 2025

An introduction to the visual representation of the Greek gods and goddesses and to the artistic depiction of the primary cycles of Greek legends (e.g., the Trojan War and heroes such as Herakles, Perseus, and Theseus). This course focuses on how specific visual attributes serve to identify mythological characters and how the development of narrative in Greek art helped to relate their stories. Inquiring into the use of mythological imagery to decorate temples, cult statues, and vases used primarily for the symposium (male drinking parties), we will consider the functions of mythological imagery within Greek society.

ARTH226201

The City of Rome

Polt, Christopher B

Spring 2025

What was a normal day like for ancient Romans? What did they see, hear, and do while going about their lives? How did those things change as Rome shifted from a Republic to an Empire and as their city became caput mundi ("Head of the World")? In this course we will reconstruct the lived experiences of Romans by examining Rome's urban spaces through art, architecture, artifacts, and texts. Along the way, we will explore: public buildings, mundane and monumental; recreation (baths, theaters, arenas); civic infrastructure (aqueducts, sewers, roads); economy and commerce (shopping, harbors, slavery); gender and sexuality (domestic spaces, brothels); religion (temples, sacrifices, funerals); and other topics as appropriate.

ARTH226701

Saltbox to Skyscraper: American Architecture

Orwig, Timothy T

Spring 2025

This course examines the history of buildings, landscapes, and urban growth in the United States, from early Native American and European contact to the present. Themes studied include typology, materials and technology, style and movements, the emergence of the architectural profession, and specific social contexts such as culture, gender, race, class, and ethnicity. Students will examine how the built environment is linked to climate, geography, and imaginations of the natural world, and influenced by politics, religion, economy, internationalism, and the definition of national and regional identity. Finally, because of the important role of Boston in American architectural history, the course will use Boston as a lens to understand American architectural history. Satisfies Core requirement for Arts.

ARTH300901

Artists and their Writings

Kearney, Anne D

Spring 2025

Conducted in French. In this course, students will study French culture through some key artists of the turn of the nineteenth century. The course will explore the rapport between their visual work, their writings (or writings about them) and their lives. The artists studied will be Van Gogh, Gauguin, Matisse, Picasso, Rodin, Camille Claudel, Cézanne. We will look at the evolution of their work in conjunction with their biographies, reading extracts from their letters or pronouncements on art and life.

Credits: 3

Room and Schedule: Stokes Hall 101N MWF 01:00PM-01:50PM

Satisfies Core Requirement: None

Prerequisites: French CCR II (FREN2210). Students with just four years of high school French or CCRI (FREN2209) may enroll with instructor's permission.

Corequisites: None

Cross-listed with: FREN3309

ARTH301001

Introduction to Contemporary Art

Lotery, Kevin

Spring 2025

This course traces art since roughly 1975, focusing primarily on Europe and the Americas in a global context. Rather than a strict survey, it looks closely at the key techniques, ideas, and debates conditioning contemporary art. We begin with postmodernist takes on the "politics of representation" in appropriation-based photographic and video works of the 1980s, situating them in larger discourses of feminist and queer theory, postcolonial thought, and critical race theory. We end with the challenges of our present and near future: ecological crisis, perpetual war, neo-fascist formations, questions of privilege, and the technologization of everyday life. What strategies have artists invented to research, articulate, and intervene in these ongoing emergencies?

ARTH301201

After Genghis Khan: Art and Architecture in Iran and Central Asia

Fetvaci, Emine F

Spring 2025

This course will examine the Mongol invasions of the thirteenth century and their effects on artistic production in Iran and Central Asia up to the early sixteenth century. Students will learn about the art and architecture of the Ilkhanid and Timurid dynasties, two of the most innovative and dynamic artistic traditions of the Islamic world, and heirs to the traditions of Genghis Khan's Mongol Empire. We will explore the use of art and architecture in the promotion of ideology and empire formation, cultural exchange across the Asian continent, the interaction between nomadic and sedentary populations and the merging of Turko-Mongolian and Persian cultural identities.

ARTH333201

Italian High Renaissance Art

Golahny, Amy

Spring 2025

The course studies the High Renaissance, of brief duration (1500-1520), but whose artists, Leonardo, Michelangelo, and Raphael, attained a level of creative accomplishment that served as a model for years to come. We explore the development of style, artistic rivalry, relationships between patrons and artists, the creation of Renaissance Rome, and competing artistic developments in Venice. This year, we focus especially on Leonardo in celebration of the 500th anniversary of his death. We also trace the development of art after Raphael's death in 1520, to understand how artists reacted to the challenge of the High Renaissance.

ARTH334901

Memory Work: Art and Mourning, 1945-Present

Lotery, Kevin

Spring 2025

This introductory course examines the relationship between the work of art and the work of mourning and memory, with a focus on art made after 1945 in a global context. By considering works that address historical traumas and their resonance in the present, we will consider enduring dilemmas surrounding the aesthetics, ethics, and politics of art that undertakes memory work. For help, we will look to a disparate group of artists, filmmakers, and other types of image makers in order to analyze arts responsibilities in the face of profound suffering. In a present of perpetual global war and a corresponding hypervisualization of state-sanctioned violence, what types of spaces are available for conducting memory work today? No prerequisites required.

ARTH440201

Art and Architecture of the Forbidden City

Campbell, Aurelia

Spring 2025

The Forbidden City palace in Beijing constituted the center of Chinese imperial power from the year 1420, when it was constructed, until the early twentieth century. Now home to the Palace Museum, the Forbidden City attracts millions of tourists annually. In addition to examining the Forbidden City's magnificent halls, temples, gardens, and art objects, produced exclusively for the members of the Ming and Qing imperial courts, students in this course will discuss the shifting roles of the Forbidden City--as a monument, a symbolic form, a social space, a political entity, and a center of cultural production--over a period of approximately six centuries, including the Mao and post-Mao eras.

ARTH442701

Early Medieval Art in Ireland and Britain

Netzer, Nancy D

Spring 2025

The course will examine the development of art in Ireland and Britain in the Early Medieval period and the production of Irish and English missionaries on the Continent. Emphasis will be placed on the following: 1. manuscripts, sculpture, and metalwork of the sixth to ninth century 2. understanding works of art in their historical contexts 3. sources of the works in the Celtic, Germanic and Mediterranean worlds 4. circumstances under which artists and scribes worked 5. the complex problem of defining local styles 6. complexities of dating works of art 7. evidence yielded through excavation of principal archaeological sites 8. de-constructing the scholarship in the field over the last two centuries. 9. placing new archaeological finds in the art historical narrative 10. the role of Irish manuscripts, metalwork, and sculpture in the Celtic Revival and as national monuments 11. misappropriations of Celtic and Anglo-Saxon symbols (i.e. Celtic Cross and Runes) by white supremacists

Senior Thesis in Art History

Anderson, Asher

Spring 2025

This seminar is required for graduating majors who have decided to undertake a Senior Thesis in their final semester. The focus of the course is on developing, writing, and editing your thesis project. Short readings focus on issues of style and form in art historical writing, and in-class workshops provide opportunities to present drafts and receive feedback from peers. Pre-req: Must be taken in the final semester following Seminar in Art Historical Research.

BIOL202501**Medical Terminology****DiBenedetto, Lynn M****Summer 2024**

The sciences have their own unique language and over ninety percent of the vocabulary comes from Greek and Latin roots. The goal of this course is to familiarize students with the Greek and Latin elements used to construct biomedical terminology in order to gain a better understanding of the words etymologies and meanings. Students will leave this course with: a basic knowledge of medical and clinical terminology broadly relating to human anatomy and physiology, including terminology pertaining to diagnosis and pathophysiology; an understanding of biomedical roots, suffixes, prefixes, and combined forms; a knowledge of how to construct biomedical terms; distinguish common medical abbreviations and acronyms; develop an active vocabulary of selected medical terms. This course will be a 100% on-line, asynchronous experience. Evaluation of successful mastery will include weekly, pre assigned exercises and quizzes. There will be 2-3 presentation assignments using Flip Grid software translating case studies, and a final exam.

Credits: 2**Room and Schedule:** On-line Asynchronous**Satisfies Core Requirement:** None**Prerequisites:** None**Corequisites:** None**Cross-listed with:** None**Frequency:** Annually**Student Level:** Undergraduate**Comments:** None**Status:** Offered**BIOL220001****Microbiology for Health Professionals****Dunn, Mary K****Summer 2024**

This course is a study of the basic physiological and biochemical activities of bacteria and viruses. Emphasis will be placed on virulence factors and the mechanism by which a variety of microorganisms and viruses establish an infection. The use of anti-viral drugs and antibiotics, the host immune response to microbial infection, and the effectiveness of various vaccination strategies will also be discussed.

Comparative Vertebrate Physiology

Kenaley, Christopher P

Summer 2024

This course is intended for Biology, Psychology, and Biochemistry majors and students in the pre-medical program seeking a broad overview of human physiology. This course will offer a comprehensive exploration of fundamental life systems with a primary emphasis on human physiology. The chemical and physical processes common to all living organisms, including hemodynamics, respiration, circulation, acid/base regulation, synaptic transmission, kidney and muscle function will be discussed. Also included are related topics on development of the organism and functional aspects of the immune system in host defense strategies.

Deep Sea Biology

Olins, Heather C

Summer 2024

Roughly 80% of habitable space on this planet is in the ocean below 1000 meters where sunlight never reaches. In this course we will dive into this rarely visited habitat that occupies the majority of our biosphere. We will take an interdisciplinary approach, as studying the deep requires the integration of geology, chemistry, ecology, physiology, and engineering. We will investigate fundamental aspects of biology such as how organisms adapt to challenges posed by their environment. Students will also gain an appreciation for how much of the planet remains unexplored and learn how scientists study the inaccessible ecosystems of the deep.

General Biology

Annunziato, Anthony T, Phd;Seyfried, Thomas N, Phd

Fall 2024

Designed for non-science majors who desire an introduction to cell and molecular biology, this course is also suggested for students who may be interested in the Biology major but lack sufficient preparation to enroll directly into BIOL 2000. Topics include the chemistry of life; biological membranes; cellular metabolism; cell structure; cell division; DNA replication/RNA transcription; protein synthesis; genetics/evolution. Lectures include discussions of the scientific method and current applications of biological investigations. Note: this course does not fulfill any requirement for the biology major, biochemistry major, or the pre-medical program.

Anatomy and Physiology 1

Mott, Devin

Fall 2024

This course lays the foundation for the understanding of human anatomy and physiology. The first portion of the course covers cellular and molecular aspects of eukaryotic cell function: basic chemistry, macromolecules, cell structure, membrane transport, metabolism, gene expression, cell cycle control, and genetics. The course continues with the study of several organ systems. Beginning with the Integument, which is followed by the Skeletal and Muscular Systems, and ending this first semester with the Nervous System. The cellular and molecular basis for the functions of these systems is an integral element of this portion of the course.

BIOL131008**Anatomy and Physiology Lab 1****Scheintaub, Hilary****Fall 2024**

This course is restricted to School of Nursing students. Other students may be admitted only during the course drop/add period on a seat-available basis. Laboratory exercises intended to familiarize students with the various structures and principles discussed in BIOL 1300 through the use of anatomical models, physiological experiments, and limited dissection.

Credits: 1

Room and Schedule: Higgins Hall 390 W 04:00PM-05:50PM

Satisfies Core Requirement: Natural Science

Prerequisites: None

BIOL200001

Molecules and Cells

Hake, Laura E

Fall 2024

Foundational course required for Biology majors that introduces students to living systems at the molecular and cellular level of organization. Topics introduced in this course include basic cellular biochemistry, gene regulation, cellular organization and metabolism, and cell signaling and genetics.

Credits: 3

Room and Schedule: Merkert Chemistry Center 127 TuTh 01:30PM-02:45PM

Satisfies Core Requirement: Natural Science

Prerequisites: CHEM1109 may be taken concurrently or equivalent or permission of the department.

Corequisites: None

Cross-listed with: None

Frequency: Every Fall,Every Spring

Student Level: Undergraduate

Comments: None

BIOL204001

Investigations in Molecular Cell Biology Lab

Warner, Douglas M

Fall 2024

A 3-credit laboratory course designed to introduce students to the core techniques and experimental strategies of modern molecular cell biology within the context of an original research investigation. Students will learn to construct testable hypotheses, design experiments, and critically analyze experimental results. During the course of their investigations, students will gain proficiency in microbial cell culture, molecular cloning, genetic analysis, and molecular characterization. Students will also gain proficiency in scientific communication and the use of biological databases.

Microbiology for Health Professionals

Eberhard, Jeremy J

Fall 2024

This course is a study of the basic physiological and biochemical activities of bacteria and viruses. Emphasis will be placed on virulence factors and the mechanism by which a variety of microorganisms and viruses establish an infection. The use of anti-viral drugs and antibiotics, the host immune response to microbial infection, and the effectiveness of various vaccination strategies will also be discussed.

BIOL230001**Biostatistics****DaCosta, Jeffrey M****Fall 2024**

This course will introduce students to the basic statistical techniques that are used in conducting biological and medical research. Main topics covered include descriptive statistics (averages, variability), probability and probability distributions (basic probability theory and how distributions are used in inference), statistical inference (parametric and non-parametric tests); and relationships between variables (correlation and linear). Students will become familiar with a standard statistical analyses using the software package R.

This course is intended for Biology, Psychology, and Biochemistry majors and students in the pre-medical program seeking a broad overview of human physiology. This course will offer a comprehensive exploration of fundamental life systems with a primary emphasis on human physiology. The chemical and physical processes common to all living organisms, including hemodynamics, respiration, circulation, acid/base regulation, synaptic transmission, kidney and muscle function will be discussed. Also included are related topics on development of the organism and functional aspects of the immune system in host defense strategies.

Cell Biology

Burgess, David R

Fall 2024

This course is designed to provide students with a strong foundation in the molecular biology of the cell. Topics covered in the course include cellular biochemistry, regulation of gene expression, subcellular organization, regulation of the cell cycle, membrane trafficking, cell-substrate interactions, cytoskeleton, cancer, and cell signaling. It serves as excellent preparation for more advanced courses in cell biology, molecular biology, developmental biology, and genetics.

BIOL314001

Research Methods in Organismal Biology

Kenaley, Christopher P

Fall 2024

Organismal biology is the study of living systems of all scales that shape the structure, function, ecology, and evolution of individual organisms. Experiments that elucidate how organisms respond to biotic and abiotic environmental stimulus over broad time scales--from changes in behavior to adaptation--are crucial to understanding biological diversity. In this course we'll explore the concepts and analytical tools that frame experimental research in organismal biology. Through group projects and active learning exercises, students will first make hypotheses concerning how organisms respond in time, space, and behavior to changes in environment and then design experiments and instruments that produce data to evaluate these hypotheses. Topics covered will include reconstructing phylogenetic history and the evolution of organismal form and function, evaluating form-function relationships, and the correlates of spatial and temporal distribution of organisms. In addition, the development of an analytical toolbox--specifically, learning the principles of data science and statistical analysis--is a central theme of this course.

BIOL407501

Research in Molecular Phylogenetics

DaCosta, Jeffrey M

Fall 2024

A phylogenetic tree is a diagram that depicts the relationships among a set of taxa or genes, and is a critical tool for many analyses of evolutionary history. This course covers the basic methods of phylogenetic inference from DNA sequence data, including data collection, alignment, and tree building using parsimony, distance, likelihood, and Bayesian techniques. Lectures will introduce the logical basis of these methods, and computational labs will give students hands-on experience with these methods using a variety of phylogenetic software packages. This course is recommended for students interested in advanced topics in bioinformatics.

BIOL409001

Virology

Eberhard, Jeremy J

Fall 2024

This course will consider eukaryotic DNA and RNA viruses that are important in human disease. Basic principles of virus structure, host cell entry and the molecular biology of virus life cycles will be considered in the context of infectious disease. Viruses to be examined include Influenza, cancer-related viruses such as the Human Papilloma Virus, HIV, and emerging viruses such as Ebola and the hantaviruses. The host immune response to viral infection and the effectiveness of various vaccination strategies will also be discussed.

BIOL412001

Inflammation and Disease

Chiles, Thomas;Taghian, Danielle

Fall 2024

Inflammation is the body's normal immune response to a variety of injuries. The principal aim of this course is to explore the relationship between the inflammatory response and a host of human diseases, including cardiovascular, autoimmune, musculoskeletal and digestive medical conditions, and cancer. The biology and physiology of acute inflammation, triggers of the immune response, onset of chronic inflammation and the role of chronic inflammation in the development of disease will be discussed using primary literature.

Credits: 3

Room and Schedule: 245 Beacon Street Room 214 MW 03:00PM-04:15PM

BIOL414001

Microbiology

Williams, Zachary

Fall 2024

This course provides a foundation in molecular cell biology for biology majors, focusing on bacteria, viruses, immunology, and host/microbe relationships. Bacterial structure and function are addressed in terms of physiology, genetics, and biochemistry. Gene expression, replication, and transmission are examined in a variety of eukaryotic viruses. A review of the innate and adaptive phases of the immune response is presented with an emphasis on pathogen recognition, cellular communication, and lymphocyte development. The course concludes with selected topics on pathogenesis, epidemiology, and microbial ecology.

BIOL42001

Introduction to Bioinformatics

Clote, Peter G

Fall 2024

Bioinformatics is an emerging field at the intersection of biology, mathematics, and computer science. It harnesses the power and speed of computers to analyze the molecules essential for life. This introductory course requires that students have a basic understanding of molecular biology, genetics, and the Internet, but it does not require extensive background in mathematics or programming. Students will learn bioinformatic tools from the public domain, public databases, and simple programming tasks in PYTHON.

BIOL429001

Metabolic Regulation and Human Disease

Altindis, Emrah

Fall 2024

The increasing knowledge about the metabolic pathways has deepened our understanding of human disease. Using studies from recent research and review articles, we will cover a variety of domains in the first half of the semester. These topics include insulin signaling/resistance, regulation of metabolism by different regulatory pathways and endoplasmic reticulum stress. We will also investigate important regulatory hormones including incretins, leptin and adiponectin and the tissue at the center of obesity, adipose tissue. Based on this foundation, we will focus on metabolic impairments in different human diseases. Specifically, we will be reading from the primary literature and from other relevant sources (e.g., review articles) on metabolic syndrome, pancreas function/dysfunction, type 2 diabetes, type 1 diabetes, gestational diabetes, MODY and obesity. After we complete this section, we will focus on the link between metabolic diseases and other important diseases including cancer and neurological diseases/dysfunction. Lastly, we will study the effects of racism and inequities in society on human health. At the end of the course, the students will develop a deep understanding of basic mechanisms in metabolic disease. This course is based on active teaching/learning principles and the instructor will be the guide on the side, rather than sage on the stage. Thus, the students are expected to actively participate in Discussions in each class.

BIOL444001

Vaccination and Immunity

Fofana, Ismael B

Fall 2024

No one could have imagined the devastating effects of Severe Acute Respiratory Syndrome 2 (SARS-CoV-2), the etiological agent of coronavirus disease 2019 (COVID-19). The impact and scale were unprecedented, especially that the richest and most advanced countries of the globe were the most affected. With a record-breaking speed of less than a year, 3 of COVID-19 vaccines (Pfizer-BioNTech, Moderna, and Oxford/AstraZeneca) and later Johnson & Johnson/Janssen, received approval in Europe and the US. Millions of lives were saved but vaccine hesitancy is still prevalent worldwide. It is imperative that lessons be learned from COVID-19 and other major pandemics such as Zika, Influenza, Ebola and HIV. 1- review basic concepts of human-pathogen interactions; 2- learn the basic principles of immunity and vaccination; 3- and discuss a few major infectious diseases through case studies

Neuroscience

Nystuen, Arne M

Fall 2024

This class will cover molecular neuroscience and neuroanatomy in a clinical and pharmaceutical context. Anatomy topics will include the structure, function, and pathology for the brain and associated nerves and vasculature. Sensory and motor systems will be discussed with special attention to the visual system, where genetic disease and current therapeutic strategies will be discussed in depth. We will cover pathology associated with neurodegenerative disease and the current clinical trials within this disease group.

BIOL483001

Research in Molecular Biology Lab

Fofana, Ismael B

Fall 2024

Satisfies the advanced experience requirement for the Biology major. An advanced project laboratory course for hands-on training in the experimental techniques of molecular biology under faculty supervision. In addition to formal lab training and discussions, students will have access to the lab outside class hours to work on projects intended to produce publication quality data. The research project will focus on environmentally-mediated gene expression in the organism *Pseudomonas fluorescens*. Methods taught include: DNA cloning techniques, DNA sequencing, polymerase chain reaction, and the use national databases for research and analysis. It is ideal for students who desire a solid introduction to hypothesis-driven research in molecular biology through practical training.

Investigations in Cellular Re-Programming

Connolly, Timothy J

Fall 2024

Satisfies the advanced experience requirement for the Biology major. Induced pluripotent stem cells, iPSCs, are cells that can be generated from adult cells such as skin fibroblasts. Once generated, iPSCs can be directed to differentiate into any cell and offer exciting models for disease research. This laboratory course will teach students the techniques used to reprogram adult murine fibroblasts into pluripotent stem cells and their subsequent differentiation into cardiac and neuronal lineages. Resulting cell lines will be characterized using molecular and cell biology techniques and students will work to create novel cellular disease models to progress particular disease research.

Nobel Prize Winning Research in Medicine or Physiology

Burgess, David R

Fall 2024

Satisfies the advanced experience requirement for the Biology major. In this course we will discuss primary research literature in the fields of cell and developmental biology that have led to the award of the Nobel Prize. Each student will select a primary paper cited by the Nobel Foundation as justification for the award together with a supportive current review on the topic and present the background information to the class. The primary paper will be discussed at the following class period, with all students having defined responsibilities for discussion of the figures and data.

BIOL504001

Topics in Developmental Biology

McMenamin, Sarah K

Fall 2024

Satisfies the advanced experience requirement for the Biology major. The field of molecular developmental biology asks: How do molecules and cells coordinate and function to produce organisms? How can these processes be modified in the context of disease and evolutionary change? With the goal of better understanding current research in the field of developmental biology, we will read primary literature focusing on a variety of techniques (molecular, cellular, genetic, biochemical) and numerous systems (tissue culture, mouse, fly, frog, zebrafish, and others). The course will focus on developing students' ability to comprehend and critically evaluate recent primarily literature, present scientific perspectives, and actively participate in scientific dialogue.

BIOL510001

Microbiome and Human Disease

Altindis, Emrah

Fall 2024

Satisfies the advanced experience requirement for the Biology major. For thousands of years, humans have thought of themselves as single autonomous organisms. With new sequencing technologies and experiments, we are learning that the human microbiome and commensal organisms are an important aspect of host biology, and change the idea of who we really are. Recent data suggest that we are more than *Homo sapiens*, but a symbiotic-organism that is surrounded with trillions of microorganisms in all surfaces. Recent studies suggest that the human microbiome and commensal microbes have important roles in human health and disease. Indeed, the gut microbiota aid in normal digestion, metabolism of nutrients and drugs, and development of the gut and immune system. Reduced bacterial diversity, as well as alterations in the microbiota composition, have been associated not only with gastrointestinal disease, but also obesity, diabetes, and metabolic syndrome. Direct evidence now suggests that transfer of the microbiome can play a role in host phenotypes, homeostasis, behavior, and disease pathogenesis. Using current scientific literature and reviews, we will investigate the role of the microbiome in human health and disease. Students will make short presentations of the papers, and the class will discuss the methodology and findings of the papers.

Credits: 2

Room and Schedule: Higgins Hall 552 Tu 11:00AM-12:50PM

Satisfies Core Requirement: None

Prerequisites: BIOL2000 Molecules and Cells and additional course work in molecular cell biology.

Microbiology and/or Immunology strongly recommended.

BIOL513001

Environmental Disruptors of Development

Hake, Laura E

Fall 2024

Satisfies the advanced experience requirement for the Biology major. More than 100,000 chemicals are manufactured and may end up as environmental pollutants. Some have toxic effects at high concentrations and protection plans are already in place. However, embryonic, fetal or neonatal exposure to low "safe" levels of numerous pollutants can (1) induce subtle changes in developmental programs regulated by steroid hormones; (2) increase the reproductive, immune, metabolic or cognitive disorders and (3) increase the risk of adult-onset disorders (breast cancer, prostate cancer, diabetes, reduced fertility). This course will examine experiments regarding Environmental Endocrine Disruptors and consider how this work is important in the development of regulatory policy.

Credits: 3

Room and Schedule: Higgins Hall 225 TuTh 10:30AM-11:45AM

Satisfies Core Requirement: None

Prerequisites: At least two of the following courses: BIOL3040, BIOL5060, BIOL4170, BIOL4510, BIOL4140, BIOL4350, BIOL4400.

BIOL520001

Glycobiology and Human Disease

Wiederschain, Gherman Y

Fall 2024

Satisfies the advanced experience requirement for the Biology major. In this seminar course we will discuss the structures, function, and metabolism (biosynthesis and degradation) of carbohydrate-containing molecules, which are widely distributed in nature. Glycosylation is a major type of posttranslational modification of proteins and lipids, and as a result of such modification these molecules (glycoconjugates) obtained new physical, chemical and biological properties that frequently determine very specific processes in the cells and whole living organisms. Glycoconjugates have important roles in intercellular interactions and adhesion, signaling, the immune response, fertilization, embryogenesis, the action of hormones and receptors, etc. Disorders (often hereditary) in degradation and biosynthesis of glycoconjugates lead to development of very severe diseases, a variety of lysosomal storage diseases (LSD) and congenital disorders of glycosylation (CDG), respectively. For the past two decades, new fields of study termed glycomedicine and glycopharmacology have been developing rapidly.

Credits: 2

Room and Schedule: Higgins Hall 260 MW 09:00AM-09:50AM

Satisfies Core Requirement: None

BIOL539001

Molecular Basis of Disease

Dunn, Rebecca K

Fall 2024

This course fulfills the Advanced Experience requirement of the biology major. In this course, we will use the primary scientific literature to explore the molecular basis of a selected group of diseases and disorders that represent a broad spectrum of humanmaladies. Each will serve as a case study to illustrate the consequences of errors in gene expression, protein folding and post-translational modification, stem cell function and cell specification, signaling, and/or immune activation. Students will gain (1) an understanding how basic biological phenomena underpin human disease and (2) experience in the analysis of scientific research articles. In parallel with class meetings, students will independently investigate the molecular basis of a disease of their choice.

Credits: 2

Room and Schedule: Higgins Hall 416;MW 12:00 Noon-12:50PM

Satisfies Core Requirement: None

Prerequisites: Molecules and Cells, Genetic or Introduction to Genomics, and additional coursework in physiology, cell biology, molecular biology, or biochemistry.

BIOL542001

Cancer As A Metabolic Disease

Seyfried, Thomas N, Phd

Fall 2024

Satisfies the advanced experience requirement for the Biology major. This seminar will review evidence showing that impaired cellular energy metabolism is the defining characteristic of nearly all cancers regardless of cellular or tissue origin. In contrast to normal cells, which derive most of their usable energy from oxidative phosphorylation, nearly all cancer cells become dependent on non-oxidative substrate level phosphorylations to meet energy demands. Evidence will be discussed supporting a general hypothesis that all hallmarks of cancer including genomic instability and metastasis can be linked to impaired mitochondrial function. A view of cancer as a metabolic disease will impact approaches to cancer management and prevention.

This course satisfies the advanced experience requirement for biology majors. This course will survey the various visualization techniques and instruments used by scientists and biomedical researchers: light microscopy, confocal, electron microscopy, super-resolution, and image processing. Students will discuss the experimental use of these techniques and instruments as described in the primary literature. The laboratory component will focus on becoming familiar with the instrumentation that we have available at Boston College. The course will culminate in individual projects of the students choosing utilizing equipment that we have in the laboratory.

BIOL570001

Biology of the Nucleus

Annunziato, Anthony T, Phd

Fall 2024

Satisfies the advanced experience requirement for the Biology major. This course provides an in-depth treatment of the molecular biology of DNA and RNA, with particular emphasis on the control and organization of the genetic material of eukaryotic organisms. Topics include chromatin structure and function, histone modifications, DNA replication, gene activation and silencing, DNA methylation, and RNA interference. Emphasis is on experimental design, and analysis of the primary literature.

Readings in Microbial Evolution

Hilbert, Zoe A

Fall 2024

Microbes are masterful shape-shifters capable of rapid adaptation to wide-ranging environmental conditions through many distinct mechanisms. In this course, we will explore primary literature focused on the evolution of and adaptive strategies employed by diverse microbes, including viruses, bacteria, fungi and parasites, with a particular emphasis on evolution of pathogenic species. Primary goals of the course are to gain a familiarity with the wide-ranging literature on microbial evolution, an ability to think critically about this literature, and to demonstrate understanding through a variety of written and oral assessments and in class participation.

Comparative Vertebrate Physiology

Kenaley, Christopher P

Spring 2025

This course is intended for Biology, Psychology, and Biochemistry majors and students in the pre-medical program seeking a broad overview of human physiology. This course will offer a comprehensive exploration of fundamental life systems with a primary emphasis on human physiology. The chemical and physical processes common to all living organisms, including hemodynamics, respiration, circulation, acid/base regulation, synaptic transmission, kidney and muscle function will be discussed. Also included are related topics on development of the organism and functional aspects of the immune system in host defense strategies.

Cell Biology

Folker, Eric S

Spring 2025

This course is designed to provide students with a strong foundation in the molecular biology of the cell. Topics covered in the course include cellular biochemistry, regulation of gene expression, subcellular organization, regulation of the cell cycle, membrane trafficking, cell-substrate interactions, cytoskeleton, cancer, and cell signaling. It serves as excellent preparation for more advanced courses in cell biology, molecular biology, developmental biology, and genetics.

Ecology in a Changing Climate

Olins, Heather C

Spring 2025

In the midst of widespread global climate change, Earth's biodiversity faces multiple synergistic threats. Climate change, habitat loss, pollution, over extraction, and invasive species threaten all species on Earth including our own. The tools of Ecology can help to understand these threats. Advances in science and modeling enable us to make predictions about future climate and ecosystem conditions, but these predictions have their limitations. Focusing solely on climate models and predictions of future scenarios and biodiversity loss can lead to feelings of hopelessness and desperation. To work towards an equitable, sustainable future for all species on Earth (including *Homo sapiens*) we need to learn about positive visions for the future, we need to be able to critically assess potential solutions, we need to examine examples of effective solutions, and we need to consider the roles we each can play in bringing about a positive future. In this course we will do these things together. Over the course of the semester, each student will integrate technical scientific literature, a diverse set of views and perspectives on how we interact with the natural world around us, and personal reflection to create an individual plan of action.

BIOL331001

Human Physiology Laboratory

DiBenedetto, Lynn M

Spring 2025

The human physiology lab is designed to encourage independent inquiry. Working in groups, students will use a software system (iWORX) that allows the collection of data recordings of physiological processes in real time. Students will analyze various types of data, including myographs (EMGs), ECGs, and spirometry. An independent research project is also a mandatory component of the lab. Students will present their data and experimental design to the class.

BIOL332001

Developmental Biology

Gonzalez Rosa, Juan Manuel

Spring 2025

Developmental Biology is the discipline that studies the processes by which a single cell, the fertilized egg, divides, differentiates, and progressively gives rise to a complex organism formed by billions of cells with highly specialized functions. This process fascinated Aristotle over 2,300 years ago and continues to be the source of some of the most challenging questions in Biology. Given that their DNA is identical, how do your muscle cells and neurons acquire their complex phenotypes? What signals are integrated so that a small cluster of relatively homogeneous cells gives rise to a limb? How are identity and positional memory encoded, and what mechanisms are activated to regenerate the original shape after injury? This course will cover essential concepts in genetics, cell signaling, and comparative embryology, which are foundational to the study of development. We will also focus on understanding critical experimental approaches and the relevance of model organisms for studying the embryo.

Credits: 3

Room and Schedule: Higgins Hall 310 MWF 03:00PM-03:50PM

Satisfies Core Requirement: None

BIOL403001

Deep Sea Biology

Olins, Heather C

Spring 2025

Roughly 80% of habitable space on this planet is in the ocean below 1000 meters where sunlight never reaches. In this course we will dive into this rarely visited habitat that occupies the majority of our biosphere. We will take an interdisciplinary approach, as studying the deep requires the integration of geology, chemistry, ecology, physiology, and engineering. We will investigate fundamental aspects of biology such as how organisms adapt to challenges posed by their environment. Students will also gain an appreciation for how much of the planet remains unexplored and learn how scientists study the inaccessible ecosystems of the deep.

BIOL425001

Population Genetics

Clote, Peter G

Spring 2025

In molecular evolution, random events such as pointwise DNA mutations and chromosomal rearrangement events (inversion, reciprocal translocation) create genetic variation in a diploid population that undergoes selection of the fittest to survive. This course describes mathematical models, both deterministic and stochastic, that provide a theoretical foundation for understanding modern genetics. The types of questions we'll address include the following. In a large population, how do haplogype frequencies change both in the presence and absence of selection and restricted migration? What is linkage disequilibrium and how is it measured? In situations of a population bottleneck, caused for instance by limited environmental resources, what is the probability that a particular allele will become fixed in the population, and what is the expected time until fixation? What is the coalescent? In addition, some original research papers will be presented.

Biological Chemistry

Dunn, Rebecca K;Meyer, Michelle M

Spring 2025

This course is designed to introduce biology and biochemistry majors to the subject with an emphasis on understanding the biochemical principals that are crucial to biological function at the molecular, cellular, and organismal levels. The material includes: (1) the structure and chemistry of biomolecules, including amino acids, proteins, lipids, carbohydrates, and nucleic acids; (2) the key metabolic pathways and enzymology involved in the synthesis/degradation of carbohydrates; and (3) the cycling of energy through biological systems. Reference will be made to alterations in biochemical structures, processes, and pathways that relate to specific diseases.

Spring 2025

This course will explore the structure, function, synthesis and interaction of nucleic acids and proteins. The mechanisms involved in maintaining cellular genetic and epigenetic information, and in reading this "code" to generate specific patterns of gene expression, will be studied in detail. Topics include classic and newly-developed techniques for studying macromolecules; biotechnology; the functional organization of chromosomes; protein folding and modifications; DNA replication, repair and supercoiling; RNA synthesis and processing; translation and the levels of gene regulation. Literature from the foundational investigations that led to our understanding of these processes and the current research in these areas will be presented.

Credits: 3

Room and Schedule: Higgins Hall 310 MWF 12:00 Noon-12:50PM

Satisfies Core Requirement: None

BIOL445001

Behavioral Ecology

DaCosta, Jeffrey M

Spring 2025

This course will examine the adaptive significance of behavior in an ecological context. Lectures and readings from the primary literature will review basic concepts and theory as well as model-based and experimental approaches to exploring questions in the field. Topics covered includes social behavior, reproductive behavior, life history strategies, optimal foraging, territoriality, co-evolution, and communication.

Credits: 3

Room and Schedule: Higgins Hall 310 MWF 10:00AM-10:50AM

Satisfies Core Requirement: None

BIOL451001

Cancer Biology

Taghian, Danielle

Spring 2025

The onset of cancer occurs through a multi-step process that is accompanied by the deregulation of fundamental cellular processes, including cell cycle control, apoptosis and angiogenesis. This course will provide an overview of the molecular and cellular changes associated with these processes and with the initiation, progression and metastasis of tumors. Topics covered will include tumorigenesis, tumor viruses, oncogenes, tumor suppressor genes, genomic instability and the current treatments for cancer. The class will draw on textbook and primary literature readings to enrich the current view of this complex disease.

Credits: 3

Room and Schedule: Higgins Hall 300 MWF 11:00AM-11:50AM

Satisfies Core Requirement: None

Prerequisites: BIOL2000 and BIOL2040

BIOL457001

Principles of Immunology

Fofana, Ismael B

Spring 2025

An introductory survey of the immune system, this course will examine the development and deployment of immunity from a molecular and cellular perspective. Topics will include innate versus adaptive immunity, B and T cell activation, antibodies and antigens, and immunological memory. Modern experimental techniques and the immune system's roles in infectious disease, cancer and autoimmune disease will also be discussed.

Credits: 3

Room and Schedule: Higgins Hall 310 TuTh 10:30AM-11:45AM

Satisfies Core Requirement: None

Prerequisites: BIOL2040 and additional coursework in molecular cell biology (such as BIOL3040, BIOL4140, BIOL4400)

Research in Molecular Biology Lab

Fofana, Ismael B

Spring 2025

Satisfies the advanced experience requirement for the Biology major. An advanced project laboratory course for hands-on training in the experimental techniques of molecular biology under faculty supervision. In addition to formal lab training and discussions, students will have access to the lab outside class hours to work on projects intended to produce publication quality data. The research project will focus on environmentally-mediated gene expression in the organism *Pseudomonas fluorescens*. Methods taught include: DNA cloning techniques, DNA sequencing, polymerase chain reaction, and the use national databases for research and analysis. It is ideal for students who desire a solid introduction to hypothesis-driven research in molecular biology through practical training.

BIOL501001

Nobel Prize Winning Research in Medicine or Physiology

Burgess, David R

Spring 2025

Satisfies the advanced experience requirement for the Biology major. In this course we will discuss primary research literature in the fields of cell and developmental biology that have led to the award of the Nobel Prize. Each student will select a primary paper cited by the Nobel Foundation as justification for the award together with a supportive current review on the topic and present the background information to the class. The primary paper will be discussed at the following class period, with all students having defined responsibilities for discussion of the figures and data.

Credits: 2

Room and Schedule: Stokes Hall 105S M 03:00PM-04:50PM

Satisfies Core Requirement: None

Prerequisites: BIOL3040 or related course work in molecular cell biology

Corequisites: None

Cross-listed with: None

BIOL507101

Microbial Community Ecology

Momeni, Babak

Spring 2025

Satisfies the advanced experience requirement for the Biology major. Polymicrobial communities can cause harmful infections as pathogens or facilitate food digestion as resident microbiota. They also have industrial applications for waste remediation or biofuel production. We will examine examples of microbial communities with implications in health, environment, or industry. The course surveys relevant ecological theories and covers current tools and methodologies used for characterization and analysis of microbial communities.

Credits: 2

Room and Schedule: Higgins Hall 465 Th 01:00PM-02:50PM

Satisfies Core Requirement: None

Prerequisites: BIOL 2010 and 2014; BIOL 414 and a statistics course recommended.

Corequisites: None

Cross-listed with: None

BIOL513001

Environmental Disruptors of Development

Hake, Laura E

Spring 2025

Satisfies the advanced experience requirement for the Biology major. More than 100,000 chemicals are manufactured and may end up as environmental pollutants. Some have toxic effects at high concentrations and protection plans are already in place. However, embryonic, fetal or neonatal exposure to low "safe" levels of numerous pollutants can (1) induce subtle changes in developmental programs regulated by steroid hormones; (2) increase the reproductive, immune, metabolic or cognitive disorders and (3) increase the risk of adult-onset disorders (breast cancer, prostate cancer, diabetes, reduced fertility). This course will examine experiments regarding Environmental Endocrine Disruptors and consider how this work is important in the development of regulatory policy.

Credits: 3

Room and Schedule: Higgins Hall 225 TuTh 10:30AM-11:45AM

Satisfies Core Requirement: None

Prerequisites: At least two of the following courses: BIOL3040, BIOL5060, BIOL4170, BIOL4510, BIOL4140, BIOL4350, BIOL4400.

BIOL523001

Immunity and Infectious Disease

Williams, Kenneth C

Spring 2025

Satisfies the advanced experience requirement for the Biology major. This course will focus on immune cells, the immune system's response to viral and bacterial infection and the pathogenesis resulting from these responses. Topics will include questions of self and non-self in immune responses, the role of mucosal immunity and gut flora in immune responses and pathogenesis, AIDS pathogenesis, vaccines, and cutting edge technological approaches to immune therapy. Reading materials will consist of a basic immunology text, classical primary papers, and research reports.

BIOL525001

Topics in Nutrition and Metabolism

Taghian, Danielle

Spring 2025

This course satisfies the advanced experience requirement of the Biology major. In this course, students will use the primary literature to explore topics in nutrition and metabolism. The principal aim of this course is to explore the biochemical, physiological and pathophysiological relationship between nutrition and human metabolism. The biochemistry of the macro- (carbohydrates, fats, proteins) and micro- (vitamins and minerals) nutrients, consumed in the human diet, as well as the products of their digestive breakdown, will be discussed. The course will explore the molecular, biochemical and physiological mechanisms that regulate metabolism, including nutrient transport, signal transduction, energy transformation and storage in cells and tissues. The components of a healthy diet and the mechanisms by which poor diet contributes to chronic disease such as diabetes, obesity, cardiovascular disease and cancers will be discussed using primary literature.

Credits: 3

Room and Schedule: 245 Beacon Street Room 229 MW 03:00PM-04:15PM

Satisfies Core Requirement: None

Prerequisites: BIOL2000, BIOL2040, and additional 3000+-level coursework in cell biology, molecular biology, and/or physiology.

Corequisites: None

Cross-listed with: None

Frequency: Annually

Student Level: Undergraduate

Comments: None

BIOL538001

Vertebrate Biomechanics

Kenaley, Christopher P

Spring 2025

Satisfies the advanced experience requirement for the Biology major. This course will explore the physical principles underlying biological processes and mechanisms including movement, feeding, architecture, and transport. Drawing on physics and mechanical engineering, the course will explore how organisms swim, fly, walk, and consume resources, how they respond to moving fluids, and the relationship between their size and design of mechanical systems. Underlying all these topics will be investigations of how biological materials (e.g., wood, muscle, bone, skin, etc.) influence the mechanical behavior of complex life forms. The course will prepare students for more in-depth explorations of other related disciplines including ergonomics, orthopedics, kinesiology, and sports medicine.

Credits: 3

Room and Schedule: 245 Beacon Street Room 230 TuTh 10:30AM-11:45AM

Satisfies Core Requirement: None

Prerequisites: BIOL3030. Familiarity with basic Newtonian physics and mechanics is recommended.

Corequisites: None

BIOL542001

Cancer As A Metabolic Disease

Seyfried, Thomas N, Phd

Spring 2025

Satisfies the advanced experience requirement for the Biology major. This seminar will review evidence showing that impaired cellular energy metabolism is the defining characteristic of nearly all cancers regardless of cellular or tissue origin. In contrast to normal cells, which derive most of their usable energy from oxidative phosphorylation, nearly all cancer cells become dependent on non-oxidative substrate level phosphorylations to meet energy demands. Evidence will be discussed supporting a general hypothesis that all hallmarks of cancer including genomic instability and metastasis can be linked to impaired mitochondrial function. A view of cancer as a metabolic disease will impact approaches to cancer management and prevention.

Credits: 3

Room and Schedule: Higgins Hall 465 TuTh 09:00AM-10:15AM

Satisfies Core Requirement: None

Prerequisites: BIOL2040 and BIOL3040

Corequisites: None

Cross-listed with: None

BIOL543001

Genomics and Personalized Medicine

Connolly, Timothy J

Spring 2025

Satisfies the advanced experience requirement for the Biology major. Personalized medicine is based on the idea that each person's unique genome sequence can be used to predict risk of acquiring specific diseases, allowing for more informed choices about health. The students will be exposed to the scientific concepts and technologies empowering personalized medicine. Through lecture, research paper reading and discussion the students will understand how human genomic information has impacted current topics in biomedical research. Students will write a research paper focused on how genomic information has advanced understanding of a human disease and how translation of genomic information will impact treatment or disease detection in the future.

Credits: 3

Room and Schedule: Devlin Hall 018 MW 03:00PM-04:15PM

Satisfies Core Requirement: None

Prerequisites: BIOL2040 and a genetics or genomics course. Additional coursework in biochemistry and molecular biology is strongly recommended.

Corequisites: None

BIOL545001

Advanced Lab in Cell Imaging

Judson, Bret

Spring 2025

This course satisfies the advanced experience requirement for biology majors. This course will survey the various visualization techniques and instruments used by scientists and biomedical researchers: light microscopy, confocal, electron microscopy, super-resolution, and image processing. Students will discuss the experimental use of these techniques and instruments as described in the primary literature. The laboratory component will focus on becoming familiar with the instrumentation that we have available at Boston College. The course will culminate in individual projects of the students choosing utilizing equipment that we have in the laboratory.

Credits: 2

Successful Science Communication

Olins, Heather C

Spring 2025

Strong communication skills are a requirement for success in science, but many early-career scientists lack confidence and training related to aspects of their science communication. This interactive and participant-focused seminar was designed to help early-career scientists become more successful communicators. Topics covered include: identifying personal communication goals, why and how scientists communicate, tailoring communication to particular audiences, honing your message, and delivering effective presentations.

Doctoral Continuation

Das, Maitreyi

Spring 2025

All students who have been admitted to candidacy for the Ph.D. degree are required to register and to pay the fee for doctoral continuation during each semester of their candidacy. Doctoral Continuation requires a commitment of at least 20 hours per week working on the dissertation.

Capstone: The Courage to Becoming

Bracher, Elizabeth R

Fall 2024

Capstone Seniors only. classes may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. The title of the Cornerstone elective The Courage to Know implies it requires courage to be an educated person. Wisdom evolves from having courage to set aside previous ways of being, seeing, and knowing, in order to incorporate new and previously unexplored understandings of the world around us. As a first-year student at BC, you courageously set out to know yourself in new ways while transitioning into college. Now, as seniors transitioning out of college, how has that early experience of CTK and your experience of Jesuit education combined to give you the Courage to Be . . .Be Attentive, Be Intelligent, Be Responsible, Be Reasonable, and Be Loving as you move from undergraduate life at BC into professional life beyond Chestnut Hill? Restricted to students who took Courage to Know in their first year.If seats are not filled, students from other sections of CTK in either of those semesters will be considered for overrides. Email Dr. Bracher renicke@bc.edu to ask to be enrolled in this course.

Capstone: Life and Career Planning

Capalbo, Robert F

Fall 2024

Seniors only. Capstone classes may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. This course provides an overview of life and career planning in the context of (1) career, (2) personal relationships, (3) spirituality, and (4) ethical decision making. Students are asked to develop autobiographical responses to a series of questions about their lives to find themes related to possible careers and relationship issues. Readings, cases, exercises, and guest lecturers will amplify those personal themes and common issues in life as we enter the twenty-first century. The integration of spirituality and ethical decision making into one's life will be addressed by readings on ethical perspectives and the students' written reflections.

Capstone: The Balancing Act

Olivieri, Scott D

Fall 2024

Capstone classes may NOT be taken Pass/Fail. Seniors only. You may take only ONE Capstone class before graduation.College students have many competing demands. Academics, friends, student orgs, physical and emotional wellness, family, faith, service, and work all need attention. In The Balancing Act, we cover all these life components through a dynamic mix of articles, books, podcasts, and videos targeted to graduating seniors. Class sessions include small group discussions, white-boarding activities, case studies, role playing, and student presentations. In this small discussion-based course, students are exposed to thought leaders and reflect on how they can apply this research to enhance their lives. By sharing our experiences, we build a tight community and learn from each other. The course is divided into five modules each covering a major life domain. Students reflect on their past, assess their current state, and then develop strategies to optimize each life domain. The class skews practical, with Take Action Challenges related to personal finance, gratitude, cooking, fitness, and social media management. Throughout the semester students construct a balance plan to ensure their activities align with their values and goalsultimately providing them with a roadmap to a productive, meaningful, and balanced life.

Capstone: Surviving Life with Humor

Jayasundera, Thusitha

Fall 2024

Capstone classes may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. Seniors only. A sense of humor can be a powerful tool that helps us navigate real-life situations that may otherwise cause us anxiety and distress. This course aims to sharpen your emotional intelligence through humor, and help cultivate values and attitudes that will serve you well in life. Class discussions will allow us to acknowledge another point of view with empathy, and convey our own ideas with humor and humility. We will study the Capstone foundations (spirituality, vocation, citizenship, relationships) through the lens of humor and, hopefully, equip you with yet another valuable tool for success, as you embark on the next chapter of your lives.

Capstone: Desire and Discernment

Muldoon, Timothy P

Fall 2024

Seniors only. Capstone classes may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. First, the course will involve careful reflection on the sifting and pruning of desires. It will introduce philosophical reflection on desire from ancient Greece to modern philosophy, paying particular attention to the Ignatian tradition of discernment of spirits. Second, it will invite particular reflection on our relationships, and the desires that we have for the relationships we seek to cultivate over the course of our lives. Third, it will invite students to reflect on their experiences of work and preparation for a career, asking how their Boston College education has formed them. Fourth, we will reflect on our citizenship within communities: family, local community, society, nation, and world.

Capstone: Leadership and Mindfulness

Waddock, Sandra A

Fall 2024

Capstone classes may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. No matter what your major, you will participate in groups and organizations that will consistently ask or expect you to lead. The best leader is authentic, has integrity, is self- and other-aware, and acts with this awareness firmly in mind. Good leaders, that is, act mindfully with respect for the people and world around them. This course explores your development as a mindful focusing inward and outward, reflecting on where you have come from and where you are going, what type of world you want to live in, your relationships with others, and how you can be an effective leader.

Capstone: Pilgrim's Progress--The Discerned Life on Pilgrimage

Beaumier, Casey, SJ

Fall 2024

This Capstone course will provide seminar members with the opportunity to pause in order to consider how the image of pilgrimage might assist in the interpretation of life as an act of faithful trust. The intention is that this might be accomplished through particular focus upon life experiences occurring before, during, and after matriculation at Boston College--especially regarding one's engagement with relationships, society, work, and spirituality. We will attempt this through the careful pondering of the pilgrim way of life to elicit greater desires for the future journey, specifically through works of fiction, autobiography, business practice, and prayer.

Capstone: Adulthood

Arnold, Karen

Fall 2024

Seniors only. Capstone classes may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. Most college students in their early 20s feel neither fully adult nor fully competent in the tasks, responsibilities, and behaviors that are traditionally associated with grown-up life. In this class, students will take stock of their journey to adulthood so far and look ahead to what relationships, work, citizenship, and spirituality might look like in post-college life. Readings on the developmental psychology of young adulthood will be paired with popular media, exercises, and reflective writing to help students progress in their own "adulthood" as they prepare to negotiate the transition out of college.

Capstone: What Matters Most

Hammond, Alison B

Fall 2024

Seniors only. Capstone classes may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. This Capstone seminar will ask you to review and preview some of your life's most significant commitments in light of a fundamental question: What matters most? Course materials include books, articles, podcasts, and videos that will prepare you to reflect deeply and write regularly on topics such as family, friendship, love, citizenship, meaning, and purpose. Undoubtedly, the more you give to the course materials and assignments, the more you will gain - and the better you will come to understand what matters most to you. And isn't your life too valuable to be guided by anything else?

Capstone: Identifying Your Truth

Stoops, Melinda

Fall 2024

Seniors only. Capstone classes may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. This Capstone lets students reflect upon their college experiences and consider intentional approaches towards post-college life. The students' formation furnishes the framework for our process. The first part of the course explores how students developed within intellectual, social, and spiritual dimensions and what they came to know about themselves in the process. After this review of formative experiences and outcomes, we focus toward the future and their development of individualized frameworks to guide transition into life after college. Students will reflect upon their personal truths throughout the course, using existentialism, social psychology, and examination of their individual strengths as guides.

Free Markets, Faith, and the Common Good

Cioni, Joseph R

Spring 2025

If sharing our gifts, pursuing justice, and acting on our concern for the poor and marginalized of society are core values of Jesuit-trained students, to what extent is free market capitalism a good "fit" for helping us meet those goals? In this course, we will explore several key moral and philosophical foundations of free market capitalism. These arguments will then be placed in dialogue with central insights contained in Catholic social teaching, especially the principles of human dignity, solidarity, the preferential option for the poor, and the common good.

Leading Others and Leading the Self

Kelly, Corey R

Spring 2025

Being a leader is about becoming more of yourself and leaning into one's authenticity and values in service of others. This course examines self-development, self-awareness, interpersonal effectiveness and resilience as key elements of leadership. In this course, students will learn about the concepts such as humility, vulnerability, dignity, and emotional intelligence in the context of leading. Students will be able to communicate who they are as leaders, their values and strengths, and how those align with their leadership philosophy and style. This course will also discuss developing others and team culture in an intentional manner, including how trust and belonging are cultivated. Focusing on self-leadership and with a strengths-based lens, this course will incorporate mindfulness, discernment, and gratitude practices that build capacity for leadership adaptability in the face of challenges. At the conclusion of the class, students will have created a distinct leadership vision and purpose to guide them after graduation.

Everybody's Working for the Weekend: Ambition and Alienation

Rojcewicz, Christine

Spring 2025

This course will propose an answer to the following question: Why does it seem like some people are more ambitious than others? On the surface, those with what appears to be a natural drive to succeed seem to become more affluent. That is to say, some people appear to embrace hustle culture, or the idea that any time spent not making money is wasted time, while others are drawn toward a trend identified around 2021 as quiet quitting, that is to say, they refuse to devote more time and energy to their work than is absolutely necessary to avoid losing their jobs. Why is this apparent lack of ambition and motivation so prevalent? Can we blame mere laziness? This question will be answered with a resounding no. Rather, this class will show that there are indeed systematic measures in place that cause some to not appear as motivated as others. In order to work through this answer, this class will look at alienation and capitalism. This course will address the effects of systemic racism, automation and AI, environmental concerns, generational trends, and the COVID-19 pandemic on ones ambition to succeed in the workforce. This course will combine philosophical readings from Marx, Weber, Arendt, and others with contemporary business case studies.

Sustaining (Y)Our Future

Olins, Heather C

Spring 2025

In this 1 credit course, seniors from a variety of majors will come together weekly to consider ways they might engage in future work related to climate change mitigation, biodiversity preservation, and sustainability. We will take stock of our skills and interests, examine the landscape of climate solutions, and identify interesting and unexpected ways people are actively working towards these solutions across disciplines. As we do this work in community, you will consider your future trajectory more broadly, and the ways in which your time at Boston College has prepared you for the next chapter and those beyond.

Lead Like Ignatius

Berardelli, Lynn M

Spring 2025

Are you hoping to take on leadership roles once you graduate? If so, what type of leader would you like to be? St. Ignatius of Loyola, founder of the Jesuit order, provides an inspiring approach for future leaders. Identifying and applying our gifts, reflecting on our experiences, constantly seeking improvement, making sound decisions, and considering our impact on others these are just some of the practical hallmarks of Ignatian spirituality that will be explored as we consider our personal and professional leadership. Based on a book by Chris Lowney, *Heroic Leadership: Best Practices from a 450-Year-Old Company that Changed the World*, and other selected readings, seniors in this one-credit course will discover resources and skills that will serve you in the transition to life beyond the University.

From Common App to Cap and Gown: Reflecting on Your BC Career from the Very Beginning

O'Brien, Christopher

Spring 2025

This course will give students the opportunity to reflect on their time at Boston College while also exploring possibilities for reimagining higher education. Students will gain a deeper understanding of their time at BC and how their experiences here will prepare them for a fulfilling life after graduation. You are nearing your last days as an undergraduate at Boston College. It's time to take a moment (or a semester) and reflect on how you got here. More specifically, let's take some time to investigate the many elements of your life and your life at Boston College that allowed you to arrive at this place in time. Before you move on to your next endeavor, let's spend some time reviewing your relationship with and understanding of Boston College. Our discussions will bring to light the people, stories and decisions you made in order to make the most out of your time here. And now that you have lived it maybe we can reimagine some of the important moments all BC students go through. Maybe we can even improve them? This course will go step by step in both time and stages of your Boston College experience. We will have discussions about the meaning and struggles of the college admissions process all the way to your hopes, dreams and worries about commencement and graduation. We will talk about the choices you have made while you have been at BC and what you hope those choices will lead to later in your life.

There and Back Again: A Critical Reflection on Hobbits, Wizards, Middle Earth, and a Purposeful Life after Boston College

Gareau, Brian J, PHD

Spring 2025

This seminar-style capstone explores J.R.R. Tolkiens transformative works, which have defined the modern fantasy genre and inspired generations to reflect on faith, purpose, and meaning. Through Tolkiens narratives, students will engage in discussions on how their own journeys at Boston College mirror the themes of challenge, growth, and hope found in Middle-earth. As they prepare to graduate, they will reflect on how their experiences at BC resonate with Tolkiens idea of "There and Back Again," fostering a deeper understanding of their personal, and intellectual paths.

Self & Community

Muldoon, Timothy P

Spring 2025

This course invites students to discern their insights--that is, the ways that they come to knowledge--for the sake of building a good life and a good world. It is based on Bernard Lonergan's "heuristic method," a method of discovery of the inner structures of our understanding that shape our ability to make sense of the world. In the first part of the course, students will engage in exercises that help them in the process of what Lonergan calls "self-appropriation," taking hold of oneself and one's intelligence. In the second part, students will work together to use what they've learned for the sake of developing a project that aims at some social good. Guest lecturers from different disciplines and fields will help name the various ways that reflective intelligence can contribute to a community of growth, healing the world's ills and creating new avenues of progress.

Capstone: One Life, Many Lives

Weiss, James M

Spring 2025

Capstone classes cannot be taken Pass/Fail. You may take only one Capstone class before graduation. This Capstone is designed for students who have engaged in service projects during college and want to reflect on that as they plan their future lives. The service projects may have been through BC (Pulse, 4Boston, Arrupe, service trips, etc.) or on their own in Boston, the U.S., or abroad. Please contact Fr. Weiss to enroll: weissj@bc.edu or 617 552 3897.. This course gives you the chance to review what you have made of your education and preview your long-term life commitments to work, relationships, community, and spirituality. We read fiction, psychology, sociology, and wisdom figures to find the deeper continuity underlying our many experiences. Students lead discussions, conduct interviews of working people, and cap off their Capstone by writing their own autobiography.

Capstone: Your Future, Your Choice

Michalczyk, Susan A

Spring 2025

Capstone classes are for seniors only and may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. Reflecting upon your BC years and looking ahead, in Capstone you'll center yourself in your present to process learning and relationships. Journeying forward, you'll learn more about yourself with each choice you make. Written and visual narratives, fiction, autobiography and film connect your college experience with numerous aspects of your life -- past, present, future. In our search for meaning, we draw strength from relationships: to self, to others, to God. The profoundest relationships build upon identifying the self as other, recognizing the sacred in the profane. Choosing a life of mutual respect defines the human condition at its best.

Capstone: The Balancing Act

Olivieri, Scott D

Spring 2025

Capstone classes may NOT be taken Pass/Fail. Seniors only. You may take only ONE Capstone class before graduation. College students have many competing demands. Academics, friends, student orgs, physical and emotional wellness, family, faith, service, and work all need attention. In The Balancing Act, we cover all these life components through a dynamic mix of articles, books, podcasts, and videos targeted to graduating seniors. Class sessions include small group discussions, white-boarding activities, case studies, role playing, and student presentations. In this small discussion-based course, students are exposed to thought leaders and reflect on how they can apply this research to enhance their lives. By sharing our experiences, we build a tight community and learn from each other. The course is divided into five modules each covering a major life domain. Students reflect on their past, assess their current state, and then develop strategies to optimize each life domain. The class skews practical, with Take Action Challenges related to personal finance, gratitude, cooking, fitness, and social media management. Throughout the semester students construct a balance plan to ensure their activities align with their values and goals ultimately providing them with a roadmap to a productive, meaningful, and balanced life.

Capstone: Mindful First Gen Success

Gentilella, Dacia J

Spring 2025

Capstone classes may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. Where are we really living day to day? Are we holding onto our past? Are we planning for and overwhelmed by the future? What happened to the present? We will explore the particular challenges of first gen students including the trailblazing necessary to enter and thrive in college and the way in which their past can be seen as an accomplishment that informs their lives but doesn't hold them back from exploring the world in a fearless and unfolding way.

Capstone: Love and Indoctrination

Kaplan-Maxfield, Thomas

Spring 2025

Capstone classes may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. Seniors only. In our world of political spin and fake news, the surveillance state and social media, the pressure to separate what's real and valuable from what's fake and mere propaganda (another way of saying lies) is paramount, and critical for figuring out how to live, practically, spiritually, intellectually and psychologically. In George Orwell's 1984, the affair of Winston Smith and Julia threatens the entire structure of Big Brother. Why? What is it about love that threatens large systems based on indoctrination? In this course we will explore and develop working definitions of both love and indoctrination in order to differentiate them.

Capstone: Working, Playing, Being

Storey, David E

Spring 2025

Capstone classes may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. Seniors only.. The conventional wisdom is that BC student culture is "work hard, play hard." But what do we mean by "work" and "play" here? How do these implicit meanings reflect broader cultural forces? And do these meanings serve us well? Senior year is an exciting but anxious time, and this seminar is a chance for you to: (a) reflect on how your education has shaped you, and how you have shaped your education and (b) explore your goals, fears, hopes, and expectations around life post-graduation with a small group of peers. We will examine: (1) the meaning of, and relationship between, work and leisure in your own life; (2) how they have developed since your freshman year in light of your education at BC and; (3) how they figure into your vision of a fulfilling life.

Capstone: A Life Well Lived

DeChiara-Quenzer, Deborah

Spring 2025

Capstone classes may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. Seniors only.. This course engages students in serious reflection on what it means to have "a life well lived." It is advantageous to do this reflection at this time in your life, as it affords you time and opportunity to shape your life going forward. What kind of life do you hope to live? What will bring you peace and satisfaction--dare we say, even happiness? Students will be asked to examine themselves by looking both backwards and forwards in many dimensions of their lives (education, ethics, relationships, career, etc.) while learning what others have said about having a meaningful life.

Capstone: Creativity and Self

Roberts, Susan A

Spring 2025

Capstone classes are for seniors only and may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. Creativity is the act of bringing that which does not exist into existence, of bringing forward that which has previously never lived. It is the remarkable experience of bringing something out of nothing. In order to bring something new into the world, you must be willing to go into the unknown. Just as the poet might listen inwardly and stay open for the next word and just as the artist might pay attention to the images that arise from within, creativity asks that we have one foot in what is known, or existence, and one foot in what is not-known, or non-existence. This requires an ability to be still, to look both inward and outward, and then to record the resulting art-making or in life. In this Capstone course, students will attend to two areas: the meaning of art and mindfulness, and their own history of making (or lack thereof) and how they would like to build artistic sensibility, creativity and creation into their lives. We will investigate the spiritual roots of creativity, and the ways in which creativity and appreciation of art and art-making can contribute meaningfully to the development of one as a full citizen of the world. You do not have to have any experience in art-making to take this course. Texts include: Creativity: Where the Divine and Human Meet, by Matthew Fox and Art and Fear: Observations on the Perils (and Rewards) of Artmaking, by David Bayles and Ted Orland, Start Where You Are: A Journal for Self-Exploration, by Meera Lee Patel (you should write in this every week; you'll be presenting it in your "exit interview" at semester's end)

UNCP552701**Capstone: Your Roaring 20s (and Beyond)****Regan, Tracy L****Spring 2025**

Capstone classes are for seniors only and may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. As your graduation from Boston College looms, soon you'll have the opportunity to join the chorus of people proclaiming that college was the best four years of their life. Why does everyone say that and do you feel that way? If not, will you feel that way at some point in the future? The coveted real world awaits you where you'll finally have a chance to go and set the world aflame. As you approach this important juncture in your life, this class will provide you the opportunity to reflect and discuss your time on the Heights all the while helping you prepare for the decade(s) ahead. How did you grow during your time here? What lessons did you learn? Do you have any regrets? What are your most cherished memories? Did you become a person for others? And how will you carry the lessons you learned into the next proverbial chapter of your life as you navigate a career, relationships, a family, getting older, etc.? You'll have a chance to read a variety of viewpoints about the next decade of your life and beyond. As a class, we'll consider your academic, professional, and personal development in the context of relationships, spirituality, and citizenship. You'll join in conversation with your peers, under the guidance of an older economist who has experienced a lot of this already, and be ready to engage in lively dialogue on a weekly basis with the opportunity to reflect, think, and debate matters through a series of written assignments.

UNCP554101**Capstone: Into the Woods****Rudner, Bonnie****Spring 2025**

All readers, young and old, share the wonder in fairy tales. This serves a deeper purpose: to experiment and learn our boundaries and responsibilities. There are dangers in woods, but Red Riding Hood learns a lot, frees herself, and embarks upon life. The symbolic journey into the woods allows seniors to leave the "woods of BC" with optimism and commitment. How will you negotiate transitions into society with the wisdom from your journey here?

Commitment and Freedom

Cornille, Catherine M

Spring 2025

In an age of infinite browsing and vast personal and professional possibilities, the idea of commitment to a particular person, religion, ideal, and vocational path seems more than ever countercultural. Why limit oneself to one option when a variety of attractive alternatives readily present themselves, or when one might continuously scan the horizon of possibilities without locking oneself in? Though freedom and commitment seem diametrically opposed, we will explore in this seminar the ways in which they may actually intersect, considering the ways in which freedom may lead to commitment and commitment may in turn generate freedom.

Capstone: How We Decide

Lamoureux, Jeffrey A, PHD

Spring 2025

Seniors only. Capstone classes may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. Why did I eat at White Mountain at 11PM last night? And how can my friends convince me to go to Cityside when I know I should be studying? In this seminar, we will focus on how the mind and brain function to produce the decisions we ourselves make. The class is open to students from all majors, and there is no science prerequisite. Throughout the semester, we will reflect on our own past decisions, and consider alternative decision making strategies for the future.

Thinking Like a Chemist

Hartmann, Nathaniel J;Keen, Clarissa

Summer 2024

This course is intended to prepare students for the General Chemistry sequence and will develop students' confidence with core chemistry concepts such as characterizing substances and mixtures, structure-property relationships, chemical reactions, energy, and equilibrium. Students will explore these concepts through real-world examples with a focus on developing problem solving skills and recognizing the cumulative nature of the topics. Students will also discuss best practices for notetaking and study habits for succeeding in chemistry.

CHEM110501

Chemistry and Society I

Keen, Clarissa

Fall 2024

For non-science majors or for those who do not require a lab science course. This is a two-semester sequence with the emphasis during the first semester placed on basic chemical principles and their application to environmental issues. Topics covered include air and water pollution, global warming, ozone depletion, hazardous waste, and energy use and alternative energy sources. The goal of the course is to develop a knowledge base from which one can make intelligent decisions about local global environmental issues as well as formulate solutions to the ever-increasingly complex problems of today's technological society.

CHEM110914

General Chemistry I

Akinniyi, Akinwande Solomon

Fall 2024

This course is intended for students whose major interest is science or medicine. It offers a rigorous introduction to the principles of chemistry with special emphasis on quantitative relationships and chemical equilibrium and the structures of atoms, molecules, and crystals. The properties of the more common elements and compounds are considered against a background of these principles and the periodic table.

Credits: 0

Room and Schedule: Merkert Chemistry Center 129 W 02:00PM-02:50PM

Satisfies Core Requirement: Natural Science

Prerequisites: One year of high school chemistry.

Corequisites: CHEM1111

This course is intended for students from any major (including undecided) with a strong foundation and interest in chemistry. CHEM1117 begins with the theoretical description of atomic and molecular structure and with examples of modern experimental techniques for visualizing and manipulating individual atoms and molecules. The laws of thermodynamics and kinetics are studied to understand why chemical reactions occur at all, why it is that once reactions start they can't go all the way to completion, and how molecules act as catalysts to speed up reactions without being consumed themselves.

Credits: 1

Room and Schedule: Merkert Chemistry Center 18 F 09:00AM-11:45AM

Satisfies Core Requirement: Natural Science

Prerequisites: None

Corequisites: CHEM1161

Cross-listed with: None

Frequency: Every Fall

Student Level: Undergraduate

Comments: None

Status: Offered

CHEM223101**Organic Chemistry I**

Deak, Holly L

Fall 2024

An introduction to the chemistry, properties, and uses of organic compounds. The correlation of structure with properties, reaction mechanisms, and the modern approach to structural and synthetic problems are stressed throughout. In the laboratory, the aim is acquisition of sound experimental techniques through the synthesis of selected compounds.

Credits: 3

Room and Schedule: Merkert Chemistry Center 127 MWF 10:00AM-10:50AM

Satisfies Core Requirement: None

Prerequisites: CHEM1110 or Note that CHEM2231 is a prerequisite for CHEM2232

Corequisites: CHEM2233

Cross-listed with: None

Frequency: Every Fall

Student Level: Undergraduate

Comments: None

Status: Offered

CHEM223102

Organic Chemistry I

Kubenik, Trevor K

Fall 2024

An introduction to the chemistry, properties, and uses of organic compounds. The correlation of structure with properties, reaction mechanisms, and the modern approach to structural and synthetic problems are stressed throughout. In the laboratory, the aim is acquisition of sound experimental techniques through the synthesis of selected compounds.

Credits: 0

Room and Schedule: Merkert Chemistry Center 127 W 03:00PM-03:50PM

Satisfies Core Requirement: None

Prerequisites: CHEM1110 or Note that CHEM2231 is a prerequisite for CHEM2232

Corequisites: CHEM2233

Cross-listed with: None

Frequency: Every Fall

Student Level: Undergraduate

Comments: None

Status: Offered

CHEM223103

Organic Chemistry I

Pratt, Jared C

Fall 2024

An introduction to the chemistry, properties, and uses of organic compounds. The correlation of structure with properties, reaction mechanisms, and the modern approach to structural and synthetic problems are stressed throughout. In the laboratory, the aim is acquisition of sound experimental techniques through the synthesis of selected compounds.

Credits: 0**Room and Schedule:** Merkert Chemistry Center 130 F 01:00PM-01:50PM**Satisfies Core Requirement:** None**Prerequisites:** CHEM1110 or Note that CHEM2231 is a prerequisite for CHEM2232**Corequisites:** CHEM2233**Cross-listed with:** None**Frequency:** Every Fall**Student Level:** Undergraduate**Comments:** None**Status:** Offered**CHEM223104****Organic Chemistry I****Pratt, Jared C****Fall 2024**

CHEM335101

Analytical Chemistry

Metz, Kenneth R, PHD

Fall 2024

Designed primarily for sophomore and junior students, this course is an introduction to the principles and practice of analytical chemistry, including the statistical analysis of data and widely-used chemical methods and instrumental approaches such as chromatography, spectrophotometry, and electrochemistry. In the laboratory, the aims are for students to develop good analytical technique and to acquire accurate, precise data.

Credits: 4

CHEM446101

Biochemistry I

Zhou, Huiqing

Fall 2024

This course is a two-semester introductory-level course in biochemistry. Topics in the first semester concentrate on protein structure and function, bioenergetics, kinetics and mechanisms of enzyme reactions, intermediary metabolism, control of metabolic pathways, and photosynthesis. Topics in the second semester concentrate on the structure of nucleic acids, recombinant DNA technology, mechanisms of gene rearrangements, DNA replication, RNA synthesis and splicing, protein synthesis, control of gene expression, membrane transport, and hormone action. Experimental methods will also be discussed as they relate to course topics.

Credits: 3

Room and Schedule: Merkert Chemistry Center 127 TuTh 09:00AM-10:15AM

Satisfies Core Requirement: None

Prerequisites: CHEM2231 and BIOL2000 and CHEM2232 or equivalent.

CHEM446501

Biochemistry (Chemistry Majors)

Chatterjee, Abhishek

Fall 2024

This course is an accelerated one-semester survey of the basic principles of biochemistry emphasizing a broad understanding of the chemical events in living systems. Although the course is an introduction to biochemistry, prior proficiency in general and organic chemistry is required. Topics will include structure and function of biological molecules, including proteins, enzymes, nucleic acids and biological membranes. Also covered in the course will be bioenergetics, metabolism and photosynthesis. Experimental methods will also be discussed as they relate to course topics. This course fulfills the biochemistry requirement for the Chemistry major.

Credits: 3

Room and Schedule: Campion Hall 302 TuTh 09:00AM-10:15AM

Satisfies Core Requirement: None

Prerequisites: CHEM2232 and CHEM2231. Non-chemistry majors are requested to consult with the instructor before registering for this course.

CHEM553701**Mechanistic Organic Chemistry****Liu, Shih-Yuan****Fall 2024**

This course will explore factors influencing organic reaction mechanisms and methods for their determination. A partial list of the topics to be covered includes chemical bonding and consequences for structure and reactivity; steric, electronic, and stereoelectronic effects; conformational analysis; thermodynamic and kinetic principles; applications of molecular orbital theory; and reactive intermediates.

Credits: 3**Room and Schedule:** Merkert Chemistry Center 130 TuTh 10:30AM-11:45AM**Satisfies Core Requirement:** None**Prerequisites:** CHEM2232 or equivalent**Corequisites:** None**Cross-listed with:** None**Frequency:** Every Fall**Student Level:** Both**Comments:** None**Status:** Offered**CHEM553901****Principles and Applications of NMR Spectroscopy****Jayasundera, Thusitha****Fall 2024**

Nuclear Magnetic Resonance (NMR) is an indispensable tool for all organic chemists. This course will introduce the theory of NMR spectroscopy with concurrent experiments that illustrate these concepts firsthand, so that the subject matter is easier to absorb. Applications of NMR in biochemistry will also be discussed, with a guided, hands-on project that exemplifies how NMR is utilized to study large macromolecules (such as proteins and nucleic acids), which will provide valuable practical experience to students. Material covered in this class will prepare you well for graduate studies, or a chemistry/biochemistry-related career in industry.

Credits: 3**Room and Schedule:** Merkert Chemistry Center 130 Tu 06:00PM-08:30PM**Satisfies Core Requirement:** None**Prerequisites:** Organic Chemistry is recommended as a prerequisite.**Corequisites:** None**Cross-listed with:** None

CHEM556001

Principles of Chemical Biology

Gao, Jianmin

Fall 2024

An introduction to the chemistry of biological macromolecules, including proteins, nucleic acids, and carbohydrates. Students will learn the structure and nomenclature of the monomer building blocks as well as the macromolecules. Chemical principles that define secondary and tertiary biomolecular structure as well as state-of-the-art chemical (or chemical-biological) synthetic procedures will be presented. Examples of specific types of binding interactions, catalysis, or recognition processes as viewed from a chemical perspective will be discussed.

CHEM667601

Physical Chemistry: Principles and Applications

Bao, Junwei L

Fall 2024

This course intends to build a solid and rigorous foundation for chemistry graduate students to understand chemistry and materials at the microscopic level, and study the physical nature of bonding and chemical reaction dynamics quantitatively. We focus on fundamental principles of quantum mechanics and their connections to chemistry/chemical physics. Topics covered in this course include principles of quantum mechanics, the connections between classical and quantum dynamics, exactly solvable systems, variational principle, introductory perturbation theory, and Hartree-Fock theory. We will also cover some necessary mathematical tools that are tremendously useful in understanding modern physical chemistry.

Credits: 3

Room and Schedule: Merkert Chemistry Center 130 MWF 09:00AM-09:50AM

Satisfies Core Requirement: None

Prerequisites: This course is theory/math-intensive and involves active learning. We strongly recommend students who are well prepared in introductory quantum mechanics (one-semester undergraduate-level quantum mechanics or equivalent) and in math (multivariable c...

Spring 2025

For non-science majors or for those who do not require a lab science course.. This is a two-semester sequence. The second semester focuses on the basic principles of organic chemistry and topics covered include the chemistry of life, nutrition, medicine, and agriculture. The goal of the course is to develop a knowledge base from which one can make intelligent decisions about local global environmental issues as well as formulate solutions to the ever-increasingly complex problems of today's technological society.

Credits: 3

Room and Schedule: Fulton Hall 511 (Auditorium) TuTh 03:00PM-04:15PM

Satisfies Core Requirement: Natural Science

Prerequisites: CHEM1105 OR a high school chemistry course

Corequisites: None

Cross-listed with: None

Frequency: Every Spring

Student Level: Undergraduate

Comments: None

Status: Offered

CHEM111001

General Chemistry II**Hartmann, Nathaniel J****Spring 2025**

This course is intended for students whose major interest is science or medicine. It offers a rigorous introduction to the principles of chemistry with special emphasis on quantitative relationships, chemical equilibrium, and the structures of atoms, molecules, and crystals. The properties of the more common elements and compounds are considered against a background of these principles and the periodic table.

Credits: 3**Room and Schedule:** Devlin Hall 8 MWF 09:00AM-09:50AM**Satisfies Core Requirement:** Natural Science**Prerequisites:** CHEM1109**Corequisites:** CHEM1112**Cross-listed with:** None**Frequency:** Every Spring**Student Level:** Undergraduate**Comments:** None**Status:** Offered**CHEM111002****General Chemistry II****Mimouni, Khalil****Spring 2025**

This course is designed to prepare students for the first semester of General Chemistry. The course will consist of two major parts, the first of which will focus on the mathematical skills and problem solving that are fundamental to the deeper understanding of chemical concepts. The second part of the course will focus on the application of problem-solving techniques with basic chemical concepts such as atomic structure and isotopes, balancing chemical equations, and stoichiometry. Once they have mastered these proficiencies, students will have a strong foundation in the skills necessary to succeed in higher level chemistry courses. Although the course does meet the Natural Science Core Requirement for MCAS, students will only be granted permission to take the course based on their desire to continue on with the Chemistry curriculum.

CHEM111801

Honors Modern Chemistry II

Liu, Shih-Yuan

Spring 2025

This is the second part of a one-year course that serves as the Honors alternative to the two-semester General Chemistry CHEM1109-1110. This course will build upon the chemical fundamentals that were covered in the first semester to introduce organic chemistry as well as its physical basis. Topics to be covered include the structure and reactivity of organic compounds.

Honors Modern Chemistry II

Dai, Changhang

Spring 2025

This is the second part of a one-year course that serves as the Honors alternative to the two-semester General Chemistry CHEM1109-1110. This course will build upon the chemical fundamentals that were covered in the first semester to introduce organic chemistry as well as its physical basis. Topics to be covered include the structure and reactivity of organic compounds.

Credits: 0

Room and Schedule: Merkert Chemistry Center 127 Tu 06:00PM-06:50PM

Satisfies Core Requirement: Natural Science

Prerequisites: CHEM1117

Corequisites: CHEM1120

Cross-listed with: None

Frequency: Every Spring

CHEM112001

Honors Modern Chemistry Laboratory II

Young, Allison P

Spring 2025

Laboratory required for all students enrolled in CHEM1118. This laboratory course stresses discovery-based experiments. It uses state-of-the-art instrumentation to illustrate the principles discussed in CHEM1117-1118 and introduces students to techniques used in modern chemical research. One three-hour period per week.

Credits: 1

Room and Schedule: Merkert Chemistry Center 120 M 01:00PM-04:00PM

CHEM223201

Organic Chemistry II

Deak, Holly L

Spring 2025

An introduction to the chemistry, properties, and uses of organic compounds. The correlation of structure with properties and reaction mechanisms and the modern approach to structural and synthetic problems are stressed throughout. In the laboratory, the aim is acquisition of sound experimental techniques through the synthesis of selected compounds.

Credits: 3

Room and Schedule: Merkert Chemistry Center 127 MWF 10:00AM-10:50AM

Satisfies Core Requirement: None

Prerequisites: CHEM2231

CHEM446203

Biochemistry II

Gao, Jianmin

Spring 2025

This course is a two-semester introductory-level course in biochemistry. Topics in the first semester concentrate on protein structure and function, bioenergetics, kinetics and mechanisms of enzyme reactions, intermediary metabolism, control of metabolic pathways, and photosynthesis. Topics in the second semester concentrate on the structure of nucleic acids, recombinant DNA technology, mechanisms of gene rearrangements, DNA replication, RNA synthesis and splicing, protein synthesis, control of gene expression, membrane transport, and hormone action. Experimental methods will also be discussed as they relate to course topics.

Credits: 3

Room and Schedule: Merkert Chemistry Center 127 TuTh 09:00AM-10:15AM

Satisfies Core Requirement: None

Prerequisites: CHEM4461 and CHEM2232 or equivalent.

CHEM551001

Drug Discovery and Medicinal Chemistry

Deak, Holly L

Spring 2025

This course will provide an overview of the drug development process with an emphasis on the discovery and pre-clinical phases of developing a therapeutic agent. Students will gain an understanding of the fundamental concepts of drug design including the relationships between physicochemical properties, pharmacokinetics, pharmacology, and biological mechanism of action and the chemical structure of drug candidates. Case studies of important drugs will be invoked to facilitate discussion surrounding these topics. The chemical synthesis of these drugs will also be emphasized. The course will conclude with guest lectures from scientists at the forefront of the field. The foundational understanding of drug discovery and development gained in this course will be beneficial to those considering research and healthcare careers.

Credits: 3

Room and Schedule: Merkert Chemistry Center 130 MWF 12:00 Noon-12:50PM

Satisfies Core Requirement: None

Prerequisites: CHEM2232 or BIOL2000 recommended in addition to CHEM2232

CHEM551301

Synthetic Biology: at the interface of Biology, Chemistry, and Engineering

Chatterjee, Abhishek

Spring 2025

Traditionally, biological sciences have focused on characterizing existing biological systems. As our understanding of the natural biological systems advanced dramatically over the last century, opportunities to create 'synthetic' biological systems with novel functions emerged. Synthetic Biology is a young cross-disciplinary field that aspires to transform the promise of engineering new biological functions into a reality. Over the last two decades, synthetic biology has advanced tremendously, providing us transformative new tools to study biology, as well as powerful new therapeutic strategies that are revolutionizing modern medicine. This course will provide a primer to this discipline by introducing some of the core topics, followed by student-led discussions of recent literature.

Credits: 3

Room and Schedule: Merkert Chemistry Center 129 TuTh 12:00 Noon-01:15PM

Satisfies Core Requirement: None

Prerequisites: CHEM2231;one course in biochemistry;one semester of molecular/cell biology

CHEM552301

Organometallic Chemistry

Zhang, Xiao-Xiang

Spring 2025

The course is intended for graduate students and advanced undergraduates who have completed or are currently enrolled in organic and inorganic chemistry courses.. This course will present concepts of organometallic chemistry, e.g., the chemistry of compounds that have bonds between metals and carbon. Organotransition metal chemistry will be emphasized. Among the areas to be covered will be structure and bonding in organotransition metal complexes, ligand systems, catalysis, polymerizations, common reactions, and applications in organic synthesis.

CHEM554001

Magnetic Resonance in Biology

Jayasundera, Thusitha

Spring 2025

This course will focus on the applications of magnetic resonance in chemistry, chemical biology, biochemistry, and biophysics. Hands-on projects that deal with NMR chemical shift assignments of biological macromolecules such as proteins and oligonucleotides (DNA/RNA) form the core of the class. Related topics such as magnetic resonance imaging (MRI), NMR in metabolomics and drug discovery, dynamic nuclear polarization (DNP), and electron paramagnetic resonance (EPR) will also be discussed. Concurrent lab sessions will solve problems using magnetic resonance methods to make the experience more practical and useful.

Credits: 3

CHEM554101

Chemical Genomics and Proteomics

Bak, Daniel W

Spring 2025

The purpose of this course is to expose students to current topics in chemical genomics, chemical proteomics and related -omics sciences. The course will cover cutting-edge genomic and proteomic experimental methods and platforms as well as explore the rapidly expanding role that chemistry plays within these research areas. As an advanced biochemistry elective, students will further their knowledge of gene and protein function, biomolecular chemical modifications, cellular signaling, and drug discovery. By the end of the course, students will have: 1) a detailed understanding of the history and future direction of chemical genomics and proteomics; 2) an appreciation for the role that chemical probes, inhibitors, and small molecule libraries play in genomic and proteomic research; 3) an understanding of how to apply chemical genomics and proteomics platforms to answer specific and appropriate scientific questions; and 4) the analytical and computational skills necessary to interpret and analyze large genomic and proteomic datasets.

Polymer Chemistry

Niu, Jia

Spring 2025

This course covers modern synthetic methods in polymer chemistry and general principles that govern the unique properties of macromolecules. Synthetic methods that will be covered include radical, anionic, and cationic initiated polymerization reactions as well as metal-mediated polymerization reactions. Strategies used by chemists to control polymer molecular weight, stereochemistry (i.e., tacticity), and polymer microstructure (e.g., block, random, and alternating co-polymers) will be emphasized. Polymer characterization techniques will also be covered that include measuring molecular weight and molecular weight distributions, and determining polymer thermal and mechanical properties. To complement tutorial-style lectures, this course also consists of seminar-style talks given by the instructors and invited speakers on contemporary research topics in polymer science that cover a wide range of topics, such as conductive polymers, fluoropolymers, sequence-controlled polymers, biomaterials, sustainable polymers, polymer networks, drug delivery, and mechanochemistry.

CHEM555201

Advanced Methods in Chemistry I

Metz, Kenneth R, PHD

Spring 2025

This course discusses the principles, methods, and applications of instrumental techniques such as calorimetry, chromatography, lasers, and optical spectroscopy in modern chemistry, along with techniques for the analysis and interpretation of experimental data. It is intended mainly for third year students. The accompanying laboratory includes experiments with these methods and emphasizes experimental design, data interpretation, and the presentation of results in written and oral formats.

Credits: 4

CHEM556101

Principles and Methods in Biophysical Chemistry

Zhou, Huiqing

Spring 2025

This course is an introduction to the key principles and experimental methods of contemporary biophysics and biophysical chemistry. The course primarily discusses the structures and dynamics of biomolecules (such as nucleic acids and proteins), including the biophysical principles and measurements for biomolecular folding/unfolding, as well as determination of biomolecular structure and dynamics by methods such as X-ray crystallography, cryogenic electron microscopy, and Nuclear Magnetic Resonance spectroscopy. Critical evaluations of determined structures by selected methods and applications of structural biology will be emphasized. The course will also cover principles and methods for determining ligand binding to biological macromolecules.

Credits: 3

Room and Schedule: Merkert Chemistry Center 129 TuTh 10:30AM-11:45AM

Satisfies Core Requirement: None

Prerequisites: CHEM4461 or CHEM4465 or BIOL4350 or equivalent; a physical chemistry course is NOT required as a pre- or co-requisite

CHEM557501

Introduction to Spectroscopy

Huang, Jier

Spring 2025

Broadly defined, spectroscopy is the study of the interaction of electromagnetic radiation with matter. For the chemist, spectroscopy is a powerful tool for determining molecular structure and dynamics. This course will focus on the techniques most applied in chemistry including rotational, vibrational and electronic spectroscopy. The topics to be covered include light-matter interaction, group theory and various types of spectroscopy techniques. The student will gain familiarity with the basic principles and methods of spectroscopy, be able to discuss the information gleaned from each type of spectroscopic method, and become proficient in the application of group theoretical methods to determine transition selection rules.

CLAS118601

Greek Civilization

Hoffman, Gail L

Fall 2024

An introduction to the art and archaeology, cultural history, and literature of ancient Greece from the Late Bronze Age to the end of the Peloponnesian War (ca. 2000-400 BCE). Readings in the Iliad, Herodotus, and Thucydides, examine how the Trojan, Persian, and Peloponnesian Wars molded Greek civilization. While art and archaeology provide a counterpoint for the broader study of Greek culture.

Greeks and Barbarians

Thatcher, Mark R

Fall 2024

In "Greeks and Barbarians," we'll use a combination of written sources, archaeological evidence, and even visual art to investigate the fascinating history of relationships and conflicts between Greeks, Persians, Egyptians, Carthaginians, and more. We'll read a variety of literature in English, such as the histories of Herodotus and Xenophon, the tragedies of Aeschylus and Euripides, and more, to help us figure out what Greeks really thought about barbarians - and about themselves.

CLAS223001

Classical Mythology

Eisenfeld, Hanne E

Fall 2024

This course explores the mythology of ancient Greece, Rome, and the Near East within its cultural, political, historical, and religious contexts. You will meet (or renew your acquaintance with) mythical figures like Zeus, Gilgamesh, Medusa, and Helen as they appear in multiple literary genres and other artistic media. In order to analyze and interrogate these myths we will use ancient and modern frameworks for thinking about what mythology is and what it does. What can a myth tell us about the civilization that created, adopted, or adapted it? What do our uses of Classical mythology--and our creations of our own myths--tell us about ourselves?

CLAS229401

Greco-Roman Egypt

Sapsford, Thomas D

Fall 2024

Under rule by the Ptolemaic dynasty, Egypt became the cultural hub of the ancient Mediterranean; when governed by Rome, it provided natural resources to a vast empire. But what of its multiethnic and multilingual population (the indigenous Egyptians, Nubians, Jews, Romans, Greeks, Arabs who inhabited it) and how did Egypt in this period relate to the rest of Africa and neighboring ancient civilizations? By studying literary, documentary, and visual sources, we will examine several fascinating historical figures such as Alexander the Great, Ptolemy Philadelphus, and perhaps the most notorious woman in antiquity, Cleopatra VII. Students will also encounter first-hand evidence of daily life in this region through letters, contracts, petitions, and arrest warrants recorded on potsherds and papyri and preserved for millennia by the desert sands.

CLAS333801

Cicero and Sallust: *Catiline*

Eshleman, Kendra J

Fall 2024

The failed conspiracy of Catiline occupies a pivotal point in the dissolution of the Roman republic. Falling between the civil wars of Sulla (88-81 BCE) and Caesar (49-46 BCE), Catilines uprising (63 BCE) is part of the long aftermath of the former and representative of (and contributing to) the social and political breakdown that led to the latter. It is also one of the best attested episodes from the late Republic, the subject of four Ciceronian speeches (and mentioned in many of his other works) and a monograph by the historian Sallust. In this advanced Latin class, we will read Sallusts *Bellum Catilinae* and Ciceros First Catilinarian in Latin, and the rest of Ciceros Catilinarian orations in English. Topics will include the place of this episode in the political history of the late Republic, its representation by Cicero and Sallust, and the broader historiographic issues it raises. Graduate students will read in addition select letters of Cicero.

CLAS335001

Catullus

Polt, Christopher B

Fall 2024

The Roman poet Gaius Valerius Catullus offers a rare and tantalizing glimpse at the private lives of Roman elites at the end of the Republic. In this course we will examine his work and what it can show us about ancient Roman relationships social and erotic as well its place within the broader literary tradition. Readings will be in Latin.

CLAS338201

Herodotus I

Thatcher, Mark R

Fall 2024

Father of History, Father of Lies, Herodotus marks the beginning of the Greco-Roman historiographic tradition. In this class, we will read portions of books 1 and 8 of the Histories in Greek, and sections of the rest of the work in English. Central issues will include the nature, methods, and principles of Herodotean historiography, his relationship to earlier poetic and prose traditions and to the intellectual and political climate of the fifth century BCE, and social, cultural, political issues raised by the work, and the historical events it chronicles--especially, but hardly limited to, the Persian Wars.

CLAS428001

Beast Literature

Polt, Christopher B

Fall 2024

From Aesop's fables to animated films, philosophical dialogues to furry graphic novels, we often imagine animals speaking as humans do. But what are we saying when we use animals to talk with and about one another and ourselves? And what do cultural products featuring articulate beasts say about our attitudes towards humans and animals and the lines that we draw between them? This course examines animal anthropomorphism as a mode of thought and expression in ancient Greece and Rome, Medieval Europe, and the modern world. Please contact Prof. Polt (polt@bc.edu) directly for permission to enroll in this course.

Greek History

Thatcher, Mark R

Spring 2025

A study of the history of Greece from the Bronze Age in the second millennium BCE to the preeminence of Alexander of Macedon in the 4th century. The course will focus on such broad topics as the development of Greek social and political institutions, notions of justice, freedom, and Greek identity, relations among Greek city-states and with foreign nations, imperialism, the golden age of Greek literature, and the rise of Macedonian monarchy. Emphasis will be on the study of the ancient sources: literary, historiographic, archaeological, and epigraphic.

Art and Myth in Ancient Greece

Hoffman, Gail L

Spring 2025

An introduction to the visual representation of the Greek gods and goddesses and to the artistic depiction of the primary cycles of Greek legends (e.g., the Trojan War and heroes such as Herakles, Perseus, and Theseus). This course focuses on how specific visual attributes serve to identify mythological characters and how the development of narrative in Greek art helped to relate their stories. Inquiring into the use of mythological imagery to decorate temples, cult statues, and vases used primarily for the symposium (male drinking parties), we will consider the functions of mythological imagery within Greek society.

CLAS224201

Roman Religion

Eshleman, Kendra J

Spring 2025

The Romans lived in a world full of gods; religion affected every part of Roman life, from politics to warfare to entertainment. Christianity took shape within this world, and Roman religion, especially the mystery cults, has often been regarded as a model for the early church. Yet the Roman concept of 'religion' has very little in common with modern, Judeo-Christian-influenced notions. In this class we will explore the theory and practice of religion in the ancient Roman world, as reflected in ancient literary texts, as well as in epigraphic and archaeological evidence. Themes include the nature of Roman worship, from state cult to magic and mysteries, the interplay between religion and politics, and the development of Christianity in its pagan context.

CLAS226201

The City of Rome

Polt, Christopher B

Spring 2025

What was a normal day like for ancient Romans? What did they see, hear, and do while going about their lives? How did those things change as Rome shifted from a Republic to an Empire and as their city became caput mundi ("Head of the World")? In this course we will reconstruct the lived experiences of Romans by examining Rome's urban spaces through art, architecture, artifacts, and texts. Along the way, we will explore: public buildings, mundane and monumental; recreation (baths, theaters, arenas); civic infrastructure (aqueducts, sewers, roads); economy and commerce (shopping, harbors, slavery); gender and sexuality (domestic spaces, brothels); religion (temples, sacrifices, funerals); and other topics as appropriate.

Livy

Eshleman, Kendra J

Spring 2025

In the last two decades, the study of the Augustan historian Livy has undergone a renaissance. Once scorned as a dull compiler and apologist for the Augustan regime, Livy is now recognized not only as a masterful stylist but also as a subtle and challenging thinker. In this class, we will focus on his history of early Rome, reading portions of books 1 and 5 in Latin, and other selections from the first pentad in English. Major themes will include women, religion, and political power in the *Ab Urbe Condita*, the relationship between Livy's work and the Augustan principate, Livy's methods as a historian, and the larger, related problems of the character of ancient historiography and our knowledge of early Roman history generally.

Sex, Power, Gods: Ancient Wisdom Literature

Eisenfeld, Hanne E

Spring 2025

Being a human in the world comes with a lot of questions: Why is love so distracting? What is the correct use of power? How can we live together in communities? Why is there suffering? In this course we will consider perspectives on these questions and more from around the ancient Mediterranean preserved in Mesopotamian and Egyptian advice texts, biblical books like Ecclesiastes and Job, Greek epic poetry, and Roman proverbs. We will also consider where we might find modern parallels to this ancient wisdom literature and how we might effectively communicate our own wisdom.

The Art of The Interview

Citorik, Christopher

Summer 2024

This course may be used to satisfy one of four elective courses required within the Communication major. This course offers a comprehensive study of the practice of interviewing in a variety of formats and from both sides of the equation. Students will analyze and discuss historically significant interviews, learn and practice interviewing techniques, and study and implement strategies to be a better interviewees. By understanding both how to conduct a successful interview and how to give compelling answers when being interviewed, students will obtain a thorough understanding of how to successfully use interviews as a method of communication and form of content creation. Throughout the course, students will apply the concepts, theories, and techniques discussed by conducting professional-style interviews in multiple formats (audio and video), allowing them to fully synthesize the material and become more effective communicators, whether on-mic or not.

Free Speech and Social Change

Ingram, Brett D

Summer 2024

This course satisfies one of four elective courses required within the Communication major. This course will critically examine conflicts and controversies about freedom of speech in the United States, and will center on interrelated questions such as: what limits (if any) should be put on citizens' right to express their thoughts in the public sphere? Where should we draw the line that distinguishes an intelligible political position from an incendiary incitement to violence? Should certain cultural arenas--such as art, religion, or comedy--be exempt from commonly held norms concerning free speech? Do restrictions on free speech help or hinder activist movements that seek to redistribute power and resources in society? We will survey the philosophical foundations of free speech in Western society, review the history of the free speech debate, and engage a series of contemporary case studies concerning free speech on campuses, in media, and in politics.

Satisfies one of two writing intensive courses required within the Communication major. Restricted to Juniors and Seniors.. This course is designed to examine events and situations that potentially threaten the viability of an organization. Attention is devoted to developing an effective crisis communication plan, speaking to multiple stakeholders, decision-making under pressure, and resolving--rather than litigating--organizational problems. Among the studies examined are the Tylenol product tampering incident, the Exxon Valdez accident, the Union Carbide gas leak, the Challenger Space Shuttle disaster, the Three Mile Island accident, and the Pepsi syringe hoax.

COMM102001

Introduction to Media Studies

Hogan, Lindsay R

Fall 2024

Required course for all Communication majors. This course was previously called Survey of Mass Communication. Students who took COMM1020 Survey of Mass Communication may not register for COMM1020 Introduction to Media Studies This course will introduce you to the basics of the field, including industries, industry trends, regulations, and ethics. It will address historical developments that have shaped the mass media, particularly through the rise of newspaper, book, music, radio, television, film, advertising, and public relations industries. It will consider the influences of new media and their impacts on culture and industry. It will explore topics such as blockbusters, globalization, digital photography, social media, sports, "fake news," fans and fan cultures, and media violence. Further, it will ask you to consider your position as a media consumer.

COMM106001

Anti-Social Media

Hartnett, Kristin A

Fall 2024

This is a one-credit Pass/Fail course. Do you ever wonder what toll social media might be taking on your mental health? Do you long to 'break up' with your phone and live in the moment? This one-credit (pass-fail) seminar examines student anxieties about technology habits and experiments with practices of mindfulness. The course orients you to think and act more purposefully as a 'whole person'--in keeping with the Jesuit ideals of attentiveness and character formation--as opposed to one who is screen-dependent. Short readings, fun viewings, meditative journal entries, and small-class discussions will focus on the social, psychological, and emotional consequences of digital experiences (including friendships, learning, privacy, dating, and so on). Students will also set one #goal per month, of their choosing, to try to live differently with their tech habits--self-examining how that change feels and what insights emerge.

Communicating the Sacred in Jewish Tradition

Sienkiewicz, Matthew S

Fall 2024

This one-credit pass/fail course allows students to engage in the close reading of selected sacred Jewish texts. Students will, as a group, choose Talmudic and Halakhic works to read together and discuss along with the instructor. The course readings will be assigned in English translation, although students are encouraged to explore the original Hebrew and Aramaic. This course credit counts towards Boston College's Jewish Studies Minor.

COMM190201

Digital Storytelling

Reynolds, Paul A

Fall 2024

This is a one-credit pass/fail course. Storytelling is an essential part of every community, organization, and business. However, the channels through which stories are told have evolved. With the advent of the internet, digital media now combines tradition with technology. Narratives can be told in new, multidimensional ways with video, audio, blogs, text, images, and graphics. The purpose of this course is to help you understand why communication professionals and civilizations throughout human history create and value stories. You will also learn how to employ a variety of digital technologies to create compelling content. This will be achieved by examining the underlying concepts and technical processes involved in telling stories for delivery on the desktop, the mobile device or tablet.

Introduction to Feminisms

Barko, Emily B

Fall 2024

This course may be used to satisfy one of four electives required within the Communication major. Fulfills Women Writer's requirement for ENGL/LSOE majors. This introductory course offers both an overview and a foundation for understanding the various movements that make up what has come to be called the feminist movement in the U.S. Because systems of privilege and disadvantage shape women's and men's identities and social positions in multiple and unique ways, Introduction to Feminisms analyzes gender from an interdisciplinary approach and applies numerous academic disciplinary methods to the study of gender, including history, literature, psychology, and sociology, and explores women's and men's experiences within various cultural contexts, including socioeconomic class, race, and ethnicity, religion and spirituality, nations of citizenship, origin, and generation.

COMM218201

Black Popular Culture

Madenga, Florence

Fall 2024

This course may be used to satisfy one of four electives required within the Communication major. In this class, we will critically examine the development of black popular culture from blackface minstrelsy in the 1800s to present day. While we will primarily focus on black popular culture in the United States, we will also consider the work of diasporic authors and artists and the international implications of American media. Readings will draw upon theories and concepts in media studies, cultural studies, and rhetoric to center our discussion of black popular cultural texts such as television shows, films, music, poetry, and fashion.

Sports, Media, Culture

Serazio, Michael J

Fall 2024

This course may be used to satisfy one of four electives required within the Communication major. Sports have long played a vital yet complex role in culture and this course examines that intersection of sports, the mass media, and society. We will appraise and debate the ways in which sports are functional or problematic in their impact on and relationship to players, fans, journalists, co-cultural groups, and nations. Students will read both scholarly and journalistic reflections, view popular and documentary film, and analyze fan experiences, mediated presentations, and critical social issues. In short, we will go beyond the box score to understand the importance and deconstruct the hype that accompanies modern sports.

COMM222101

Digital Media Field Production

Howley, Richard J

Fall 2024

This course may be used to satisfy one of four electives required within the Communication major. With the ubiquitous nature of video streaming on desktops, mobile phones and tablets, the influence of video storytelling has never been greater or more pervasive and the demand for skilled digital storytellers to fill those increasingly ubiquitous screens is stronger than ever. This course offers professional guidance and hands-on experience to develop the skills, techniques, and disciplines necessary for the creation of digital media produced in the field. Students will write and produce their own video programs, becoming familiar with all aspects of production and post-production, including producing, performing, directing, single-camera shooting, sound recording, and location lighting, as well as editing, digital effects, and graphics. In the process, students will develop a discerning eye for what makes an effective, professional, aesthetically pleasing video production, while they build a portfolio that can be used during job or graduate program interviews.

COMM222201

Studio Television Production

Reynolds, Paul A

Fall 2024

This course may be used to satisfy one of four electives required within the Communication major. This course is designed to introduce students to the theories, tools, and techniques of television production. The focus of this class is on developing the production skills necessary for creating effective television communication. To pursue this goal, students will combine the information from the course's texts with practical experience in the form of exercises and the creation of their own television programs. While producing and directing their programs, students, working in crews, will learn to operate studio television equipment and develop an understanding of how messages are communicated using "live" or "life-on-tape" production methods.

COMM222901

Food, Media, and Culture

Tran, Anthony D

Fall 2024

This course may be used to satisfy one of four electives required within the Communication major. Beyond providing sustenance, food has become increasingly important in how we communicate our cultural identities, politics, and tastes with ourselves and others. This class will explore the complex intersections of food, media, and culture to analyze the various ways mediated food operates as communicative practices in our everyday lives. This course will examine topics such as the history of food on television, communicating nationalism through culinary discourses, online debates over authentic foods, global flows of food documentaries, dieting and foodie culture in social media, YouTube food tutorials as cultural maintenance, online food activism, and the racialization of ethnic foods in popular culture. Grading will be based on classroom discussion, essay-based exams, and interactive group-work.

COMM224001

Memory and Media

Pastel, Renee L

Fall 2024

This course may be used to satisfy one of four electives required within the Communication major. This course focuses on the relationship between memory and moving images. How can film, television, and online video capture and reproduce memory? What role can moving images play in shaping memory, both on an individual and collective level? What claims does the medium make about accurately presenting the past? Through close analysis of film, television, and digital media, we will practice making textually-grounded arguments about specific works while thinking about the broader implications for understanding media and memory. Drawing on material from a variety of time periods and genres, we will use moving images to explore how remembering (and forgetting) shapes a narrative, both on and off the screen.

Through close analysis of film, television, and digital media, we will practice making textually-grounded arguments about specific works while thinking about the broader implications for understanding media and memory. Drawing on material from a variety of time periods and genres, we will use moving images to explore how remembering (and forgetting) shapes a narrative, both on and off the screen.

Covering Sports in the Digital Age

Cotillo, Christopher G

Fall 2024

This course may be used to satisfy one of four electives required within the Communication major. This course will introduce students to the theoretical and practical elements of covering sports in the age of digital media convergence. Taught by an experienced practitioner, the class will both review the history of sports media and offer students the opportunity to produce original creative work suited for online distribution. Topics will include journalistic ethics, social media strategies, social justice in sports coverage, and the practicalities of reporting and story construction. Students will be evaluated both via exams and through the submission of a creative portfolio.

COMM225001

Media Ethics in the Digital Age

Breen, Marcus J

Fall 2024

This course may be used to satisfy one of four electives required within the Communication major. This course gives students an understanding of the ethical dimensions of communication in an accelerating digital world. Drawing on philosophical principles that resonate with Jesuit values, students will learn to identify, evaluate, and where possible interpret moral conflicts in the media and communication environment, in the media industry, and between the industry and the public. Rather than look at ethical conflicts strictly from a Western lens, the course introduces the students to a variety of philosophical and cultural models. Using a case study approach, the course addresses various contemporary ethical concerns, such as social media and mental health, misinformation, hate speech, extremist content, documentaries, alternative business models for journalism, international and cross-cultural issues, commodity activism, guerilla marketing, entertainment, privacy, doxing, and copyright.

Influencer Culture

Peterson, Kristin M

Fall 2024

This course may be used to satisfy one of four required electives within the Communication major. The expansion of social media platforms and algorithmic digital content has seen the emergence of the influencer, an individual who builds a following and markets various products and services through branding their own lifestyle. This course will examine the historical predecessors to contemporary influencers, such as celebrity culture, reality TV, tabloids, TV talk shows, lifestyle magazines, and blogging. Students will also analyze contemporary cases in relation to theories around influence, celebrity, authenticity, authority, and therapeutic culture. The influencer industry will be used as the lens to explore various themes in contemporary digital culture, such as the political economy of social media, marketing, algorithms, gender, racial identity, class, spirituality, wellness, mental health, misinformation, political activism, aesthetic styles, and exploitation of labor.

Global Cultures and Creative Industries

Sienkiewicz, Matthew S

Fall 2024

This course may be used to satisfy one of four electives required within the Communication major. This course studies global film, television, publishing and fine art as both opportunities for creative expression and business ventures forged in the international marketplace. Considering culture both as a complex meaning-making activity and as a commodity of economic exchange, the class offers a unique, multi-perspectival approach to the phenomenon of globalization. Case studies will include Bollywood film, Israeli television dramas, Russian foreign broadcasting, The Harry Potter franchise, and many others.

Theory, History and Practice of Talk Media

Citorik, Christopher

Fall 2024

This course may be used to satisfy one of four elective courses required within the Communication major. This course offers an overview of the historical, theoretical, and practical elements of American talk media from the dawn of broadcasting to today. Beginning with early US radio, the class considers the ways in which economics, politics, technology, and culture have shaped American public discourse. The course concludes by giving students an opportunity to produce their own podcast, teaching skills that will allow them to not only create professional content, but also to understand better the communication history and theory they have studied throughout the semester.

Communicating Nonverbal Messages

Duggan, Ashley P

Fall 2024

This Course may be used to satisfy one of four electives required within the Communication major. This course will explore different aspects of nonverbal communication (body language, facial expression, physical appearance, etc.) and the many ways in which they impact our lives. Class activities and discussions will be applicable directly to relationships with friends, family, and romantic partners. By the time you complete this course, you will have acquired a resource-base to understand why and how nonverbal signals are used to communicate, to understand the role of theory related to nonverbal communication, and to improve your ability to apply these principles to your day-to-day interpersonal relationships and work settings.

COMM228101

Critical Challenges: AI in an Evolving Crisis

Breen, Marcus J

Fall 2024

This course may be used to satisfy one of four required elective courses within the Communication major. Artificial Intelligence (AI) lends itself to a multidisciplinary investigation of communication, media, and human ingenuity, freighted with philosophical questions about the meaning of life as it is impacted by technologies whose processes surpass human cognitive capacities. The investigation incorporates communication theory and social theory and practice as techno-social formations in a dynamic relationship. Key questions emerge from the rise of AI in public as a disruptive force driving the use of digital technologies. How should we respond to the rise of AI in everyday life when it has the capacity to overtake human decision-making and cognition? How to manage it in universities and professional life? At a more practical level, how should professors and students address the emergence of the AI language model known as ChatGPT? These and other questions are located in this course within the history of debates and fears about AI. Students will be invited to write short commentary pieces and occasional essays that reflectively and critically explore AI, as well as engage with each other using expressions of humanistic performance.

Researching Big Data and Artificial Intelligence

Jang, Seung M

Fall 2024

This course may be used to satisfy one of four electives required within the Communication major. This course is designed to develop an understanding of big data and artificial intelligence from social science perspectives. Students will critically interpret the distinctive paradigms of emerging research with digital social media data (big data) by engaging with case studies and theoretical frameworks. They will also discuss challenges and opportunities AI presents and how it shapes our understanding of human communication and society. The subtopics include human-AI interactions, social media analytics, algorithm-based discrimination, social media-related policy, misinformation, and machine learning.

Jewish Media, Arts, and Culture

Pickette, Samantha Lynn

Fall 2024

This course may be used to satisfy one of four electives required within the Communication major. This course looks at current trends in Jewish cultural creativity, considering both diasporic and Israeli film, television, literature, and visual arts. Designed for students with limited knowledge of Judaism and Jewish culture, the class surveys Jewish religious practice, political history, and traditions of cultural expression as it examines media sources that embody, advance, and grapple with ideas from the Jewish past and present. Topics include, but are not limited to, Jewish comedy, Jewish children's media, Jewish memory, the globalization of Israeli television, and Yiddish language media.

COMM228601

International and Intercultural Communication

Erol, Ali Ersen

Fall 2024

This course may be used to satisfy one of four electives required within the Communication major. Intercultural Communication explores the complexities of communication across cultural boundaries and power differentials. This course delves into the historical, social, and theoretical underpinnings of intercultural communication, aiming to equip students with the skills and perspectives necessary for engaging issues related (in)justice, fairness, (in)equality in intercultural contexts. Through critical examination of concepts such as culture, identity, power, and globalization, students will gain insights into the intricate dynamics that shape intercultural interactions. Drawing from critical theory, the course emphasizes the importance of interrogating existing power structures and perspectives, particularly those marginalized based on factors such as race, gender, class, ability, and sexuality. Topics covered include the historical development of intercultural communication, imperialism, orientalism, globalization and nation-states, migration and diasporas, cosmopolitanism, multiculturalism, gender and sexuality, technology's impact on communication, conflict resolution, intercultural listening, and approaches to justice and worldmaking. Each week integrates case studies, self-reflection exercises, discussion questions, and activities to facilitate deep engagement with the material. By the end of the course, students will have developed a nuanced understanding of intercultural communication dynamics and enhanced their ability to navigate diverse cultural contexts with sensitivity, empathy, and respect.

COMM228701

Totalitarianism in Representation and Reality

Ingram, Brett D

Fall 2024

This course may be used to satisfy one of four required electives within the Communication major. This course will critically examine the discourses, practices, and psychological foundations of totalitarian forms of government. Totalitarianism refers to a system of social organization that subordinates the free will of individuals/subjects and cultural institutions to the dictates of the state, which is helmed by a charismatic leader. Under totalitarianism, every aspect of an individual's life falls under the jurisdiction of the ruling party, allowing little space for independent thought, expression, or action. This course will focus on historical examples of totalitarian rule, with particular emphasis on Nazi Germany and Soviet Russia, and contemporary manifestations in the West and Middle East. We will also consider the ethics and effectiveness of various modes of resistance to totalitarianism. Students will analyze and critique the rhetoric and imagery of totalitarianism in literature, film, and media and develop a greater understanding of the dangerous appeal of this ideology for many people in the past, present, and, perhaps, the future.

Multimedia Journalism

Helman, Scott W

Fall 2024

Note to Journalism minors: this course satisfies the requirement for an elective with a craft" orientation. This class will explore multimedia storytelling as both an evolving genre and professional practice. We'll do plenty of hands-on work, but we'll also spend time pondering the theories behind our technical and creative decisions. What skills must modern storytellers possess to thrive in an increasingly digital world? How do we pick the right tool for the job? What principles of journalistic storytelling might be applicable to journalism-adjacent digital content? This is a survey course, which means we'll touch on various modes of digital journalism, including audio and video storytelling two skills integral to modern newsrooms.

COMM230001

The Press & the Presidency

Helman, Scott W

Fall 2024

Note to Journalism minors: this course satisfies the requirement for an elective with a "critical" orientation. Every four years, the media gets one of its most challenging but exhilarating assignments: covering an American presidential campaign. With the 2024 race as a backdrop, this class will explore how campaign journalism has evolved over recent presidential cycles and the pressures facing political writers today, including a polarized electorate, social media in hyperdrive, and disinformation and deep fakes. This class will take a critical look at presidential campaign reporting past and present, but also give students a tactile understanding of what it takes to produce solid political journalism from coverage of debates and campaign finances to policy issues, voter sentiment, and polling.

COMM336001**Communication Methods:** Mixed Methodology**Wells, Celeste C****Fall 2024**

One of COMM3330, COMM3340, or COMM3360 is required for the Communication Major. This course is an interdisciplinary exploration of both qualitative and quantitative methodologies essential for understanding human communication. The course begins by examining the meaning and process of communication research across different traditions, providing students with a foundational understanding of research paradigms. Through a step-by-step approach, students will learn research design, data collection, analysis and interpretation, and research conclusion techniques. Emphasizing a comprehensive understanding of research processes, the course bridges the gap between theoretical frameworks and practical applications. In addition to lectures, students will engage in workshops to practice analysis methods learned in class, fostering hands-on experience and skill development. We will analyze various articles across disciplines and methodologies to examine the best (and the worst) practices in conducting and presenting research. This course is vital for succeeding in writing-intensive courses.

Film Theory and Criticism

Pastel, Renee L

Fall 2024

Satisfies the required theory course in the Communication major This course is structured around the question of how visual media convey and influence the world in which they are created. By surveying some of the major questions raised by theorists from the beginnings of film as a medium to the present, students will gain critical lenses through which to historically and theoretically engage visual media. We will cover topics including: film aesthetics; Marxist, psychoanalytic, feminist, critical race, and queer theoretical approaches to film criticism; television studies; and new media theories. Students will learn how to analyze film on a formal level, taking into account how form creates meaning, and to think historically and theoretically about how film as art and commerce has contributed to shaping "smaller screen" media forms and understandings.

This course is both a writing-intensive seminar and a Women's and Gender Studies minor course. Focus is on the social construction of gender through communication. The early section of the course compares historical and theoretical approaches to representations of gender in communication texts. Then, building on these comparisons, students read about, examine, and analyze texts, focusing particularly on television programming and advertising.

COMM445201

News Media/Democracy

Serazio, Michael J

Fall 2024

Satisfies one of two required writing-intensive courses for Communication majorsThe press plays an essential role in America and the world. This course aims to equip students to become critical news consumers with both a skilled understanding of how journalism works and political literacy about the big issues of our time. Through classic scholarly reflections as well as contemporary punditry examples, we will tackle the news media critically across three dimensions: learning about its indispensable function in mediating politics and democracy throughout history and today; studying and practicing the craft of opining writing and social advocacy; and evaluating and critiquing the performance of the press across these fronts.

Children and the Media

Hogan, Lindsay R

Fall 2024

Satisfies one of two writing intensive courses required within the Communication major. Restricted to Juniors and Seniors.. From film to television to mobile apps, this course examines children's media as an economic, cultural, and political entity and explores the relationships among young people and the contemporary media environment. Students will analyze various scholarly approaches and major debates in the study of children and media while also learning the larger historical contexts of those debates. This course offers a critical/cultural approach that examines the ways in which media industries, institutions, technologies, and texts intersect to produce particular media practices and considers how such practices relate to the production of cultural norms or social power.

COMM447401

Digital Gaming and Gaming Cultures

Erol, Ali Ersen

Fall 2024

Satisfies one of two writing-intensive courses required within the Communication major. The purpose of this course is to understand the place of games and gaming in contemporary culture. While the course starts with an introduction to games and gaming in a general sense, most of the content is focused on video games and digital gaming culture including but not limited to the interaction between cultural context game design, game dialogue and content, identity representation in video games, game-book-movie adaptations, as well as issues such as gamergate, esports competitions, microtransactions, and exploitation and harassment in the gaming industry. In other words, this course takes digital gaming as a cultural text and approaches it from a multidisciplinary perspective. Our aim is to move from mindless consumption of video games to understanding them as any other cultural text that needs to be approached with care and critical thought. This course will meet regularly in our gaming lab. We will have lecture times as well as gaming lab times. Our gaming lab times will be dedicated to playing and analyzing games that had an important impact on the industry as well as on the players. Moreover, this is a writing-intensive course that requires a 25-page research paper that the student is expected to undertake through the course of the semester. The topic of the research paper needs to be about games or gaming culture, though the students can shape their research paper based on where their interest lies relative to the topic at hand.

Screening Genre in the United States

Truelove, Joshua M

Fall 2024

Satisfies one of two writing intensive courses required with the Communication major. Restricted to Juniors and Seniors. This course explores the evolution of film and television genre in the United States. By examining the sociopolitical context of different eras, students will have the opportunity to gain an understanding of how political ideologies, major historical events, cultural shifts, and technological advancements impact the production of television and film in different genres. Students will also have the opportunity to engage with television and film analysis theories and methods to investigate the impact screening genre and American sociopolitical culture have on one another.

Internship Practicum

Caswell, Christine A

Fall 2024

This course may not be repeated. This course may be used to satisfy one of four elective courses required within the Communication major. This course gives Communication majors with junior or senior standing an opportunity to pursue a 15-20 hour per week internship in a specific field of Communication. Practical experience will be supplemented by discussions of relevant theoretical constructs. Periodic discussion group seminars will enhance a student's immersion in the industry. Adherence to professional protocol is expected. A field research paper is required as well as supervisor evaluations. This course counts as a 3-credit Communication elective. Instructor permission is required for enrollment. This course may also count for LSEHD students' required practicum;permission from Dean DeVoy is required for LSEHD students.

Translating Theory to Practice

Hogan, Lindsay R

Spring 2025

This is a one-credit Pass/Fall course. As a Communication student at Boston College you have been, and will continue to be, provided with numerous opportunities to learn about communication at both theoretical and practical levels in multiple areas within our discipline (e.g., media, rhetoric, culture, gender, health, interpersonal, family). The objective of this course is to assist in you in discerning how your education in the field of communication will prepare you to ask and eventually answer questions about your life, vocation, and role in the lives of others. Each week, a Communication department faculty member or guest speaker from the professional world will address a topic relevant to students on the precipice of entering the workforce, including (but not limited to): how to discuss academic research in language that resonates with employers in fields such as public advocacy, broadcasting, advertising, public relations, and consulting; whether/how to pursue graduate study; and how to present your self in job applications and interviews.

COMM106001

Anti-Social Media

Serazio, Michael J

Spring 2025

This is a one-credit Pass/Fail course. Do you ever wonder what toll social media might be taking on your mental health? Do you long to 'break up' with your phone and live in the moment? This one-credit (pass-fail) seminar examines student anxieties about technology habits and experiments with practices of mindfulness. The course orients you to think and act more purposefully as a 'whole person'--in keeping with the Jesuit ideals of attentiveness and character formation--as opposed to one who is screen-dependent. Short readings, fun viewings, meditative journal entries, and small-class discussions will focus on the social, psychological, and emotional consequences of digital experiences (including friendships, learning, privacy, dating, and so on). Students will also set one #goal per month, of their choosing, to try to live differently with their tech habits--self-examining how that change feels and what insights emerge.

COMM106601

Communicating Jewish Identity

Sienkiewicz, Matthew S

Spring 2025

This is a one-credit pass/fail course. This one-credit pass/fail course gives students the opportunity to learn about and discuss a variety of approaches to Jewish Identity. Topics will include religious practice, secular movements, antisemitism, Israel, and more. Course materials will range from scholarly studies to popular literature to personal reflections. Students enrolled in the course are expected to read and actively discuss the material each week in order to receive credit.

Following Global News

Davidzon, Vladislav

Spring 2025

This is a one-credit pass/fail course. This one-credit course allows students to follow current events alongside a working professional international journalist. Each week students will read news from a range of media platforms and offer written reflections on what they have read. They will then engage in class discussions considering both the news content and how financial pressures, social media algorithms, professional journalistic conventions and other factors shape current events coverage across the world.

Disney: American Social Norms and Values

Rosenthal, Rita

Spring 2025

This is an Enduring Question course and is open to FRESHMEN only. You must take both COMM1701 and ENGL1725. What role do literature and popular culture play in shaping our views and decisions about social and political matters? These paired courses investigate different aspects of Disney. In one course, students will explore the history of folk tales and their movement around the world. Source material will include Grimm, Perrault, Anderson, and others, and students will focus on the ways tales have been altered by Disney for their movies. In the other course, students will examine how Disney influences society's views of acceptable and preferable social constructs. By analyzing Disney's media and other cultural products, students will assess the implications and global impact of their persuasive messages.

Digital Storytelling

Reynolds, Paul A

Spring 2025

This is a one-credit pass/fail course. Storytelling is an essential part of every community, organization, and business. However, the channels through which stories are told have evolved. With the advent of the internet, digital media now combines tradition with technology. Narratives can be told in new, multidimensional ways with video, audio, blogs, text, images, and graphics. The purpose of this course is to help you understand why communication professionals and civilizations throughout human history create and value stories. You will also learn how to employ a variety of digital technologies to create compelling content. This will be achieved by examining the underlying concepts and technical processes involved in telling stories for delivery on the desktop, the mobile device or tablet.

Introduction to Feminisms

Barko, Emily B

Spring 2025

This course may be used to satisfy one of four electives required within the Communication major. Fulfills Women Writer's requirement for ENGL/LSOE majors. This introductory course offers both an overview and a foundation for understanding the various movements that make up what has come to be called the feminist movement in the U.S. Because systems of privilege and disadvantage shape women's and men's identities and social positions in multiple and unique ways, Introduction to Feminisms analyzes gender from an interdisciplinary approach and applies numerous academic disciplinary methods to the study of gender, including history, literature, psychology, and sociology, and explores women's and men's experiences within various cultural contexts, including socioeconomic class, race, and ethnicity, religion and spirituality, nations of citizenship, origin, and generation.

Masculinity, Sexuality, and Difference

Ingram, Brett D

Spring 2025

This course may be used to satisfy one of four electives required within the Communication major. This course will examine constructions of masculinity and sexuality in Western society from a critical cultural perspective. We will consider the ways in which cultural narratives about acceptable masculine behaviors and attitudes catalyze social conflicts, reinforce established power hierarchies, and organize the modes of being available to people of different gender identities and sexual orientations. We will also evaluate the liberatory potential of emergent discourses and practices that seek to cultivate greater acceptance of diversity, and promote social healing. There will be a concentrated focus on popular cultural forms (especially television, film, music, sports, and social media) that are particularly influential to contemporary men and boys.

Gender, Identity, and Sexuality

Barko, Emily B

Spring 2025

This course may be used to satisfy one of four electives required within the Communication major. This course offers an introduction to gender and sexuality studies, as a foundation to explore how the relationships between our personal biographies and the wider forces in society affect our lives and the lives of others. Employing an interdisciplinary approach to scholarship, we utilize a variety of academic and popular cultural resources to analyze how gender, sexuality, and identity are learned, embodied, and re/negotiated in everyday life. Underscoring the influence of media on social norms, we investigate how our identities are dynamically shaped by individual, interactional, and institutional sociocultural domains. With emphasis given to intersections of race, class, gender, sexuality, religion, and ethnicity, we consider how our positionalities are socially constructed, with consequential effects.

Black Popular Culture

Madenga, Florence

Spring 2025

This course may be used to satisfy one of four electives required within the Communication major. In this class, we will critically examine the development of black popular culture from blackface minstrelsy in the 1800s to present day. While we will primarily focus on black popular culture in the United States, we will also consider the work of diasporic authors and artists and the international implications of American media. Readings will draw upon theories and concepts in media studies, cultural studies, and rhetoric to center our discussion of black popular cultural texts such as television shows, films, music, poetry, and fashion.

Sports, Media, Culture

Kim, Kyoung-yim

Spring 2025

This course may be used to satisfy one of four electives required within the Communication major. Sports have long played a vital yet complex role in culture and this course examines that intersection of sports, the mass media, and society. We will appraise and debate the ways in which sports are functional or problematic in their impact on and relationship to players, fans, journalists, co-cultural groups, and nations. Students will read both scholarly and journalistic reflections, view popular and documentary film, and analyze fan experiences, mediated presentations, and critical social issues. In short, we will go beyond the box score to understand the importance and deconstruct the hype that accompanies modern sports.

Crafting Alternative Futures: Communication, Agency, and World-Making

Kizito, Kalemba

Spring 2025

This is an Enduring Question course and is open to FRESHMEN only. You must take both COMM2205 and ENGL1739. How can we harness the power of imagination to build alternative societies? These transformative paired courses invite students to explore the power of public imagination as a tool for constructing alternative societies. By working with critical, media, and communication theories alongside literature and film about speculative future worlds, students will interrogate existing systems and envision futures that challenge the status quo. Students will be encouraged to take agency in the process of creating new futures by collaborating on projects and crafting narratives and blueprints for societies that prioritize sustainability, equity, and the common good. Through the course, students will develop the tools to critically examine scholarship and literature in social, political, intellectual, and literary contexts while learning to use persuasion to mobilize communities and take an active role in shaping the future.

Growing Up Gendered: Contemporary Media Representations

Cuklanz, Lisa M

Spring 2025

This is an Enduring Question course and is open to FRESHMEN only. You must take both COMM2216 and SOCY1708. How is our gendered identity constructed? These paired courses analyze how societal norms shape gender roles by examining the impact of family, educational settings, media representations, and social interactions that further understanding of gender identity and sexual orientation. TV shows, movies, ads, and online platforms are assessed. These courses explore how gender intersects with factors such as sexuality, race, and social status, and their impact on gender identity. Issues related to gender-based violence are also examined. By engaging in group discussions, lectures, and innovative assignments that draw from fields including communication studies, sociology, and psychology, students gain a deeper understanding of how gender roles are constructed.

Studio Television Production

Howley, Richard J

Spring 2025

This course may be used to satisfy one of four electives required within the Communication major. This course is designed to introduce students to the theories, tools, and techniques of television production. The focus of this class is on developing the production skills necessary for creating effective television communication. To pursue this goal, students will combine the information from the course's texts with practical experience in the form of exercises and the creation of their own television programs. While producing and directing their programs, students, working in crews, will learn to operate studio television equipment and develop an understanding of how messages are communicated using "live" or "life-on-tape" production methods.

COMM222401

The Ideal of the Open Mind

Ingram, Brett D

Spring 2025

This course may be used to satisfy one of four electives required within the Communication major. This course investigates the breakdown of our collective capacity to determine what is true and what is false, who is to be trusted as legitimate purveyors of knowledge, and whether having an open mind is possible or desirable, given contemporary threats to liberal democracy. Conflicts and controversies concerning free speech will be of central interest, as will the rhetorical strategies employed by those involved in the debate. We will read without prejudice the views of good-willed progressive, conservative, liberal, and libertarian thinkers, and critically assess the strengths and weaknesses of each worldview. The core questions we will consider include: How should we determine the ideal balance between individual freedom and the needs, norms, and values of the broader community? What ideas and images should be tolerated, regardless of their capacity to offend, and which representations should be considered intolerable insofar as they (arguably) create conditions of clear and present danger? What are the responsibilities of media "gatekeepers," and how are we to decide who (if anyone) is qualified to serve that function?

Communicating Politics

Fennimore, Jillian

Spring 2025

This course may be used to satisfy one of four electives required within the Communication major. This course takes both a theoretical and practical approach to the art of political communication. Taught by an instructor with extensive field experience, the class surveys major historical trends in campaign advertising, policy messaging, and media relations. It then considers the modern world of political communication, offering an up-to-the-minute assessment of major trends in the field. Students have the opportunity to develop their own skills and portfolios by creating original political advertisements, social media campaigns, policy speeches, and more. The course features a number of notable guest speakers, including active politicians, candidates, and campaign managers.

COMM224001

Memory and Media

Pastel, Renee L

Spring 2025

This course may be used to satisfy one of four electives required within the Communication major. This course focuses on the relationship between memory and moving images. How can film, television, and online video capture and reproduce memory? What role can moving images play in shaping memory, both on an individual and collective level? What claims does the medium make about accurately presenting the past? Through close analysis of film, television, and digital media, we will practice making textually-grounded arguments about specific works while thinking about the broader implications for understanding media and memory. Drawing on material from a variety of time periods and genres, we will use moving images to explore how remembering (and forgetting) shapes a narrative, both on and off the screen.

COMM224301

Mobilizing for Mobile Media Storytelling World

Reynolds, Paul A

Spring 2025

This course may be used to satisfy one of four electives required within the Communication major. With the advent of the iPhone in 2007, and Android mobile devices shortly thereafter, came the smartphone media revolution. Once the domain of high cost production studios and controlled distribution through a handful of television networks, digital storytelling is now in the hands of the average citizen. Today, nearly three billion smartphones offer extraordinary access to digital media creation and post production tools, as well as instant content distribution across increasingly faster, global networks. With this kind of once unimaginable access to media creation and distribution comes an urgency to understand this tsunami of digitally crafted and often manipulated communications. In this course, we will examine the various applications and impact of this new world of networked, media-rich, mobile devices, while getting hands-on experience actually crafting digital stories with little more than smartphones for video acquisition. While the cost of smartphone production can be virtually free, to create effective short-form digital videos still requires some fundamental skills. To that end, students will learn how to plan, direct, shoot, and edit their own smartphone productions from how-to videos to short commercials, as well as advocacy spots, and political issues and candidate videos.

COMM224401

Criticism as Communication

Davidzon, Vladislav

Spring 2025

Satisfies one of three elective courses required within the Communication major.. Critics often get a bad rap these days. Pilloried for nitpicking instead of creating, denounced as "haters" and "spoilors," the critic's important, generative role in contributing to and shaping art and culture is too often overlooked. But criticism (which, of course, includes at least as much appreciation and "passionate re-description" as fault-finding) is essential to a robust artistic culture. In this class, we will read, watch, listen to, and look at works of art across many disciplines and genres (including television, film, music, visual art, and more) and engage with the work of the critics who responded to them. We'll use their examples to produce media criticism, geared for popular, non-academic audiences, of our own, across a variety of formats: writing (in different forms, for different venues), audio (radio segments and podcasting), visual, and more. The purpose of the class is to help us develop well-reasoned and articulated opinions about media, art, and literature, which, as we'll see over the course of the semester, can be, at their best, works of art in their own right. The course will also give students the skills and context to pursue careers as writers and editors at magazines, newspapers, and websites, as well as in other fields that require critical writing and thinking. More broadly, by developing these skills, students will be better equipped to understand, situate, and contribute to the shifting cultural landscape around them.

Introduction to Jewish Culture and Civilization

Sienkiewicz, Matthew S

Spring 2025

This course may be used to satisfy one of four electives required within the Communication major. This course introduces students to the study of Jewish culture and civilization and serves as the gateway course for Boston College's Jewish Studies minor. The course is divided into three core sections: core Jewish texts and beliefs, Jewish geography and languages, and Jewish cultural production. The course presumes no previous knowledge of the subject matter and welcomes students from every discipline. Objects of study will range from the Hebrew Bible and the Talmud to Ladino music, Superman comics, and Seinfeld. The course will feature guest lectures from across Boston College's Jewish Studies faculty and will include off-site learning opportunities ranging from trips to museum exhibitions to dinner at an area kosher restaurant.

Influencer Culture

Peterson, Kristin M

Spring 2025

This course may be used to satisfy one of four required electives within the Communication major. The expansion of social media platforms and algorithmic digital content has seen the emergence of the influencer, an individual who builds a following and markets various products and services through branding their own lifestyle. This course will examine the historical predecessors to contemporary influencers, such as celebrity culture, reality TV, tabloids, TV talk shows, lifestyle magazines, and blogging. Students will also analyze contemporary cases in relation to theories around influence, celebrity, authenticity, authority, and therapeutic culture. The influencer industry will be used as the lens to explore various themes in contemporary digital culture, such as the political economy of social media, marketing, algorithms, gender, racial identity, class, spirituality, wellness, mental health, misinformation, political activism, aesthetic styles, and exploitation of labor.

COMM226101

Critical Studies of Stardom and Celebrity

Hogan, Lindsay R

Spring 2025

This course may be used to satisfy one of the four electives required within the Communication major. This course critically investigates how stardom and celebrity are conceived, constructed, performed, commodified, and circulated within historical and contemporary media landscapes. It will do so by mapping the paradoxical and contingent nature of fame, public and private selves, and the politics of the 'ordinary' social sphere against the 'extraordinary' world of celebrity culture. Drawing on literature and theories from the fields of media and cultural studies, critical theory, and visual culture alongside social-scientific case studies, students will interrogate the role of celebrity in social identity formation, its connection with networks of economic and political power, and its relation to emerging media practices and platforms. This course is restricted to fourth-year students in the Communication major.

COMM226501

Theory, History and Practice of Talk Media

Citorik, Christopher

Spring 2025

This course may be used to satisfy one of four elective courses required within the Communication major. This course offers an overview of the historical, theoretical, and practical elements of American talk media from the dawn of broadcasting to today. Beginning with early US radio, the class considers the ways in which economics, politics, technology, and culture have shaped American public discourse. The course concludes by giving students an opportunity to produce their own podcast, teaching skills that will allow them to not only create professional content, but also to understand better the communication history and theory they have studied throughout the semester.

New Media and Society

Breen, Marcus J

Spring 2025

This course may be used to satisfy one of four electives required within the Communication major. This course surveys and explores new media and interactive communication technologies from a historical and critical perspective. Course content includes theories that explain contemporary social and economic formations influencing the emergence of the Internet and digital applications, including: convergence of user communities, film and television and mediated communication, post-human approaches, computer games, virtual reality, robotics, social media, militarization, business concerns and public policy debates. The course offers students the opportunity to analyze and reflect on research about the impact of media, especially the implications of digital innovations for society.

Researching Big Data and Artificial Intelligence

Jang, Seung M

Spring 2025

This course may be used to satisfy one of four electives required within the Communication major. This course is designed to develop an understanding of big data and artificial intelligence from social science perspectives. Students will critically interpret the distinctive paradigms of emerging research with digital social media data (big data) by engaging with case studies and theoretical frameworks. They will also discuss challenges and opportunities AI presents and how it shapes our understanding of human communication and society. The subtopics include human-AI interactions, social media analytics, algorithm-based discrimination, social media-related policy, misinformation, and machine learning.

COMM228301

Asian Americans in Sport and Society

Kim, Kyoung-yim

Spring 2025

This course may be used to satisfy one of four electives required within the Communication major. In the mid-twentieth century, sport was a bastion of white supremacy, and it embodied such U.S. national bodily ideals as white, heterosexual, Christian, muscular, and male. Histories of racial exclusion, racist violence, gendered policing, and sexual regulations positioned African-American men as outside the normative abilities of white men. In this respect, sport was a microcosm of the racial nation, with the language of citizenship and racial resistance coded within black-white discourse; however, this dichotomy failed to account for the long histories of Asian Americans in the United States. Asian-American sporting cultures trouble the current racial synchronicity between sport and nation while illuminating multiple performances of "belonging." This course highlights the diversity of Asian-American communities and aims to decipher how the ordinary practices of sporting cultures can offer extraordinary knowledge about U.S. society.

COMM229701

Irish Cultural Studies

Breen, Marcus J

Spring 2025

This course may be used to satisfy one of four electives required within the Communication major. Cultural Studies incorporates elements of critical anthropology, sociology, political economy and geography with other disciplines, aimed at the critical analysis of communication, culture and its meaning. This course locates the project of Cultural Studies in the island of Ireland, theorizing culture while engaging with it. Its interdisciplinary method explores contested areas of everyday life that draw attention to the politics of struggles in society by examining ideology. For example, expressions of nationalism include arguments about sovereignty, class and racial conflicts that are informed by creative activity. Irish art is considered as resistive or passive expressions of national goals of self-determination through popular culture, media, and communication generally. Irish Government support for creative industries extends the topic into cultural policy studies. The course examines the way culture was originally defined within British Cultural Studies and the changes in these ideas when applied to Ireland. From looking at the big picture of Ireland's politics as a site of struggle to the micro level of music in the local public bar, this course offers students an introduction to Ireland and to Cultural Studies.

COMM230101

Seeing Reality, Crafting Narrative

Sousa, Joseph

Spring 2025

Satisfies one of four elective courses required within the Communication major. This course will examine the intersection of documentary filmmaking and reality TV. Both "nonfiction" mediums have undergone a tumultuous evolution over the last two or three decades as a result of new technology, shifting audience expectations, and new distribution patterns. How are 'snippets of real life' transformed into compelling narratives? What defines objective and subjective filmmaking styles? How is audience trust established and broken? And what is the source of authority in visual storytelling? The course will take a hands-on approach, with students expected to film and edit their own projects. The overall goal will be to introduce students to the formal techniques of nonfiction storytelling and make them more aware and critical of what is presented as real in contemporary media.

COMM230201

International and Intercultural Feminist and Queer Theory, Rhetoric, Activism

Erol, Ali Ersen

Spring 2025

Satisfies one of four elective courses required within the Communication major. This course delves into the revolutionary strand of feminist and queer theory and activism, exploring the discourse, theory, strategy, and implementation of social change in response to diverse forms of oppression and injustice. Beginning with a broad discussion on the meaning of social change, revolution, and resistance within specific historical contexts, we delve into feminist and queer theorizing and activism, with a strong emphasis on Indigenous, international, and intercultural feminisms and the bonds of queer solidarity. We will critically examine statements, manifestos, zines, and other communicative tools, providing insight into the multitude of voices and concerns within this rhetorical tradition. Through the exploration of specific historical periods and movements, we will uncover how thinkers and activists have envisioned and pursued feminist and queer worldbuilding. We will study people such as Rosa Luxemburg, Clara Zetkin, Kitty Marion, Silvia Federici, David Kato, bell hooks, Wilma Mankiller, Berta Caceres, and Marsha Johnson, and learn about cases such as the 1871 Paris Commune, 1955 Cairo Womens conference, 1969 Stonewall Riots well as Feminist & LGBT concerns within broader liberation movements such as Zapatistas, and Arab Spring.

COMM333501

Communication Methods: Honors

Cuklanz, Lisa M

Spring 2025

Open to students in departmental honors This course is an honors introduction to research methods used in communication research. Students will learn how to ethically conduct research; develop a working knowledge of the IRB and associated requirements; learn the process of creating a compelling research question/hypothesis; acquire the skills necessary to gather and analyze data; and write initial scholarship regarding their potential thesis project. Overall, this course will create a strong foundation for students who will conduct their own research. Students will demonstrate their understanding of the material as well as their ability to apply the material through exams, a research project, an oral presentation, and daily participation.

COMM336001

Communication Methods: Mixed Methodology

Erol, Ali Ersen

Spring 2025

One of COMM3330, COMM3340, or COMM3360 is required for the Communication Major. This course is an interdisciplinary exploration of both qualitative and quantitative methodologies essential for understanding human communication. The course begins by examining the meaning and process of communication research across different traditions, providing students with a foundational understanding of research paradigms. Through a step-by-step approach, students will learn research design, data collection, analysis and interpretation, and research conclusion techniques. Emphasizing a comprehensive understanding of research processes, the course bridges the gap between theoretical frameworks and practical applications. In addition to lectures, students will engage in workshops to practice analysis methods learned in class, fostering hands-on experience and skill development. We will analyze various articles across disciplines and methodologies to examine the best (and the worst) practices in conducting and presenting research. This course is vital for succeeding in writing-intensive courses.

COMM444301

Seeing God and Hearing Ghosts: Spirituality in US Media

Peterson, Kristin M

Spring 2025

Satisfies one of two writing intensive courses required within the Communication major. Restricted to Juniors and Seniors.. This writing intensive course will explore the intimate connections between the development of media technologies and the emergence of religious movements in the U.S. Emphasizing the unique relationship of religion and media in American public life, this course will focus on how the disestablishment of religion creates a competitive marketplace in which religions engage with new media technologies to make meaning, maintain community connections, and reach new members. Students will examine how the development of new media technologies presents both opportunities and challenges to various religious groups in the U.S. Cases to be discussed in the class include: how access to mass printing technologies enables publications and sacred texts from emerging religious groups like the Church of Jesus Christ of Latter-Day Saints, the Nation of Islam, and the Jehovah's Witnesses; how radio waves and photography influenced the popularity of spiritualism after the Civil War; how cable networks provided the opportunity for Evangelical Christians to ascend to the center of American public life; or how social media create space for young Muslim Americans to express their faith in contrast to mainstream media stereotypes.

Health/Illness in Relationships

Duggan, Ashley P

Spring 2025

Satisfies one of two required writing intensive courses required within the Communication major. Restricted to Juniors and Seniors.. This class integrates communication theories and applications in the contexts of healthcare conversations and decisions, and with organizational and social systems. We consider conversations with health providers, family members, and close friends navigating illness. We address the complexities of communication within broader healthcare structures and the distribution of resources to promote health and address illness. We address disparities in access and communication about quality healthcare such that advances in science, technology, and medicine are unequally distributed. This course considers disparities in substantive ways that require us to consider how relationships are tied to resources, to values, and to larger economic motives. We address communication processes as we unpack each of the complexities in health and illness in relationships.

Representing Reality

Pastel, Renee L

Spring 2025

Satisfies one of two writing intensive courses required within the Communication major. This course examines the possibilities of representing and recreating reality in visual media. To what extent is what we perceive as authentic, in fact, constructed, mediated, and performed? What is the relevance of the notion of truth in this context? We will consider films, television shows, and other forms of media that blur the boundaries of reality and allow a rethinking of received definitions and established forms of perception. As a class, we will reconsider realism in visual media, treated both thematically within a narrative and as a foundational question of media more broadly.

Spring 2025

This course may not be repeated. This course may be used to satisfy one of four elective courses required within the Communication major. This course gives Communication majors with junior or senior standing an opportunity to pursue a 15-20 hour per week internship in a specific field of Communication. Practical experience will be supplemented by discussions of relevant theoretical constructs. Periodic discussion group seminars will enhance a student's immersion in the industry. Adherence to professional protocol is expected. A field research paper is required as well as supervisor evaluations. This course counts as a 3-credit Communication elective. Instructor permission is required for enrollment. This course may also count for LSEHD students' required practicum; permission from Dean DeVoy is required for LSEHD students.

Credits: 3

Room and Schedule: By Arrangement

Satisfies Core Requirement: None

Prerequisites: Senior standing, six completed BC communication courses (including core requirements), and permission of the instructor. or Permission of Instructor

Computer Science Courses: Summer 2024

CSCI110101

Computer Science I

Marques Samary, Maira R

Summer 2024

Satisfies Core requirement for Mathematics for CSCI1101 and CSCI1103. This course is an introduction to the art and science of computer programming and to some of the fundamental concepts of computer science. Students will write programs in the Python programming language. Good program design methodology will be stressed throughout. There will also be a study of some of the basic notions of computer science, including computer systems organization, files and some algorithms of fundamental importance.

CSCI110201

Computer Science II

Marques Samary, Maira R

Summer 2024

In this course, the student will write programs that employ more sophisticated and efficient means of representing and manipulating information. Part of the course is devoted to a continued study of programming. The principal emphasis, however, is on the study of the fundamental data structures of computer science (lists, stacks, queues, trees, etc.). Both their abstract properties and their implementations in computer programs and the study of the fundamental algorithms for manipulating these structures. Students will use Java for programming.

Data, Ethics and Society

Hurley, Deborah

Summer 2024

If you tried to live for one day without generating any data, how would you spend it? The use of data has proliferated and is pervasive. This timely, topical course examines key ethical questions of the Information Age. These issues pervade numerous, diverse aspects of the economy and society, from human rights to international trade. Students will learn about these topics, beginning first with acquaintance with the dominant ethical frameworks of the 20th and 21st centuries. They will then employ these frameworks to understand, analyze, and develop solutions for leading problems in the Information Age and their technological, social, economic, policy, and legal implications. Subjects include artificial intelligence (AI), big data, privacy, bias, accountability, mis/disinformation, human rights, hate speech, liberty, autonomy, international and global concerns, and emerging issues. You will come away with useful tools to understand and craft answers to some of the most pressing problems of our time. Prerequisites: None. You are already profoundly affected by the issues raised in this course and have knowledge and experience with them. This course will bring that background up to the surface, illuminate it and bring rigor to thinking about it, add to it significantly, and provide accessible toolkits for analyzing these problems and developing solutions.

Computer Organization and Lab

Biswas, Anjum

Summer 2024

This course studies the internal organization of computers and the processing of machine instructions. Topics include computer representation of numbers, combinational circuit design (decoders, multiplexers), sequential circuit design and analysis, memory design (registers and main memory), and simple processors including datapaths, instruction formats, and control units. In the laboratory-based portion of course students design and build digital circuits related to lecture. Exercises include hardware description languages, combinational and sequential circuits, arithmetic and logic units, and simple datapath and control units.

Computer Science Courses: Fall 2024

CSCI108001

Principles of Computer Science

Marques Samary, Maira R

Fall 2024

This is an introductory course for students with little or no programming experience. It is intended principally for students who will not be CS majors or minors, but it will help prepare students for future computer science courses if they wish to continue, and will enable them to use programming to solve problems in their field of study. The course presents an overview of the history, great principles, and transformative applications of computer science, as well as a comprehensive introduction to programming. Students will start with visual coding and later be introduced to Python. The course is based on the 'learning by doing' approach where active participation and pair programming are pillar of the course.

CSCI109001

Data Science Principles

Prud'hommeaux, Emily T

Fall 2024

This course will provide students with an overview of the field of data science and its responsible uses, along with an introduction to programming in Python from a data science perspective. An emphasis will be placed on solving problems and applying data science principles to real-world datasets. For example, students will learn sorting algorithms that would be taught in a traditional introduction to programming class, but then will apply the algorithms to a data science problem (for example assessing the fairness of a loan scoring algorithm with respect to protected classes of individuals). Python programming topics will include data structures, functions, recursion, algorithms, exploratory data analysis, data processing and visualization. Students will engage through readings and in class discussions on topics such as applications of data science for the common good, privacy in a digitally connected world, issues of representation and omission in data collection, biases inherent in constructing information infrastructures and classification schemes, and the impacts of algorithmic decision-making.

Introduction to Scientific Computation

Levear, Duncan A

Fall 2024

This is an introductory course in computer programming for students interested in numerical and scientific computation. Emphasis will be placed on problems drawn from the sciences. Many mathematical models of the behavior of complex natural systems have no closed-form solution, and computational modeling is needed for data exploration and to obtain approximate solutions. The course discusses different models and approximation methods, how to implement them as computer programs, and the factors that influence approximation quality. Topics include computer representation of floating-point numbers and data, computer program design and control flow, data visualization, nonlinear equations, systems of linear equations and least-squares, and Fourier analysis, with additional topics as time allows. Students will write programs in the Python programming language, primarily.

Credits: 3

CSCI224401

Randomness and Computation

Mohler, George

Fall 2024

This course presents the mathematical and computational tools needed to solve problems that involve randomness. For example, an understanding of random variables allows us to efficiently generate the enormous prime numbers needed for information security, and to quantify the expected performance of a machine learning algorithm beyond a small data sample. An understanding of covariance allows high quality compression of audio and video. Topics include combinatorics and counting, random experiments and probability, random variables and distributions, computational modeling of randomness, Bayes' rule, laws of large numbers, vectors and matrices, covariance and principal axes, and Markov chains.

Credits: 3

CSCI225401

Web Application Development

Yun, Mira

Fall 2024

The web connects our society, providing enormous opportunities for changing and improving how we live every day, from sharing information to interacting with others. We have witnessed the power of the web through various web-based applications, including social media, productivity, and transportation applications. These digital utilities have seamlessly integrated into our routines, fundamentally altering our methods of communication, work, and mobility in recent times. Students will learn how to develop usable and useful web applications in this course. The overall architecture of Internet applications is examined at a high level. Special emphasis is placed on front-end development, including HTML, CSS, and JavaScript. This course further expands to encompass React, a component-based library for building frontend interfaces. The course will culminate with a final project where students take a human-centered design approach to address the needs of people by constructing a sophisticated web application.

CSCI226101

Media Ethics in the Digital Age

Breen, Marcus J

Fall 2024

This course may be used to satisfy one of four electives required within the Communication major. This course gives students an understanding of the ethical dimensions of communication in an accelerating digital world. Drawing on philosophical principles that resonate with Jesuit values, students will learn to identify, evaluate, and where possible interpret moral conflicts in the media and communication environment, in the media industry, and between the industry and the public. Rather than look at ethical conflicts strictly from a Western lens, the course introduces the students to a variety of philosophical and cultural models. Using a case study approach, the course addresses various contemporary ethical concerns, such as social media and mental health, misinformation, hate speech, extremist content, documentaries, alternative business models for journalism, international and cross-cultural issues, commodity activism, guerilla marketing, entertainment, privacy, doxing, and copyright.

CSCI226701

Technology and Culture

Griffith, William

Fall 2024

This interdisciplinary course will first investigate the social, political, psychological, ethical, and spiritual aspects of the Western cultural development with a special emphasis on scientific and technological metaphors and narratives. We will then focus on the contemporary world, examining the impact of our various technological creations on cultural directions, democratic process, the world of work, quality of life, and especially on the emergent meanings for the terms "citizen" and "ethics" in contemporary society. Students will explore technologies in four broad and interrelated domains: (1) computer, media, communications, and information technologies, (2) biotechnology, (3) globalization, and (4) environmental issues.

CSCI226801**Data, Ethics and Society****Hurley, Deborah****Fall 2024**

If you tried to live for one day without generating any data, how would you spend it? The use of data has proliferated and is pervasive. This timely, topical course examines key ethical questions of the Information Age. These issues pervade numerous, diverse aspects of the economy and society, from human rights to international trade. Students will learn about these topics, beginning first with acquaintance with the dominant ethical frameworks of the 20th and 21st centuries. They will then employ these frameworks to understand, analyze, and develop solutions for leading problems in the Information Age and their technological, social, economic, policy, and legal implications. Subjects include artificial intelligence (AI), big data, privacy, bias, accountability, mis/disinformation, human rights, hate speech, liberty, autonomy, international and global concerns, and emerging issues. You will come away with useful tools to understand and craft answers to some of the most pressing problems of our time. Prerequisites: None. You are already profoundly affected by the issues raised in this course and have knowledge and experience with them. This course will bring that background up to the surface, illuminate it and bring rigor to thinking about it, add to it significantly, and provide accessible toolkits for analyzing these problems and developing solutions.

CSCI227101

Computer Systems

Aviram, Amittai F

Fall 2024

This course is about how computing machines implement the human-friendly abstractions we express in our programs. It reveals the internal representations of data and instructions, as well as the management of data storage in memory, the coordination of processes, and the interactions between operating systems and the programs being executed. Computer Systems explores system behavior and operations in considerable detail. This greater detail is essential for optimizing program performance, for working within the finite memory and word size constraints of computers, for effective debugging, and for systems-level programming. This hands-on course introduces you to the C programming language and techniques of systems programming through extensive coding exercises

Software Engineering

Marques Samary, Maira R

Fall 2024

This course covers the basic life cycle of software development: requirements, design, implementation, testing, and production release. Students will learn the theory related to software engineering, but they will also learn hands-on how to create their own software. The main evaluation of the course is a team project that will simulate a small real project. The project will be done using the framework Django (Python), the CSS Framework Bootstrap, among other technologies. The project will be worth 50% of the grade, as well as 2 midterms, an exam, and a peer assessment (how your team members evaluate the work you did).

CSCI335801

Foundations of algorithmic (un)fairness

Finocchiaro, Jessica

Fall 2024

Computation is increasingly used to support decision-making in our society: banks are given to algorithmic predictions to help them determine loan qualification; in the COVID-19 pandemic, algorithms were used to allocate scarce vaccines; facial recognition algorithms allow us to use our faces as "keys" to unlock our phones and even houses. In these high-stakes settings, concerns of fairness and justice are salient. This course will equip students with the mathematical tools to understand and address some of these concerns. Topics will include: how to computationally define and diagnose (un)fairness, the role of uncertainty in fairness, disparate treatment vs disparate impact, and contextualization within US anti-discrimination law.

Human-AI Interaction

Kim, Nam Wook

Fall 2024

The recent surge in large-language model development has reached a tipping point, making AI increasingly useful in everyday life for a wide audience. This course will introduce fundamental concepts, ideas, and principles underlying human-AI interaction design. We will cover topics from human-computer interaction and machine learning literature, including cognitive load theory, mixed-initiative models, and key issues like fairness and inclusivity, explainability, and safety. Students will learn these topics via practical applications such as image/video recognition, prompt engineering, and programming assistants. They will carry out hands-on assignments and projects, ranging from producing AI-assisted media content and evaluating large-language models to building AI-driven interactive applications.

Credits: 3

Computer Networks

Wiseman, Charles

Fall 2024

This course studies computer networks and the services built on top of them. Topics include packet-switch and multi-access networks, routing and flow control, congestion control and quality-of-service, resource sharing, Internet protocols (IP, TCP, BGP), the client-server model and RPC, elements of distributed systems (naming, security, caching, consistency) and the design of network services (peer-to-peer networks, file and web servers, content distribution networks). Coursework involves a significant amount of Java/C programming.

Principles of Programming Languages

Stump, Aaron

Fall 2024

This course studies issues in programming language design and implementation. Language features like statically scoped variables, higher-order functions, static type-checking, recursion and pattern-matching are considered, from the points of view of both language users and language implementors. The class also introduces the functional programming paradigm, using a language like Haskell or OCaml. Other topics considered include garbage collection, tail recursion, and basics of parsing. Finally, the class introduces computer theorem-proving, using an advanced language like Agda, for reasoning about functional programs. The graded work of the class consists of regular short programming assignments as well as a more substantial project

Deep Learning

Yuan, Yuan

Fall 2024

Deep Learning is rapidly emerging as one of the most successful and widely applicable sets of techniques across a range of domains, including vision, language, speech, robotics, medicine, and AI in general. This has led to significant success and exciting new directions that may previously have seemed out of reach. This course offers an introduction to the fundamentals of deep learning, covering both theory and applications. It starts from the basics of Neural Networks (NNs) and extends to some of the latest research. Topics covered include neural net architectures (MLPs, CNNs, RNNs, transformers, large language models, generative models), geometry and invariances in deep learning, backpropagation and automatic differentiation, learning theory and generalization, self-supervised learning and robust learning, as well as applications to computer vision, natural language processing, medicine, and science, among others. The course will be delivered through instructor lectures and reinforced with coding assignments that teach both theoretical and practical aspects. Additionally, it will include a project that allows students to explore an area of deep learning that interests them in more depth.

Computer Science Courses: Spring 2025

CSCI109001**Data Science Principles****Maier, Cristina**

Spring 2025

This course will provide students with an overview of the field of data science and its responsible uses, along with an introduction to programming in Python from a data science perspective. An emphasis will be placed on solving problems and applying data science principles to real-world datasets. For example, students will learn sorting algorithms that would be taught in a traditional introduction to programming class, but then will apply the algorithms to a data science problem (for example assessing the fairness of a loan scoring algorithm with respect to protected classes of individuals). Python programming topics will include data structures, functions, recursion, algorithms, exploratory data analysis, data processing and visualization. Students will engage through readings and in class discussions on topics such as applications of data science for the common good, privacy in a digitally connected world, issues of representation and omission in data collection, biases inherent in constructing information infrastructures and classification schemes, and the impacts of algorithmic decision-making.

Randomness and Computation

Finocchiaro, Jessica

Spring 2025

This course presents the mathematical and computational tools needed to solve problems that involve randomness. For example, an understanding of random variables allows us to efficiently generate the enormous prime numbers needed for information security, and to quantify the expected performance of a machine learning algorithm beyond a small data sample. An understanding of covariance allows high quality compression of audio and video. Topics include combinatorics and counting, random experiments and probability, random variables and distributions, computational modeling of randomness, Bayes' rule, laws of large numbers, vectors and matrices, covariance and principal axes, and Markov chains.

Web Application Development

Yun, Mira

Spring 2025

The web connects our society, providing enormous opportunities for changing and improving how we live every day, from sharing information to interacting with others. We have witnessed the power of the web through various web-based applications, including social media, productivity, and transportation applications. These digital utilities have seamlessly integrated into our routines, fundamentally altering our methods of communication, work, and mobility in recent times. Students will learn how to develop usable and useful web applications in this course. The overall architecture of Internet applications is examined at a high level. Special emphasis is placed on front-end development, including HTML, CSS, and JavaScript. This course further expands to encompass React, a component-based library for building frontend interfaces. The course will culminate with a final project where students take a human-centered design approach to address the needs of people by constructing a sophisticated web application.

Tech Tools for Playful Learning

Bers, Marina

Spring 2025

This course explores the design and use of new technologies for learning and engages students in current debates around educational technologies, computational thinking, coding and robotics. Students will learn how to develop, implement, and evaluate technology-rich curriculum and will design their own computational meaningful projects. They will visit K-2 classrooms to implement technology-rich curricula, will learn how to use video to document their experiences and will become researchers to assess the thinking and learning fostered by the different tools.

Technology and Culture

Griffith, William

Spring 2025

This interdisciplinary course will first investigate the social, political, psychological, ethical, and spiritual aspects of the Western cultural development with a special emphasis on scientific and technological metaphors and narratives. We will then focus on the contemporary world, examining the impact of our various technological creations on cultural directions, democratic process, the world of work, quality of life, and especially on the emergent meanings for the terms "citizen" and "ethics" in contemporary society. Students will explore technologies in four broad and interrelated domains: (1) computer, media, communications, and information technologies, (2) biotechnology, (3) globalization, and (4) environmental issues.

Data, Ethics and Society

Hurley, Deborah

Spring 2025

If you tried to live for one day without generating any data, how would you spend it? The use of data has proliferated and is pervasive. This timely, topical course examines key ethical questions of the Information Age. These issues pervade numerous, diverse aspects of the economy and society, from human rights to international trade. Students will learn about these topics, beginning first with acquaintance with the dominant ethical frameworks of the 20th and 21st centuries. They will then employ these frameworks to understand, analyze, and develop solutions for leading problems in the Information Age and their technological, social, economic, policy, and legal implications. Subjects include artificial intelligence (AI), big data, privacy, bias, accountability, mis/disinformation, human rights, hate speech, liberty, autonomy, international and global concerns, and emerging issues. You will come away with useful tools to understand and craft answers to some of the most pressing problems of our time. Prerequisites: None. You are already profoundly affected by the issues raised in this course and have knowledge and experience with them. This course will bring that background up to the surface, illuminate it and bring rigor to thinking about it, add to it significantly, and provide accessible toolkits for analyzing these problems and developing solutions.

Computer Systems

Aviram, Amittai F

Spring 2025

This course is about how computing machines implement the human-friendly abstractions we express in our programs. It reveals the internal representations of data and instructions, as well as the management of data storage in memory, the coordination of processes, and the interactions between operating systems and the programs being executed. Computer Systems explores system behavior and operations in considerable detail. This greater detail is essential for optimizing program performance, for working within the finite memory and word size constraints of computers, for effective debugging, and for systems-level programming. This hands-on course introduces you to the C programming language and techniques of systems programming through extensive coding exercises

Machine Learning

Yuan, Yuan

Spring 2025

This course provides an introduction to computational mechanisms that improve their performance based on experience. Machine learning can be used in engineered systems for a wide variety of tasks in personalized information filtering, health care, security, games, computer vision, and human-computer interaction, and can provide computational models of information processing in biological and other complex systems. Supervised and unsupervised learning will be discussed, including sample applications, as well as specific learning paradigms such as decision trees, instance-based learning, neural networks and deep learning, Bayesian approaches, meta-learning, and clustering. General concepts to be described include feature space representations, inductive bias, overfitting, and fundamental tradeoffs.

Natural Language Processing

Prud'hommeaux, Emily T

Spring 2025

In this hands-on course, we study natural language processing (NLP), the subfield of artificial intelligence focused on analyzing, producing, and understanding human language. Using models and algorithms from formal language theory, statistics, and machine learning, we will explore methods for gaining insight into the structure and meaning of text. We will apply these methods to tasks such as information extraction, sentiment analysis, and machine translation. Students will work in teams to collect data and to implement their own NLP applications.

Databases

Aviram, Amittai F

Spring 2025

From EagleApps to e-commerce to the Motor Vehicle Registry and the IRS, databases are everywhere, essential to modern computing, but typically lie hidden in the background. This course brings databases into the foreground. It first introduces you to direct interactions with relational databases, casting you as power user. We then shift to the database engineers point of view: designing a convenient and efficient database to represent a body of real-world data. Finally, we look under the hood to get a sense of how database engines are built. Each of the three areas will have a set of programming assignments, including a simple Web interface for queries, a database schema and its realization, and a simple database engine of your own. You are not assumed to know SQL coming in, but you will need to know both Python and C, and some familiarity with HTML is helpful.

Software Engineering

Marques Samary, Maira R

Spring 2025

This course covers the basic life cycle of software development: requirements, design, implementation, testing, and production release. Students will learn the theory related to software engineering, but they will also learn hands-on how to create their own software. The main evaluation of the course is a team project that will simulate a small real project. The project will be done using the framework Django (Python), the CSS Framework Bootstrap, among other technologies. The project will be worth 50% of the grade, as well as 2 midterms, an exam, and a peer assessment (how your team members evaluate the work you did).

CSCI336201

Operating Systems

Wiseman, Charles

Spring 2025

This course covers the fundamentals of operating systems (OS) design both from a theoretical and a practical perspective. The course is organized in two parts, each involving a separate course project. The first part deals with the system call interface between applications and the OS, the multi-process abstraction of a computing system, and task scheduling algorithms. The associated project involves the implementation of a custom Unix command-line interpreter (shell). The second part of the course covers memory management, multi-threading libraries, and file systems. A real implementation of these features is studied on a miniature, open-source operating system called xv6. The associated project involves an extension of xv6 to support custom features, such as new scheduling policies, kernel-level threads, or file system recovery.

Economics and Computation

Marmolejo Cossio, Francisco Javier

Spring 2025

This course examines the intersection of economic and computational thinking, emphasizing core concepts, modeling, and mathematical analysis while highlighting connections to the digital economy and online systems. Covered topics include game theory, auction design, incentive alignment, information elicitation, matching, reputation systems, cryptoeconomics, and privacy and ethics. Practical applications span advertising, pricing, crowdsourcing, social networks, market platforms, DeFi, prediction markets, and more. Students will engage in both theoretical and computational exercises and complete a final project.

Cryptography

Volkovich, Ilya

Spring 2025

Can Alice ensure that the message she sends to Bob can be read only by Bob, even if the message is intercepted by an eavesdropper? Can Bob ensure that the message he receives really came from Alice? How can a server verify a client's password without storing sensitive password information? This course studies the theoretical foundations of algorithms for private and public key cryptography, digital signatures, cryptographic hash-codes, and authentication schemes. We will also consider see a few world protocols and practices (e.g., SSL and public key certificates)

Credits: 3

Algorithms

Creiner, Alexander

Spring 2025

This course is a study of algorithms for, among other things, sorting, searching, pattern matching, and manipulation of graphs and trees. Emphasis is placed on the mathematical analysis of the time and memory requirements of such algorithms and on general techniques for improving their performance.

Credits: 3

Room and Schedule: 245 Beacon Street Room 102 TuTh 12:00 Noon-01:15PM

Computability and Computational Complexity

Creiner, Alexander

Spring 2025

This is a course in the theoretical foundations of computer science, centered around the theme of fundamental limits on computation. Topics include: Turing Machines, universal computation, undecidability of the halting problem, solvable and unsolvable algorithmic problems, recursive functions, Goedel's Incompleteness Theorem, time- and space-bounded computations, Cook's Theorem, NP-complete problems, problems solvable in polynomial space, randomized computation, application to cryptography, practical approaches to computationally intractable problems (such as SAT solvers), quantum computing, and Shor's Theorem.

Topics in Computational intelligence: Machine Learning Projects

Bento Ayres Pereira, Jose

Spring 2025

In this project based class, we will introduce several machine learning concepts, and illustrate and practice their use. These topics will, tentatively, include: classification, data processing, dimensionality reduction, model evaluation and tuning, ensemble learning, regression, clustering, multi layer artificial neural networks and their use for classification, regression, generative adversarial networks, and reinforcement learning.

Formal Methods

McTague, Carl S

Spring 2025

Complex programs often have bugs, sometimes with serious consequences. Although testing can help root them out, it is impossible to test all possible behaviors of complex programs. To complement testing, one can construct mathematical proofs that programs are correct. This technique, called formal verification, can be done using a tool for writing and automatically checking such proofs. This course introduces formal verification with one such proof checking system called Coq. Students will write precise specifications of how programs should behave, and then carry out proofs in Coq showing that those specifications are met.

Readings in Programming Languages

Stump, Aaron

Spring 2025

This course meets once a week to read materials like tutorials, book chapters, or research articles in the area of Programming Languages. The course will be divided into 3-week units, with each unit devoted to studying one such work on a topic in Programming Languages. Example topics include things like compilation of functional languages, concurrent functional programming, garbage collection algorithms, higher-order flow analysis, abstract machines, just-in-time compilation, verified compilation, and more. Student input will help determine which topics will be studied. Work for the class includes answering a question or two in advance of the weekly meeting, to ensure that students have read the material and are prepared to discuss it. Students will also choose one of the units covered and write a brief report about it, for a final project.

Cornerstone Courses: Fall 2024

UNCS220102

Courage to Know

Bracher, Elizabeth R

Fall 2024

This will be an interactive three-credit seminar of fifteen students, serving as one of students' university electives and one of the five courses in the first semester. Your instructor will serve as your academic advisor during the first year. This course offers an introduction to college life. The readings and discussions will investigate personal and social development in the college years. Topics will include the nature of learning, diversity, social justice, human sexuality, intimacy, addiction, and other topics. The class materials and strategies are designed to be provocative and practical as well as intellectually stimulating.

Cornerstone Courses: Spring 2025

UNCS220101

Courage to Know

Hincks, Martha M

Spring 2025

This will be an interactive three-credit seminar of fifteen students, serving as one of students' university electives and one of the five courses in the first semester. Your instructor will serve as your academic advisor during the first year. This course offers an introduction to college life. The readings and discussions will investigate personal and social development in the college years. Topics will include the nature of learning, diversity, social justice, human sexuality, intimacy, addiction, and other topics. The class materials and strategies are designed to be provocative and practical as well as intellectually stimulating.

Earth and Environmental Sciences Courses: Summer 2024

EESC114001

Our Mobile Earth

O'Brien, Suzanne R

Summer 2024

This course will provide you with an introduction to the structure of Earth and the dynamic processes that continuously shape and remodel its surface. During class, we will discuss the formation and evolution of the oceans and continents within the framework of the modern theory of plate tectonics. The locations, causes and effects of earthquakes and volcanoes are presented. The dynamics within Earth which drive the tectonic plates are outlined.

Summer 2024

This course will provide you with an introduction to the structure of Earth and the dynamic processes that continuously shape and remodel its surface. During class, we will discuss the formation and evolution of the oceans and continents within the framework of the modern theory of plate tectonics. The locations, causes and effects of earthquakes and volcanoes are presented. The dynamics within Earth which drive the tectonic plates are outlined.

EESC116301

Environmental Issues and Resources

Galli, Kenneth G

Summer 2024

Hybrid Core Course includes three themes: (1) Intro to Environmental Geology, (2) How to write well and how to write field trip reports, (3) How to use Google Earth to understand Earth Materials and Processes. Learn about the major processes at work inside and on the surface of the earth. Learn to be a careful observer and to write succinct field trip reports, through two field trips and the writing of a field trip report. Each class is designed to examine the facts, historical background, and through in-class exercises, homework and field trips, provide experience in analyzing and solving real world problems associated with environmental issues, resources and sustainability. Demonstrations, videos, readings and several field trips underscore important concepts and applications and the importance of careful observation. Online Google Earth exercises, done remotely, will introduce the power of this geographic application to understand geology.

Earth and Environmental Sciences Courses: Fall 2024

EESC113201

Exploring the Earth

Lamontagne, Anne

Fall 2024

The Earth is a dynamic planet that our species is clearly changing. A great challenge of the twenty-first century is to maintain the Earth's ability to support its growing human population. This course discusses the origin and materials of the Earth and the processes by which it has evolved. It is a first course for Geological Sciences majors and also provides a background for departmental majors and minors. EESC1132 is appropriate as a natural science core course for students interested in the Earth Sciences. The laboratory consists of in-class exercises, analysis of rocks, and a weekend field trip.

Astronomy

Kuchar, Thomas A

Fall 2024

Astronomical observations and theories date back to the beginning of recorded history. The development of astronomy is closely tied to the growth of physics, mathematics, philosophy, and theology. Emphasis is on large-scale concepts and on how we know what we know about the stars, our galaxy, and the universe. The course covers these discoveries and ideas from the earliest days of astronomy to many of the recent, exciting advances.

Rivers and the Environment

Snyder, Noah P, PHD

Fall 2024

Scientific understanding of rivers is vital to address many of today's environmental challenges. Rivers transport and distribute water, sediment, nutrients, and contaminants throughout the landscape. They provide habitat and migration pathways for countless aquatic species. Rivers supply fresh water, power generation, and recreational opportunities to much of the world's human populations. We will learn about the geological, hydrological, and biological processes that are important to rivers and watersheds, and how knowledge of these processes aids our ability to manage, protect, and restore these systems.

EESC118001**The Living Earth I****Lamontagne, Anne****Fall 2024**

This core course provides a broad and modern presentation of the major topics and principles of Earth Science. The lectures will cover all the fundamental subjects of geology, with emphasis on earth materials such as minerals, rocks and internal and external Earth processes, with a brief overview of important aspects of Earth history. The labs will involve hands-on work studying minerals, igneous rocks, sedimentary rocks, metamorphic rocks, viscosity, weathering and running water, formation of ripples and sand dunes, plate tectonics, fossils, and earthquakes, in addition to a local field geology trip during lab time. Additional topics may be covered if time allows.

Climate Change and the Corporation: Risks, Rewards, and Responsibilities

Pisani Gareau, Tara

Fall 2024

This is a Complex Problem course and is open to FRESHMEN only. You must take UNAS1733 with this course. Climate change is a complex, existential threat to humanity, manifesting in heat waves, droughts, wildfires, and flooding. Corporate America is a contributor to climate change through greenhouse gas emissions. In addition, corporations are impacted by climate change as it threatens their physical assets and their ability to supply goods and services. Through an integrated approach that blends scientific analysis of climate change with case studies of corporations, students will learn the science behind climate risk and study how businesses are managing and communicating to stakeholders both the impacts of climate change on the firm as well as the firm's impact on the environment.

Environmental Systems: The Human Footprint

Kafka, Alan L

Fall 2024

Humans have become an increasingly significant force on Earth system, including the atmosphere, biosphere, and hydrosphere. This course explores the influence of humans on natural systems and how environmental solutions and consequences link to social, political, economic, health, and justice issues. Specifically, we will discuss topics related to population growth, energy, agriculture, urbanization, and environmental justice. This course is part of the Environmental Systems introductory sequence (EESC2201-EESC2208) for Environmental Geoscience majors.

Environmental Systems: Oceans

Wilson, Kathleen

Fall 2024

The oceans cover 70% of the earth's surface and are home to much of its life. The oceans are critical to the earth's biogeochemical cycling of energy and mass. Ocean currents play a key role in climate through redistribution and exchange of heat with the atmosphere and storage of CO₂. Coastal areas, the narrow interface between land and ocean, represent some of the most productive, populated, and vulnerable regions on earth. The course provides an introduction to the ocean's role in earth processes and explores topics and challenges facing a changing planet through case studies and critical and analytical thinking.

The oceans cover 70% of the earth's surface and are home to much of its life. The oceans are critical to the earth's biogeochemical cycling of energy and mass. Ocean currents play a key role in climate through redistribution and exchange of heat with the atmosphere and storage of CO₂. Coastal areas, the narrow interface between land and ocean, represent some of the most productive, populated, and vulnerable regions on earth. The course provides an introduction to the ocean's role in earth processes and explores topics and challenges facing a changing planet through case studies and critical and analytical thinking.

EESC220801**Environmental Systems: Quantitative Methods****Lamontagne, Anne****Fall 2024**

This course focuses on some mathematical topics that are commonly used in analyses of environmental systems. The primary emphasis in the course will be on statistical methods, especially understanding statistical sampling and the determination of the mean, standard deviation, and confidence intervals of a population. Some commonly used probability distributions including the normal and Poisson distributions will be discussed. Other topics such as line fitting, non-linear models, and feedback systems will be introduced. The course is part of the Environmental Systems introductory sequence (EESC2201-EESC2208) for Environmental Geoscience majors.

EESC302001

Integrating Science and Society: A Tale of Four Nobels

Huang, Jier;Ming, Yi;Tian, Hanqin

Fall 2024

To borrow a line from A Tale of Two Cities, It was the best of times, it was the worst of times. Hardly a day goes by without headlines about climate change, environmental degradation, socioeconomic inequality and policy failure. Yet the aspirations for a just, sustainable society and the rapid development of new technologies in renewable energy and AI offer hopes and business opportunities. One thing for sure is that what we choose to do (or not to do) at this particular juncture of history is bound to have long-lasting implications for many generations to come. This interdisciplinary course, to be co-taught by the core faculty members of the Schiller Institute, will focus on the intersection of climate science, sustainable growth, green technology and policy actions. It is designed specifically to provide students with a comprehensive, yet in-depth overview of the complex interrelationships between these four key areas and how they may interact to shape the future of our planet. The course is inspired partly by four recent Nobel Prizes (hence the title), which are in physics (2021), peace (2007), chemistry (2023) and economics (2018), and help anchor the main units. The first unit starts with an overview of the scientific evidence for climate change and its causes, as well as the current state of energy production, consumption and technology. In the second unit, students will then learn about the challenges and opportunities associated with transitioning to a more sustainable economy, nature-based solution to climate change. The third unit is devoted to state-of-art technology toward renewable energy. The fourth unit, composed mainly of a series of guest lectures, provides a review of the existing policy frameworks at local, national, and international levels, as well as the role of key actors such as governments, NGOs, industries and communities of faith.

Terrestrial Biosphere models(TBM) can provide a quantitative tool for a predictive understanding of the structure and functioning of Earth's terrestrial biosphere and its interactions with atmosphere and ocean. A rapidly increasing literature indicates that TBM has become a theme in the study of many cutting-edge research issues such as climate change impact, adaptation and mitigation, and natural resource management. Terrestrial Biosphere Modeling is a project-based course that explores the theory and rationale in modeling the structure and functions of the terrestrial biosphere, examines the state-of-art in modeling technologies such as data assimilation, Machine Learning/AI Algorithms, and scaling up from site to global level. The primary teaching objective is to provide students with hands-on research experience in terrestrial biosphere modeling, including model representation of hydrological processes and major biogeochemical cycles (carbon, nitrogen, phosphorus), model implementation, validation and interpretation, and TBM's applications in climate change impact assessment, carbon and ecosystem management, greenhouse gas accounting, water and environmental sustainability.

Senior Environmental Geoscience Research Seminar I

Snyder, Noah P, PHD;Wilson, Kathleen

Fall 2024

In this two-semester course sequence, students will be introduced to the process of conducting original scientific research. This includes exploring fundamentals of a natural system from reading the scientific literature, defining a problem, designing and executing an experiment, analysis, data interpretation, and presentation of results in written and oral formats. Students will work individually or in groups within a broader research project. Topics and field areas will vary from year to year depending on existing projects and expertise of the instructor. The EESC5582-5583 sequence fulfills the senior research experience requirement for Environmental Geoscience majors.

This course explores current theories about the origins of life, beginning with the original hypothesis of the Russian biochemist A.I. Oparin. Darwin's theory of evolution is emphasized, but many different components of the natural sciences touch upon this topic. The course lectures include the study of the oldest fossils, life in extreme habitats, cellular biology, prebiotic molecules, and the search for life on other planets.

Climate Change and Society

Ming, Yi

Spring 2025

Global climate change may be one of the biggest issues facing humanity in the twenty-first century. We investigate the scientific basis for global warming forecasts from what is well known to what is deeply uncertain based on theory, models, and the geologic record of earth's climate history. We discuss the political, economic, and social dimensions surrounding the global warming debate, and explore the current and potential impacts of climate change on developed and developing societies. Connections to recent media will be emphasized to give students an up-to-date view on the state of our national conversation on climate change.

Living on the Coast

Wilson, Kathleen

Spring 2025

This introductory course explores the dynamic interactions between coastal processes and human societies. Students will investigate the physical, ecological, and social dimensions of coastal living, including the challenges and opportunities posed by coastal environments. The structure of the class will be split into two modules. The first will establish a shared understanding and basis of knowledge for all students on the processes that shape coastal landscapes. The second will delve into 5 case studies, where we will explore diverse coastal landscapes and the connections between coastal processes, hazards, built environments, and society. There will be weekly formative assessments in the form of quizzes or reading reflections to assess student learning and engagement with the material.

Cosmos

Kuchar, Thomas A

Spring 2025

Open to all students.. There are more than a dozen interplanetary probes from numerous countries that are currently collecting data from several planetary bodies in the Solar System. These exploration missions are expanding knowledge of our Solar System, which is mostly built on only about half a century of space exploration. We will discuss these space missions and their scientific goals and results, which are increasingly oriented to answer questions on planetary evolution and the possibility of extraterrestrial biospheres. Throughout this course, the fundamentals of how science works will be emphasized. If weather permits, there might also be outdoor lectures for star-gazing opportunities.

The climate system is a complex machine for moving energy around the planet that depends on myriad interactions between air, water, ice, rocks, and life on various time and space scales—and it affects nearly every aspect of the environment we live in. Throughout Earth's 4.5 billion year history, climate has experienced periods both warmer and colder than today, as evidenced by records of environmental change preserved in natural archives. Today, human activity is the largest driver of change in the global climate system. This course provides an introduction to how Earth's climate works, the history of past climate changes, current trends and projected future conditions—all focused on parsing out what is well known to what is deeply uncertain. We will close with a brief survey of the political, economic, and sociological dimensions of climate change to understand how the science fits into a larger framework.

Geospatial Data Analysis for Environmental Sustainability

Pan, Shufen

Spring 2025

Geospatial data and technologies permeate every aspect of our lives, from the navigation apps on our smartphones to the intricate management of city infrastructure and natural resources. This course introduces the fundamental principles and methodologies in geospatial analysis. Students acquire essential knowledge and skills in GIS, remote sensing, statistical modeling, AI, and more. Real-world case studies provide practical applications for how geospatial approaches can tackle challenges such as climate change, food and water security, and public health. Learning geospatial data quantitative analysis is imperative for effective environmental analysis, management, and communication, empowering students to contribute meaningfully to a sustainable future.

Topics in Geobiology

Dept

Spring 2025

Geobiology is broadly concerned with the dynamic interface between biology and geology as deduced from Earth's 4-billion-year rock record. This year's topic will focus on Paleobotany and Palynology - the evolution of photosynthesis and the fossil record of cyanobacteria, algae and plants, those organisms primarily responsible for the generation of the modern-day atmosphere. The course starts with an introduction to historical geology and Precambrian life, followed by the evolutionary biology of photosynthetic life in terrestrial and marine environments through geologic time. Students taking this course should gain a deeper appreciation of the influence of biological evolution on the composition and dynamics of today's atmosphere.

Alternative Energy

Swann-Quinn, Jesse

Spring 2025

Modern society relies upon energy to support nearly all aspects of social and economic activity. Historically, this energy has come from fossil fuels (coal, oil, natural gas). Important questions concerning these energy sources' availability, along with their social and environmental impacts, contribute to increasing interest in developing alternative energy technologies (e.g., solar, wind, geothermal, tidal, etc.) Through interdisciplinary lenses, this course explores the dynamics and tensions of our current energy transitions, giving particular focus to sustainable energy resources. Students will investigate the social and environmental relationships, processes, and impacts comprising these challenges, and their possible solutions.

The IPCC Scientific Assessment

Shakun, Jeremy D

Spring 2025

This seminar will focus on the IPCC AR6 (2021) Working Group I report (Physical Science Basis). The IPCC stands for Intergovernmental Panel on Climate Change and is the main international organization for assessing the current state of scientific knowledge about global climate change. The IPCC reports are a result of contributions from thousands of scientists from all over the world, and are a comprehensive summary of the current state of climate change research. This course is intended for students with an introductory background in climate change science who want to gain a deeper understanding of it, particularly those aspects of greatest relevance to society. We will follow a reading-and-discussion format. Students will be expected to carefully read the assigned parts of the report, lead some of the discussions, and actively participate in all of the discussions.

Environmental Seismology Seminar

Lamontagne, Anne

Spring 2025

One scientist's noise is another scientist's data. This seminar course will integrate many fields of earth science by focusing on applications of seismology with non-traditional seismic sources. Although seismological data has historically been used to monitor earthquakes and the deep earth interior, recently environmental and surface process scientists have been repurposing it to investigate other natural phenomena. Topics may include utilizing seismic data to study glacial dynamics, landslides, cyclones, induced seismicity and more. Students will be expected to read and report on scientific literature, and prepare and present a literature review project on a selected topic within the realm of environmental seismology

EESC667001

Environmental Seismology Seminar

Lamontagne, Anne

Spring 2025

One scientist's noise is another scientist's data. This seminar course will integrate many fields of earth science by focusing on applications of seismology with non-traditional seismic sources. Although seismological data has historically been used to monitor earthquakes and the deep earth interior, recently environmental and surface process scientists have been repurposing it to investigate other natural phenomena. Topics may include utilizing seismic data to study glacial dynamics, landslides, cyclones, induced seismicity and more. Students will be expected to read and report on scientific literature, and prepare and present a literature review project on a selected topic within the realm of environmental seismology.

Special Topics in Geomorphology

Wilson, Kathleen

Spring 2025

The Boston Evening Geomorphology Seminar course formalizes an ongoing multi-institution seminar series. Faculty and students from Boston College, Boston University, and MIT regularly meet at each of the universities and discuss high-impact, peer-reviewed papers on geomorphology topics. Students enrolled in the course will attend regular meetings of BEGS and lead the paper discussion when BEGS is hosted at BC. Additional meetings of BC students will cover focused topics in coastal and fluvial geomorphology.

EALC431101

Advanced Korean I

Rhee, Kyung-Jin

Fall 2024

Conducted in Korean. Satisfies Foreign Language Proficiency core requirement. Advanced Korean I is designed for students who have completed Continuing Korean II, Continuing Korean: Accelerated, or who have equivalent proficiency. Students will consolidate previously learned grammatical patterns and vocabulary through written and audio-visual materials on a variety of topics. By exploring the thesis topics in Korean, students will not only enhance their language skills of listening, reading, speaking and writing in Korean, but will also allow them to better comprehend Korean culture and society. Emphasis will be placed on developing abilities to present opinions and elaborate ideas through discussions and writings. Moreover, Chinese characters will be added in this course with the purpose of expanding vocabulary to the advanced level.

EALC216101

Ghosts and Strange Happenings in Chinese Literature

Chiang, Sing-chen L

Spring 2025

Introduction to the East Asian classic Extensive Records for the Era of Great Peace, an encyclopedic collection of classical Chinese "records of anomalies" (zhiguai) about ghosts, immortals, monsters, fantastic lands, and other such "strange-but-true" happenings. Compiled by the court in the tenth century, the collection soon became an influential source of creative inspiration for East Asian writers. Students will learn about the diverse literary, philosophical, and religious traditions that helped shape these fascinating narratives. Special attention will be paid to the historical conditions that the stories reflect, including moral values, gender roles, and sociopolitical issues. No prerequisite. Taught in English.

Accelerated Intermediate Korean

Ju, Jaehee

Spring 2025

Conducted mostly in Korean. Satisfies Foreign Language Proficiency core requirement. This course is a continuation of Accelerated Elementary Korean and is for those who have received significant exposure to Korean language and culture and thus have a good command of listening and speaking skills. It is an accelerated course covering important grammatical structures and materials from Intermediate Korean I & II for the purpose of providing tools to build upon the foundation of students Korean language ability. Hence, this class is designed to meet the linguistic needs that are unique to heritage language students to (i) increase accuracy in grammar, (ii) develop basic reading writing skills, and (iii) expand vocabulary through introduction of Chinese characters. Upon completion of this course, students will fulfill Korean language requirement.

The European Union and Lisbon as an Economic, Political & Cultural Gateway

Albuquerque, Rui

Summer 2024

This course offers an introduction to the European Union. We revisit the origins of the EU after World War II and the various stages of growth with countries joining the EU at different points in time. The course discusses the expansion of integration that has taken place in Europe, from the coordination of trade policies, to coordination of economic policies, including monetary policies and integration of local banking sectors, and free movement of capital and labor. The course combines classroom presentations and invited speakers with site visits.

Aspects of Economic Growth

Ozkara, Yusuf

Summer 2024

This course aims at providing both the theory and empirics of modern economic growth theories. In addition to Classical and Neoclassical economic growth approaches, current views such as endogenous growth theory will be discussed. Emphasis will be placed on why some countries lag behind others and ways to solve this problem. The factors that are affecting economic growth such as technology, capital accumulation, change in employment, education, human capital, saving, energy consumption, democracy are studied in detail. The course also addresses the role of financial markets and policy formulation of economic growth.

Environmental Economics and Policy

Visaggio, Pietro

Summer 2024

This course provides an introduction to the economics of environmental policy. We begin by examining market failures from externalities and public goods. We then discuss public policy options to correct these failures, and develop tools to assess the costs and benefits of each approach. With this framework in place, the remainder of the course is spent evaluating past efforts to conserve land and improve air and water quality, before concluding with an extensive discussion about global climate change policy.

This course provides an introduction to the economics of environmental policy. We begin by examining market failures from externalities and public goods. We then discuss public policy options to correct these failures, and develop tools to assess the costs and benefits of each approach. With this framework in place, the remainder of the course is spent evaluating past efforts to conserve land and improve air and water quality, before concluding with an extensive discussion about global climate change policy.

ECON228901

Which is Better? An Economic Comparison of Health Care in France, the U.K., and the U.S.

Regan, Tracy L

Summer 2024

This course is designed as an introduction to the health care systems of the U.S., the U.K., and France. In 2010, the WHO carried out the first ever analysis of the world's health systems and found that France provided the best overall health care. The U.K. was ranked #18 and the U.S. at #37. This couples with the U.S. spending 17.2% of its GDP in 2016 on health expenditures despite not having particularly good health outcomes (e.g., 38.2% obesity rate, 2015). By comparison, France only spends 11% of its GDP on health expenditures and has an obesity rate of 19.5%. The New York Times recently published a series of articles attempting to understand why the U.S. spends so much more than other (developed) countries and did not note and differences in utilization rates, for example, and instead explained the phenomena by referencing Uwe Reinhardt's famous 2003 paper entitled, "It's the Prices Stupid." In 2011, the BBC was happy to report the better health the English enjoyed relative to the Americans despite similar demographics (and worse weather and food!). This course will introduce students to these three representative health care systems and will seek to understand the disconnect between health care outcomes and spending. The 2010 Affordable Care Act essentially preserved the privatized nature of health care in the U.S. despite nearly every other (developed) country in the world having universal coverage.

Game Theory in Economics

Tasci, Emine

Summer 2024

This course is an introduction to game theory. Game theory consists of a coherent set of concepts and analytical tools to examine interactive or strategic situations between people, that is, situations where the well being of one actor depends not only what s/he does but also on what others do. Hence in deciding how best to act, each person needs to consider how others are likely to act as well. Game theory has become a widely used tool of analysis in a wide range of disciplines, including economics, business, political science, law, and international relations.

Economics of Inequality

Runyun, Mustafa

Summer 2024

The course will provide both a theoretical and empirical analysis of economic inequality. This will include analysis and discussion of recent trends in inequality and an examination of the economic causes and consequences of inequality. Specific attention will be paid to the difference between inequality of economic outcomes (e.g., employment status, earnings, and occupation) and inequality of economic opportunity. The course will also touch on economic policy, including discussions of programs designed to combat inequality of outcomes, like welfare and food stamps, as well as those designed to combat inequality of opportunity, like Head Start.

Financial Economics

McMiken, Shane R

Summer 2024

This undergraduate elective focuses on financial economics, with specific emphasis on asset pricing and the valuation of risky cash flows. After developing and studying the details of consumer decision-making under uncertainty, it uses that general framework as a basis for understanding both equilibrium and no-arbitrage theories of securities pricing, including traditional models like the capital asset pricing model (CAPM), newer Arrow-Debreu theories, and, if time permits, arbitrage pricing theory (APT), the consumption capital asset pricing model (CCAPM), and martingale pricing methods.

Machine Learning for Economics

Coskun, Yunus Semih

Summer 2024

The world we live in is characterized by an exponential increase in data that accurately describe our daily lives, referred to as "big data." To harness this information, new methods like Machine Learning and Artificial Intelligence have emerged, enabling high-dimensional statistical analyses. The aim of this course is to provide students with an introduction to modern data-driven learning, particularly for causal economic analysis. While we will cover the theoretical foundations, our emphasis will be on application and learning how and when to use these methods effectively, as well as identifying their limitations. The coursework comprises homework assignments utilizing simulated and real-world data, weekly online discussions on real-life data analysis problems, and a group project in the form of a case study. We will use R as our primary data analysis software and devote a significant amount of class time to teaching how to efficiently code various analytical models. Prior coding experience is welcome but not necessary, as everything you need to know about R will be taught from scratch.

Urban Action Lab

Perkins, Taylor A

Fall 2024

Urban Action Lab is a semester long class that provides students with first hand experience within the field of real estate and urban action, working on projects that advance affordable housing and access to opportunity. Students pursue research projects in partnership with mission driven organizations from across the City of Boston. Each project is completed in collaboration with a partner organization and are selected based on their potential for high-impact contribution to the organization. Project components include research, evaluation, interviewing, and writing. Students will work in close collaboration with partner agencies and fellow students. The class will meet once per week and will occasionally require students to attend meetings off-campus.

ECON150301**Exchange and Values: Stories and Measures of Inequality****Erbil, Can****Fall 2024**

This is a Complex Problem course and is open to FRESHMEN only. You must take ENGL1738 with this course. This course explores inequality through a blend of literature and economics, providing a rich, interdisciplinary perspective. By examining real world cases, literary narratives, and economic data, students will understand different forms of inequality in society. The course is organized around five key themes and includes interactive lectures and labs for in-depth analysis. It is designed to foster critical thinking about social justice, encouraging students to reflect on their values and aspirations in relation to societal inequities. This engaging course aims to deepen students' awareness and understanding of the economic and social aspects of inequality.

Real Estate and Urban Action: Transforming Communities and Increasing Access to Opportunity

Sanzenbacher, Geoffrey T

Fall 2024

This is a Complex Problem course and is open to FRESHMEN only. You must take UNAS1725 with this course. This course explores concepts of social, economic, and racial inequality with a focus on the interaction between housing, labor markets, and the ultimate accumulation of wealth. Housing will be examined through a study of the history of affordable housing, an exploration of the transformation of Columbia Point Public Housing Development to Harbor Point, and an applied simulation. Labor markets will be explored at the theoretical level (e.g., labor supply/demand, human capital, discrimination) before diving into data and literature on how changes over the last 40 years have expanded inequality. The course will conclude with how the lack of both affordable housing and quality labor market opportunities can interact to restrict intergenerational wealth accumulation and opportunity. Through field projects, simulations, and a practical final project, the course will challenge students to explore and test solutions for transforming distressed communities into safe, desirable neighborhoods that produce better outcomes for all residents.

This course explores concepts of social, economic, and racial inequality with a focus on the interaction between housing, labor markets, and the ultimate accumulation of wealth. Housing will be examined through a study of the history of affordable housing, an exploration of the transformation of Columbia Point Public Housing Development to Harbor Point, and an applied simulation. Labor markets will be explored at the theoretical level (e.g., labor supply/demand, human capital, discrimination) before diving into data and literature on how changes over the last 40 years have expanded inequality. The course will conclude with how the lack of both affordable housing and quality labor market opportunities can interact to restrict intergenerational wealth accumulation and opportunity. Through field projects, simulations, and a practical final project, the course will challenge students to explore and test solutions for transforming distressed communities into safe, desirable neighborhoods that produce better outcomes for all residents.

The State of Affordable Housing in the States

Price, David W

Fall 2024

Course offered for Sophomores only.. How does housing affect the lives of Americans? Where you live determines your access to schools, quality of healthcare, fresh food, clean air, parks and recreation, affordable credit, and even how long you are likely to live. This course explores concepts of housing policy and planning at the national, state, and local levels. It examines programs and policies used to subsidize housing for millions of Americans and help them gain access to a decent place to live. Topics will be considered from multiple perspectives including housing finance, design, community planning, inequality, operations management, and sustainability. We will explore the historical and economic context of U.S. housing and discuss the barriers that low-income families face that affects their access to decent housing. The course will be divided into three sections: history, policies, and today's issues. Students will explore some of the most recently developed programs and how they fit into effective community revitalization. These programs will be evaluated in class discussions and group presentations.

Real Estate Colloquium

McCullagh, Neil P;Perkins, Taylor A

Fall 2024

Real Estate Colloquium provides an overview of the field of Real Estate. Each session welcomes one or more Real Estate professionals to present on finance, investment, law, planning, and public policy. Real Estate Colloquium will offer insight into diverse topics such as Real Estate Investment Trusts (REITs), capital markets, leasing, brokerage, and development. Representatives from across the industry will lecture and provide a comprehensive view of the intricate world of Real Estate and the multiple disciplines that contribute to the industry. This course will give students an immersive experience beyond theoretical concepts and a view into the fundamentals of many different topics and career paths. The class meets once per week across the semester, and students must attend seven of fourteen sessions and host at least one session in partnership with a classmate.

Financial Forecasting

Mc Gowan, Richard, SJ

Fall 2024

The theory and practice of applied time series analysis will be explored. First the different segments (trend, seasonality, cyclical, and irregular) of a time series will be analyzed by examining the Autocorrelation functions (ACF) and Partial Autocorrelation functions (PACF). The specifics model to model the various types of time series include linear regression, panel regression, seasonal decomposition, exponential smoothing, ARIMA modeling as well as combining models. This course is offered as an online hybrid course. In addition to the online lectures presented on the Canvas LMS, there are three required on-campus class meetings on Saturday mornings. Please see the course syllabus for additional details.

Kazemi, Hossein S

Fall 2024

The impact of news on financial markets is examined in this course. More specifically, this course studies how Central Banks and Financial Markets react to economic and financial news. Using tools of economics and finance, the impact of macroeconomic data releases, business and financial news, as well as domestic and global political news on the financial markets will be measured and evaluated in this course. It further examines how the markets, including bonds, equities, commodities and foreign exchange markets, react to the news.

Community Development & the Evolution of Place-Making

Bennett, Kate

Fall 2024

What goes into neighborhood transformation? Community Development & the Evolution of Place-Making, immerses students in the multifaceted challenges of community development covering topics such as community mobilization, equity, organizing, sustainable development, and community empowerment. In Community Development & the Evolution of Place-Making, students explore positive social change by engaging with large-scale transformational housing projects. Through lectures, site visits, and case studies, students will see transformational projects and learn from a renowned expert in community transformation. The class emphasizes collaboration, cultural sensitivity, and involving community members in decision-making to ensure the development initiatives are contextually relevant and sustainable. Community Development & the Evolution of Place-Making is a gateway for students to develop knowledge and further explore community development related to community engagement, public policy, and real estate.

Aspects of Economic Growth

Ulusoy, Veysel

Fall 2024

This course aims at providing both the theory and empirics of modern economic growth theories. In addition to Classical and Neoclassical economic growth approaches, current views such as endogenous growth theory will be discussed. Emphasis will be placed on why some countries lag behind others and ways to solve this problem. The factors that are affecting economic growth such as technology, capital accumulation, change in employment, education, human capital, saving, energy consumption, democracy are studied in detail. The course also addresses the role of financial markets and policy formulation of economic growth.

Global Horizons beyond Boston College: Integrating Ethics, Economics, and the Common Good

Erbil, Can

Fall 2024

This seminar is ideal for seniors in the Economics and International Studies programs, aiming to apply their accumulated academic knowledge and their Boston College experience in a complex global context. "Global Horizons" invites students to explore the intricate interplay between global economic systems and ethical considerations, emphasizing a multidisciplinary approach that integrates insights from environmental science, public policy, sociology, psychology, and more. The course will emphasize the Common Good, social well-being and the pursuit of a just society. Throughout the course, students will engage with advanced economic theories and models, applying them to analyze and propose solutions to pressing global issues such as international trade, labor practices, and sustainable development. The course challenges students to consider the ethical dimensions of economic policies and practices, connecting their entire academic journey to Boston College's commitment to moral discernment and the Common Good, one last time before they graduate and start to make their own mark in the world beyond The Heights.

Game Theory in Economics

Biavati, Michele

Fall 2024

This course is an introduction to game theory. Game theory consists of a coherent set of concepts and analytical tools to examine interactive or strategic situations between people, that is, situations where the well being of one actor depends not only what s/he does but also on what others do. Hence in deciding how best to act, each person needs to consider how others are likely to act as well. Game theory has become a widely used tool of analysis in a wide range of disciplines, including economics, business, political science, law, and international relations.

ECON331401**How Incentives Explain Seemingly Irrational Behavior****Burum, Bethany****Fall 2024**

Behavioral Economics and social psychology have revealed many surprising quirks of social behavior, providing robust evidence that people deceive themselves, are systematically overconfident, believe implausible things to avoid inconsistency, and so on. This course will demonstrate that we can make sense of these seeming irrationalities through understanding how incentives shape behavior. We begin by understanding how genetic and cultural evolution shaped us to respond to certain incentives, including material resources and the social rewards (peer approval, a good reputation, etc.) that have long been associated with resources and mating opportunities. We then investigate how incentives operate in both blatant and subtle ways to motivate our behavior, applying this lens to many of the greatest hits from behavioral economics and social psychology, including confirmation bias, strategic ignorance, insensitivity to impact in charitable giving, and more. Assignments will focus on how to evaluate empirical research and test explanations convincingly.

The course will provide both a theoretical and empirical analysis of economic inequality. This will include analysis and discussion of recent trends in inequality and an examination of the economic causes and consequences of inequality. Specific attention will be paid to the difference between inequality of economic outcomes (e.g., employment status, earnings, and occupation) and inequality of economic opportunity. The course will also touch on economic policy, including discussions of programs designed to combat inequality of outcomes, like welfare and food stamps, as well as those designed to combat inequality of opportunity, like Head Start.

Money and Financial Markets

Kazemi, Hossein S

Fall 2024

This course covers topics such as the significance and multiple functions of money in the economy, the behavior of interest rates, the banking system, financial markets, and the management of financial institutions. This course further covers the Federal Reserve System and the conduct of monetary policy, different asset classes, the foreign exchange market, and the international financial system. There is a heavy emphasis on use of market data and the analysis of economic releases--earnings reports, government policy statements, etc.--to provide a comprehensive introduction to the subject. Moreover, through an extensive use of Bloomberg in this class students learn how to access and analyze data and economic releases to provide a window into how modern practitioners in the discipline analyze financial markets. Experimental Economics

Coffman, Lucas

Fall 2024

This course is for anyone who wants to be able to answer questions using experiments. This course is an introduction to experimental methods, particularly those developed by economists. We will discuss in detail all of the steps of an experiment, from design, measurement and randomization, to cost and power analyses. This is strictly a methods course; the experiments we discuss are chosen to give a broad understanding of experimental methods, not a foundation of famous experimental results. Nonetheless, we will cover experiments in a variety of interesting fields: behavioral economics, economics of developing countries, discrimination, labor economics, cognitive and social psychology, and more. There are two main value-added from this course. First, you will be equipped to design and run an experiment to answer important questions. Second, in understanding what the optimal experimental design should look like, you will be armed with better lenses through which to view naturally existing data.

Applying Economic Theory in the Practice of Law

Felter, John K;Tang, Alicia

Fall 2024

In this seminar, we will investigate, discuss, and write about how the economic theory that you are learning can be applied in several areas of substantive and procedural law. We will apply both traditional (neoclassical) and behavioral economic theory. We will perform both positive and normative analyses. Among many other law and economics topics, we will explore how, thinking like economists, will enable you to analyze: the allocation and transfer of property rights, the effectiveness, efficiency and fairness of criminal laws, the deterrence and compensation goals of the tort (accident) law system, the effectiveness and efficiency of the laws and rules that govern the United States judicial system, applying game theory, why civil legal disputes are commenced and often, but not always, settle, the use or misuse of statistics and expert evidence, the efficiency and accuracy of jury trials, the effects of allocating attorneys' fees and fee-shifting in civil litigation, and the costs and benefits and operation of the United States patent law system. Throughout the semester, the emphasis will always be on how the economic theory that you are learning can be applied in the practice of law in real world situations.

Machine Learning for Economics

Cappello, Alberto

Fall 2024

The world we live in is characterized by an exponential increase in data that accurately describe our daily lives, referred to as "big data." To harness this information, new methods like Machine Learning and Artificial Intelligence have emerged, enabling high-dimensional statistical analyses. The aim of this course is to provide students with an introduction to modern data-driven learning, particularly for causal economic analysis. While we will cover the theoretical foundations, our emphasis will be on application and learning how and when to use these methods effectively, as well as identifying their limitations. The coursework comprises homework assignments utilizing simulated and real-world data, weekly online discussions on real-life data analysis problems, and a group project in the form of a case study. We will use R as our primary data analysis software and devote a significant amount of class time to teaching how to efficiently code various analytical models. Prior coding experience is welcome but not necessary, as everything you need to know about R will be taught from scratch.

Economics of Energy and the Environment

Sweeney, Richard L

Fall 2024

This course provides an overview of recent research in energy and environmental economics, with an emphasis on connecting policy questions of interest to available data and econometric methods. In the context of specific markets, we will first review the theoretical justifications for government intervention. We will then turn to the empirical evidence to see what recent economic scholarship has to say about a variety of energy policy questions, including: Should we ban fracking? Do oil pipelines reduce property values? What is the best way to promote renewable energy? Should we be more energy efficient? Students will be required to read and discuss academic articles each week, as well as write an empirical term paper.

ECON339102

Economics of Energy and the Environment

Sweeney, Richard L

Fall 2024

This course provides an overview of recent research in energy and environmental economics, with an emphasis on connecting policy questions of interest to available data and econometric methods. In the context of specific markets, we will first review the theoretical justifications for government intervention. We will then turn to the empirical evidence to see what recent economic scholarship has to say about a variety of energy policy questions, including: Should we ban fracking? Do oil pipelines reduce property values? What is the best way to promote renewable energy? Should we be more energy efficient? Students will be required to read and discuss academic articles each week, as well as write an empirical term paper.

Computational Methods in Macroeconomics

McNelis, Paul D, SJ

Fall 2024

This course examines how to construct and estimate dynamic stochastic general equilibrium (DSGE) models for comparative policy analysis, interpreting the relative importance of key policy variables, as well as exogenous forces as key drivers of economic cycles and growth. The course will start with linear models with forward-looking expectations but will also take up nonlinear methods for understanding the zero-lower bound on interest rates and external borrowing limits of small economies for understanding economic adjustment in times of crisis.

ECON772001

Math for Economists

Ireland, Peter N

Fall 2024

"Economics studies the efficient allocation of scarce resources." It follows almost immediately from this definition that while verbal and graphical analyses are often helpful too, economists derive their sharpest and most powerful results by setting up and solving constrained (because resources are "scarce") optimization (because allocations should be "efficient") problems. Hence, this course introduces first-year graduate students to variety of techniques for doing just that: setting up and solving constrained optimization problems. Specific methods covered include those based on the Kuhn-Tucker and envelope theorems, the maximum principle, and dynamic programming. Note that since this is a "math for economists course", its emphasis is not so much on stating and proving theorems but on developing an intuitive understanding of how and why each method works and determining when one particular approach may be easier or more convenient than all others to apply to a specific problem.

Experimental Economics

Coffman, Lucas

Fall 2024

This class is an introduction to experimental methods in economics. We will cover all the steps of an experiment from design, measurement, and randomization to practical considerations like cost and power analyses. This is mainly a methods course; the experiments we discuss are chosen to give a broad understanding of experimental methods (e.g., lab, field, and online studies, experiments in developing countries, interventions in organizations, and so on). The course is not intended to provide a foundation of famous experimental results overall or for any one topic. The take-away of the course is to develop the ability to design a confound-free experiment regardless of question or context.

This class covers methods and applications in not only international trade but also spatial economics: the two Nobel prize winners in trade, Ohlin and Krugman, earned their reputation due to their contributions to both international trade and economic geography. I will begin with covering a few basic models of international trade that serve as the backbone of many other subsequent frameworks. We will then extend these basic models to richer setups, including those in spatial economics. I am thinking also to cover methods and tools in the area of trade and the environment as well as optimal policy designs, which are important when there are market failures such as in the presence of scale economies or when it comes to climate change.

International Macroeconomics

Nosal, Jaromir B

Fall 2024

This course will focus on the construction of models for understanding the international business cycle and analysis of macroeconomic policy in open economies. The first part will focus on the transmission of macroeconomic shocks across countries, from the international real business cycle literature to models with nominal rigidity and financial imperfections. The second part will cover the recent literature on macroeconomic policy in open economies. The third portion of the course will return to model building and shock transmission and focus on the recent literature at the intersection between international trade and macroeconomic theory.

Game Theory and Applications

Ekmekci, Mehmet

Fall 2024

In this elective advanced Graduate Class, we will cover many topics and problems that fall under the category game theory with more emphasis on dynamic games and repeated games. Although we will study some topics of dynamic games with complete information, there will be a disproportionate weight on problems with asymmetric information, and problems in which there are elements related to learning. More specifically, we will study Repeated Games, Reputation Games, Bargaining, Experimentation and Information Aggregation. Students should have a strong background in Mathematical tools used in economics, and should have taken an advance undergraduate course in Game Theory, and/or first year Graduate Micro sequence.

Urban Action Lab

Frechette, Edward K;McCullagh, Neil P

Spring 2025

Urban Action Lab is a semester long class that provides students with first hand experience within the field of real estate and urban action, working on projects that advance affordable housing and access to opportunity. Students pursue research projects in partnership with mission driven organizations from across the City of Boston. Each project is completed in collaboration with a partner organization and are selected based on their potential for high-impact contribution to the organization. Project components include research, evaluation, interviewing, and writing. Students will work in close collaboration with partner agencies and fellow students. The class will meet once per week and will occasionally require students to attend meetings off-campus.

ECON170201**Life, Liberty, & Health: The Economics of Healthcare****Regan, Tracy L****Spring 2025**

This is an Enduring Question course and is open to FRESHMEN only. You must take both ECON1702 and UNAS1702. Why is healthcare so interconnected with policy, law, and economics? Recently, health has become a central focus of political infighting, public discord, and personal worry. Healthcare and health insurance now dominate everything from think tanks to Jimmy Kimmel Live! Meanwhile, concussions go up, NFL ratings go down, drug prices soar, and opioid abuse damages individuals, families, the healthcare system, and the economy. Such complex issues are best understood through interdisciplinary study. These paired courses will introduce basic principles of economics, law, and public policy through the lens of contemporary problems involving enduring questions of government authority and individual autonomy, morality and ethics, social justice, and human rights.

ECON170301

The American Divide: The Economics of Inequality

Sanzenbacher, Geoffrey T

Spring 2025

This is an Enduring Question course and is open to FRESHMEN only. You must take both ECON1703 and PHIL1711. How should we interpret our nation's persistent inequalities when our founding documents assert the equality of all? Concern over inequality in the U.S. has shown itself in movements like Occupy Wall Street, the Fight for a Fifteen Dollar Minimum Wage, and Black Lives Matter, and has become even more of a focus since the COVID-19 pandemic. These paired courses will examine the meaning, causes, and consequences of inequality from the perspectives of economics and philosophy. Providing a broad picture of the current state of the U.S. economy and analyzing the role of economic policy in determining opportunities and outcomes, these courses will prepare students to develop their own views about how past economic choices have shaped current economic realities and how we might create a more equitable future.

Sanzenbacher, Geoffrey T

Spring 2025

This is an Enduring Question course and is open to FRESHMEN only. You must take both ECON1703 and PHIL1711. How should we interpret our nation's persistent inequalities when our founding documents assert the equality of all? Concern over inequality in the U.S. has shown itself in movements like Occupy Wall Street, the Fight for a Fifteen Dollar Minimum Wage, and Black Lives Matter, and has become even more of a focus since the COVID-19 pandemic. These paired courses will examine the meaning, causes, and consequences of inequality from the perspectives of economics and philosophy. Providing a broad picture of the current state of the U.S. economy and analyzing the role of economic policy in determining opportunities and outcomes, these courses will prepare students to develop their own views about how past economic choices have shaped current economic realities and how we might create a more equitable future.

Real Estate Colloquium II

Perkins, Taylor A

Spring 2025

Real Estate Colloquium II - Innovation Field Study provides first-hand experience touring innovative projects, buildings, neighborhoods, and factories that define real estate's future. The course will explore critical debates within the industry by exploring the city and region with leaders and professionals working to change the face of our cities and communities. Students will explore how innovation strives to meet contemporary challenges. Topics will include office-to-residential conversion, retail and revitalization, climate crisis mitigation, modular construction, and infrastructure. This course offers students an immersive experience beyond theoretical concepts and a view into the fundamentals of many different topics and career paths. The course will feature six 3-hour field visits, with each student attending three. Field visits will include an orientation lecture, a group debrief, discussion, and reflection. Students will attend an opening and closing lecture in person at Boston College. They will also be required to submit written reflections after each field visit, and a final paper. The Corcoran Center will provide transportation to each field visit via minibus.

Behavioral Economics

Biavati, Michele

Spring 2025

This course explores the field of behavioral economics, which integrates insights from psychology, sociology, and neuroscience into traditional economic models to better understand real-world decision making. By examining how individuals often deviate from the prediction of standard economic theory, we will investigate key behavioral anomalies and the way economists seek to explain them. Topics will include self-control and temptation, reference points and decision framing, bounded rationality, and decision-making under conditions of risks and uncertainty. Through this course, students will gain a deeper understanding of how human behavior influences economic outcomes and the implications for policy and business strategies.

Financial Forecasting

Mc Gowan, Richard, SJ

Spring 2025

The theory and practice of applied time series analysis will be explored. First the different segments (trend, seasonality, cyclical, and irregular) of a time series will be analyzed by examining the Autocorrelation functions (ACF) and Partial Autocorrelation functions (PACF). The specific models to model the various types of time series include linear regression, panel regression, seasonal decomposition, exponential smoothing, ARIMA modeling as well as combining models. This course is offered as an online hybrid course. In addition to the online lectures presented on the Canvas LMS, there are three required on-campus class meetings on Saturday mornings. Please see the course syllabus for additional details.

The impact of news on financial markets is examined in this course. More specifically, this course studies how Central Banks and Financial Markets react to economic and financial news. Using tools of economics and finance, the impact of macroeconomic data releases, business and financial news, as well as domestic and global political news on the financial markets will be measured and evaluated in this course. It further examines how the markets, including bonds, equities, commodities and foreign exchange markets, react to the news.

ECON226901

Aspects of Economic Growth

Ulusoy, Veysel

Spring 2025

This course aims at providing both the theory and empirics of modern economic growth theories. In addition to Classical and Neoclassical economic growth approaches, current views such as endogenous growth theory will be discussed. Emphasis will be placed on why some countries lag behind others and ways to solve this problem. The factors that are affecting economic growth such as technology, capital accumulation, change in employment, education, human capital, saving, energy consumption, democracy are studied in detail. The course also addresses the role of financial markets and policy formulation of economic growth.

Development and Social Justice in Korea

Hwang, Ingu

Spring 2025

This course introduces students to the political and economic changes that South Korea experienced from the 1960s to the present and explores how these changes contributed to social unrest, to demands for greater democracy, and to other social justice issues. In doing so, it will address how South Korea's economic and political trajectory was informed by pressures at the international, national, and sub-national level and compare the South Korean case to that of other Asian nations. Fulfills the LAMA requirement for History Majors

Economics of Discrimination

Deb, Rahul

Spring 2025

This course investigates differences in economic outcomes (job interviews, wages, policing and judicial decisions etc.) by group characteristics (gender, race etc.). We explore the potential reasons for these differences and specifically, when these differences are the result of discrimination. We study the economic theories of the distinct forms of discrimination and the empirical work testing those theories. Throughout, we will discuss policies to alleviate group-level differences wherever present.

ECON300002

Economics of Discrimination

Deb, Rahul

Spring 2025

This course investigates differences in economic outcomes (job interviews, wages, policing and judicial decisions etc.) by group characteristics (gender, race etc.). We explore the potential reasons for these differences and specifically, when these differences are the result of discrimination. We study the economic theories of the distinct forms of discrimination and the empirical work testing those theories. Throughout, we will discuss policies to alleviate group-level differences wherever present.

Health and the Environment: People, Policy and Technology

Severnini, Edson R

Spring 2025

This course examines the relationship between health and the environment, focusing on how pollution, climate change, and ecosystem changes influence human health. Students will learn how these environmental factors impact public health and explore the roles of public response, policy, and technology in reducing health risks. The course is structured around three main components: Pollution and Health, Climate Change and Health, and Ecosystem Changes and Health. Through an interdisciplinary approach, students will engage with scientific research, real-world examples, and policy discussions to develop a comprehensive understanding of the links between health and the environment and address complex environmental health challenges.

ECON324201

Economics of Aging

Rutledge, Matthew S

Spring 2025

In a world facing the challenges associated with rapidly aging populations, the tools of economics will be essential to designing effective public policy solutions. This course first describes the institutional environment--including Social Security, Medicare, Medicaid, and employer retirement plans--in which individuals and families make decisions about their older years. It also debates potential reforms that aim to resolve the shortcomings and inequities of those policies and to put them on sounder fiscal footing. Then students will conduct their own empirical research with the same survey data used by professional economists, and learn how to effectively communicate the results to a broader audience.

Game Theory in Economics

Sonmez, Tayfun O

Spring 2025

This course is an introduction to game theory. Game theory consists of a coherent set of concepts and analytical tools to examine interactive or strategic situations between people, that is, situations where the well being of one actor depends not only what s/he does but also on what others do. Hence in deciding how best to act, each person needs to consider how others are likely to act as well. Game theory has become a widely used tool of analysis in a wide range of disciplines, including economics, business, political science, law, and international relations.

ECON331201**Evolutionary Economics****Cox, Donald****Spring 2025**

This course uses evolutionary biology to better understand the psychology of preferences, a central concept in economics. Why are people risk averse? Impatient? What explains novelty seeking, habits, addictions? What makes parents provide for children? We will use evolutionary thinking to explore these and a host of other diverse topics: violence, adolescent risk taking, sexual behavior, mating preferences, marriage and divorce, rearing and investing in children, extended families, trade and specialization, cooperation and conflict, cults and gangs, religion, and interactions between genetic and cultural forces. This course has an intensive research and writing requirement and enrollment is limited. You should be comfortable using Stata. Prerequisites: Micro theory and econometrics.

ECON332401**Money and Financial Markets****Kazemi, Hossein S****Spring 2025**

This course covers topics such as the significance and multiple functions of money in the economy, the behavior of interest rates, the banking system, financial markets, and the management of financial institutions. This course further covers the Federal Reserve System and the conduct of monetary policy, different asset classes, the foreign exchange market, and the international financial system. There is a heavy emphasis on use of market data and the analysis of economic releases--earnings reports, government policy statements, etc.--to provide a comprehensive introduction to the subject. Moreover, through an extensive use of Bloomberg in this class students learn how to access and analyze data and economic releases to provide a window into how modern practitioners in the discipline analyze financial markets. Prerequisites: macro theory and econometrics

Applying Economic Theory in the Practice of Law

Felter, John K

Spring 2025

In this seminar, we will investigate, discuss, and write about how the economic theory that you are learning can be applied in several areas of substantive and procedural law. We will apply both traditional (neoclassical) and behavioral economic theory. We will perform both positive and normative analyses. Among many other law and economics topics, we will explore how, thinking like economists, will enable you to analyze: the allocation and transfer of property rights, the effectiveness, efficiency and fairness of criminal laws, the deterrence and compensation goals of the tort (accident) law system, the effectiveness and efficiency of the laws and rules that govern the United States judicial system, applying game theory, why civil legal disputes are commenced and often, but not always, settle, the use or misuse of statistics and expert evidence, the efficiency and accuracy of jury trials, the effects of allocating attorneys' fees and fee-shifting in civil litigation, and the costs and benefits and operation of the United States patent law system. Throughout the semester, the emphasis will always be on how the economic theory that you are learning can be applied in the practice of law in real world situations.

ECON337601

International Economic Relations

Anderson, James

Spring 2025

Not open to students who have taken ECON3371 or ECON3372.. This course introduces the study of economic relations among countries. It combines material contained in ECON3371 and ECON3372, and substitutes for both those courses. Primarily designed for international studies majors, it is also appropriate for economics and other social science majors, with the proviso that the comprehensive coverage of the course implies that the workload is heavy and expectations for students are high. Topics include the determinants of trade in goods, services, and capital; the economic policies that nations use to influence such trade; the theory and practice of international macroeconomics; and problems of coordinating macroeconomic policies among countries. The course features the usefulness (and limitations) of game theory for explaining international economic interactions.

Machine Learning for Economics

McMiken, Shane R

Spring 2025

The world we live in is characterized by an exponential increase in data that accurately describe our daily lives, referred to as "big data." To harness this information, new methods like Machine Learning and Artificial Intelligence have emerged, enabling high-dimensional statistical analyses. The aim of this course is to provide students with an introduction to modern data-driven learning, particularly for causal economic analysis. While we will cover the theoretical foundations, our emphasis will be on application and learning how and when to use these methods effectively, as well as identifying their limitations. The coursework comprises homework assignments utilizing simulated and real-world data, weekly online discussions on real-life data analysis problems, and a group project in the form of a case study. We will use R as our primary data analysis software and devote a significant amount of class time to teaching how to efficiently code various analytical models. Prior coding experience is welcome but not necessary, as everything you need to know about R will be taught from scratch.

ECON777201

Econometric Methods

Lewbel, Arthur

Spring 2025

This course provides an understanding of the econometric theory that underlies common econometric models. The focus is on regression models and their many extensions. Topics include finite and asymptotic properties of estimators, consistency and limiting distributions, specification issues, heteroskedasticity, autocorrelation, endogeneity and simultaneity, and nonlinear model estimators including maximum likelihood and the generalized method of moments.

Mechanism Design

Unver, M Utku

Spring 2025

This course is going to cover some fundamental topics in mechanism and market design as well as some advanced ones. We will start with Bayesian mechanism design and dominant strategy mechanisms. Other topics include dynamic mechanism design, robust mechanism design, and axiomatic mechanism design. We will also consider non-transferable utility settings.

ECON882201

Cross Section and Panel Econometrics

Khan, Shakeeb**Spring 2025**

This course covers major advances in micro econometrics. The course will present developments in estimating models with limited dependent variables, random and fixed effects models, and duration models. More recent developments in the area, such as treatment effects, RDD (regression discontinuity design), DDC (dynamic discrete choice), partial identification, and nonlinear models with endogeneity will also be explored.

ECON887301

Empirical Methods in Macroeconomics and Finance

McNelis, Paul D, SJ

Spring 2025

We will study econometric models and methods that are useful to conduct substantive empirical research in macroeconomics and finance. We consider the estimation and evaluation of dynamic stochastic general equilibrium models, analysis of linear and nonlinear vector autoregressive models, time series models with regime switches and time-varying coefficients, as well as dynamic factor models. For the most part, we will focus on Bayesian methods of inference, with detailed discussions of suitable Markov-Chain-Monte-Carlo methods.

ENGR102501

Innovation through Design Thinking

Gaudette, Glenn R

Summer 2024

Would you like to be innovative in whatever you pursue? Innovation is about solving important and complex problems to create value for the greater good. Innovating through design thinking is a structured, human-centered process for creatively solving problems, which can be adopted by anyone. In this foundational course we will introduce the mindset, process and methods at the core of design thinking. Students will see inspiring case studies, hear from cutting edge practitioners, and work on a project to internalize this learning. Students will discover design thinking is a practical toolkit that helps them reliably innovate in the face of changing social needs, business disruptions, and technology shifts.

Making the Modern World: Design, Ethics & Engineering

Conroy, Kristen M

Fall 2024

This is a Complex Problem course and is open to FRESHMEN only. You must take HIST1627 with this course. Together we will consider how engineers and other stakeholders navigate risks related to industrial and environmental disasters, balance financial, technological, and regulatory pressures associated with complex socio-technical problems, and negotiate technical and political liabilities surrounding artificial intelligence, surveillance, and climate adaptation. Engineering systems present pressing technical, ethical, and moral problems that we must grapple with as engaged global citizens. In this course, students will explore the social, cultural, and institutional history of engineering, learn foundational skills in quantitative analysis of real-world engineering designs, and understand the political, environmental, economic, and ethical tradeoffs associated with building the modern world. Students will collaborate on group design projects based on human-centered engineering.

ENGR180109**Making the Modern World: Design, Ethics & Engineering****Perreault, Luke****Fall 2024**

This is a Complex Problem course and is open to FRESHMEN only. You must take HIST1627 with this course. Together we will consider how engineers and other stakeholders navigate risks related to industrial and environmental disasters, balance financial, technological, and regulatory pressures associated with complex socio-technical problems, and negotiate technical and political liabilities surrounding artificial intelligence, surveillance, and climate adaptation. Engineering systems present pressing technical, ethical, and moral problems that we must grapple with as engaged global citizens. In this course, students will explore the social, cultural, and institutional history of engineering, learn foundational skills in quantitative analysis of real-world engineering designs, and understand the political, environmental, economic, and ethical tradeoffs associated with building the modern world. Students will collaborate on group design projects based on human-centered engineering.

ENGR210101

Engineering Foundations Studio I

Mohebbi, Amin

Fall 2024

This course is designed to help students begin to mechanically analyze the physical objects in the world around them. Students will learn how to look at systems and determine how to model the forces and reactions for statically determinate systems. The course will also cover math topics including integrals and their applications, vectors, vector functions, vector calculus (introductory level). Fundamental themes of materials science-- structure-property-processing relationships in materials, specifically metals, ceramics, and plastics will also be investigated.

Credits: 3

Room and Schedule: Scientific Exploration Lab 013 MWF 10:00AM-10:50AM

Satisfies Core Requirement: None

Engineering Foundations Studio II

Govindasamy, Siddhartan

Fall 2024

Students in this course will further their knowledge and understanding of circuit elements such as resistors, capacitors, inductors, diodes and transistors. Students will learn to apply tools such as the Kirchoff current and voltage laws to analyze circuits, differential equations to analyze and design filters and analyze the frequency responses of circuits. Mathematical techniques such as solving first and second order differential equations, and the Fourier transform will be introduced in context of circuit applications.

Introduction to Statistical Data Analysis and Machine Learning

Mohebbi, Amin

Fall 2024

This course offers a comprehensive exploration of MATLAB's applications in the field of data science and machine learning. Throughout the program, students will engage in practical scripting and problem-solving, master data visualization techniques, and analyze data distributions and statistics. The course covers essential topics such as hypothesis testing, regression analysis, and the fundamentals of neural networks, equipping students with the skills to construct neural networks and integrate MATLAB into machine learning workflows. With a focus on supervised and unsupervised learning, students will learn to classify, regress, and cluster data while evaluating model performance and applying machine learning to real-world problems. Additionally, students will gain hands-on experience implementing clustering algorithms like K-Means and hierarchical clustering in MATLAB, concluding with insightful case studies and practical examples showcasing the versatility and power of data analysis with novel tools in engineering, mathematics, and scientific disciplines.

Advanced Engineering Foundations: Bioprocess Engineering

Hoar, Catherine

Fall 2024

Principles and applications of biotechnology and biological process engineering. This course will introduce students to the microbiological, biochemical, and physical processes applied in engineered biological systems. Topics include fundamentals of microbiology and molecular biology, reactor design, and transport processes in biological systems. Case studies will highlight biotechnology and bioprocess engineering applications in energy, health, and the environment including resource recovery, biofuel and chemical production, waste treatment, bioremediation, and production of pharmaceuticals.

Biomechanics

Gaudette, Glenn R

Fall 2024

This course emphasizes the applications of mechanics to describe the material properties of living tissues. It is concerned with the description and measurements of these properties as related to their physiological functions. Emphasis on the interrelationship between biomechanics and physiology in medicine, surgery, body injury and prostheses. Topics covered include: Review of basic mechanics, stress, strain, constitutive equations and the field equations, viscoelastic behavior, and models of material behavior. The measurement and characterization of properties of soft and hard tissues will be covered, along with biomechanics as related to body injury and the design of prosthetic devices.

Engineering Courses: Spring 2025

ENGR102501

Innovation through Design Thinking

Rutirasiri, Chokdee R

Spring 2025

Would you like to be innovative in whatever you pursue? Innovation is about solving important and complex problems to create value for the greater good. Innovating through design thinking is a structured, human-centered process for creatively solving problems, which can be adopted by anyone. In this foundational course we will introduce the mindset, process and methods at the core of design thinking. Students will see inspiring case studies, hear from cutting edge practitioners, and work on a project to internalize this learning. Students will discover design thinking is a practical toolkit that helps them reliably innovate in the face of changing social needs, business disruptions, and technology shifts.

Credits: 3

ENGR110101

Introduction to Human-Centered Engineering

Conroy, Kristen M

Spring 2025

In this course, we will learn about and practice engineering methods to tackle design problems through a human-centered lens. These methods include introductory work with: mathematical models, statistics, physical prototyping, computer-aided design, decision-making approaches, and observation and interview techniques. We will learn how these methods can be employed while working on a design problem, including problem formulation, data analysis, design trade-offs, concept selection, and design deployment. At the end of this course, we will have a working understanding of how human-centered engineers think and work.

Credits: 4

Room and Schedule: 245 Beacon Street Room 311 MWF 10:00AM-11:50AM

Engineering Analysis Lab

Perreault, Luke

Spring 2025

In this course, students will apply integral calculus and scientific principles to develop analytical solutions for engineering problems. Students will learn how to devise experiments, collect and analyze data, and conduct basic error analysis. The course will be structured as individual experimental modules to get hands-on experience with fundamental instruments including power supplies, sensors, electromechanical components, and computer-based data acquisition systems. Following this course, students will be equipped to apply quantitative analytical techniques to a variety of practical engineering problems.

Credits: 2

Engineering Computation and Programming

Rodriguez, Hector E

Spring 2025

In this course, students will be introduced to computational tools used in engineering through the MATLAB computing and programming environment. Students will also learn and apply fundamental concepts from linear algebra to solve engineering problems computationally. Topics to be introduced include loops, functions, arrays, matrices, and vectors. Students will be expected to complete weekly assignments and a final project in which students will use the MATLAB computing environment to solve an appropriately scoped computing/engineering problem.

ENGR210301

Engineering Foundations Studio III

Salifu, Ali A

Spring 2025

In this course, students will be introduced to thermodynamics and transport phenomena (fluid mechanics, heat transfer, and mass transfer). Students will first learn about thermodynamics (from the engineering perspective) to understand how systems interact with their surroundings. This will be done from the context of the laws of thermodynamics (zeroth, first, and second) and the concepts of work, heat, internal energy, enthalpy, entropy, and the Carnot cycles. This knowledge will then feed into discussions of the three transport processes (fluid mechanics, heat transfer, and mass transfer) from the context of the laws of conservation of momentum, energy, and mass.

Credits: 4

ENGR310501**Introduction to Statistical Data Analysis and Machine Learning****Mohebbi, Amin****Spring 2025**

This course offers a comprehensive exploration of MATLAB's applications in the field of data science and machine learning. Throughout the program, students will engage in practical scripting and problem-solving, master data visualization techniques, and analyze data distributions and statistics. The course covers essential topics such as hypothesis testing, regression analysis, and the fundamentals of neural networks, equipping students with the skills to construct neural networks and integrate MATLAB into machine learning workflows. With a focus on supervised and unsupervised learning, students will learn to classify, regress, and cluster data while evaluating model performance and applying machine learning to real-world problems. Additionally, students will gain hands-on experience implementing clustering algorithms like K-Means and hierarchical clustering in MATLAB, concluding with insightful case studies and practical examples showcasing the versatility and power of data analysis with novel tools in engineering, mathematics, and scientific disciplines.

ENGR422201

Engineering Principles in Physiology

Perreault, Luke

Spring 2025

Engineering Principles in Physiology is a laboratory-based course exploring physiological concepts foundational to biomedical engineering. Systems covered include the musculoskeletal, nervous, cardiovascular, and respiratory. How the function of these systems can be evaluated and quantified in the context of engineering principles is emphasized through a combination of in-class review and laboratory projects: for example, computational modeling of enzyme kinetics within cells, methods to quantify and evaluate cardiac and respiratory function, understanding fluid mechanics within the cardiovascular system, and action potential propagation in musculoskeletal tissue. The ethical & human-centered responsibilities of engineers working at the medical-technological interface are considered for each topic through case studies and in-class discussion.

How the function of these systems can be evaluated and quantified in the context of engineering principles is emphasized through a combination of in-class review and laboratory projects: for example, computational modeling of enzyme kinetics within cells, methods to quantify and evaluate cardiac and respiratory function, understanding fluid mechanics within the cardiovascular system, and action potential propagation in musculoskeletal tissue. The ethical & human-centered responsibilities of engineers working at the medical-technological interface are considered for each topic through case studies and in-class discussion.

ENGR432001

Quantitative Sustainable Design

Brace, Emma

Spring 2025

This is a project-based course that focuses on the application of quantitative sustainable design (QSD) to energy technologies. QSD is a framework linking design and operational decisions to sustainability indicators to inform decision-making. This allows for navigation of trade-offs across environmental, economic, and social dimensions of sustainability. In this course students will learn methods for economic analyses (TEA - techno-economic analysis, LCC - life cycle costing) and environmental sustainability assessment (LCA - life cycle assessment) as well as uncertainty and sensitivity analyses. Students will apply this process to a semester-long design project of an energy technology of interest.

Credits: 4

Room and Schedule: 245 Beacon Street Room 311 TuTh 12:00 Noon-01:15PM

Satisfies Core Requirement: None

ENGR433001

Green Building Design

Herkins, Ashley;Mohebbi, Amin

Spring 2025

The intent of this course is to provide an overview of concepts in green building and sustainability practices, as related to site and building construction. We will discuss technical aspects of building energy usage and how past, current, and potential future processes are used in providing comfort and energy management for the occupants. We will also be looking at a popular internationally recognized rating system (LEED), focusing on the Building Design and Construction (LEED BD+C) specialization. Topics to be covered include: review on architectural and site plan reading, site selection and development, energy and water efficiency, appropriate applications of emerging technology, indoor air and environment quality, lighting choices (interior and site), and sustainability. .

Credits: 3

Room and Schedule: 245 Beacon Street Room 302 MWF 10:00AM-10:50AM

ENGR441001

Engineering for Sustainable Development

Conroy, Kristen M

Spring 2025

This course will focus on engineering for sustainable development. We will consider technical, social and ecological aspects of built water, sanitation and hygiene (WaSH) systems. We will engage with current design solutions and consider their acceptance and efficacy. We will explore frameworks, ways of knowing, and constraints that influence sustainable development engineering practice and areas of research.

ENGR442001

Water Quality Engineering

Hoar, Catherine

Spring 2025

This course will introduce students to water quality engineering, the branch of environmental engineering concerned with the treatment of water and wastewater. We will examine sources of water contaminants, including pathogens and chemical pollutants, and discuss the risks these contaminants pose to human health and the environment. Students will learn about the physical, chemical, and biological processes that govern contaminant fate in natural and engineered water systems. Through inquiry-based laboratories, students will apply analytical techniques for measuring water quality to assess water treatment processes. A collaborative course project will address emerging challenges in water quality and resource recovery.

English Courses: Summer 2024

ENGL101001

First Year Writing Seminar

Hincks, Martha M

Summer 2024

Limited to 15 students. Designed as a workshop in which each student develops a portfolio of personal and academic writing, the seminar follows a semester-long process. Students write and rewrite essays continuously, discuss their works-in-progress in class, and receive feedback during individual and small group conferences with the instructor. Students read a wide range of texts, including various forms of non-fiction prose. In addition to regular conferences, the class meets two hours per week to discuss the writing process, the relationship between reading and writing, conventional and innovative ways of doing research, and evolving drafts of class members.

ENGL108001

Literature Core

Portillo, Vincent

Summer 2024

In Literature Core, students explore the principal motives which prompt people to read literature: to assemble and assess the shape and values of one's own culture, to discover alternative ways of looking at the world, to gain insight into issues of permanent human importance as well as issues of contemporary urgency, and to enjoy the linguistic and formal satisfactions of literary art. Literature Core will strive to develop the student's capacity to read and write with clarity and engagement, to allow for that dialogue between the past and present we call history, and to provide an introduction to literary genres. For course descriptions of the individual sections please see:www.bc.edu/literaturecore

ENGL337301

Contemporary Theatre and Drama in London

Cummings, Scott T

Summer 2024

This site-based, four-week, summer course abroad examines the current theater scene in London and the artistic and historical legacy that has led to it. Through attending plays, visiting historical and cultural landmarks, classroom lecture and discussion, and writing exercises, we will study representative plays from the Elizabethan era up to the present day. Particular emphasis will be placed on the theatre of William Shakespeare and on recent trends in British playwriting. While the course is classroom-based, our primary 'text' will be the city of London itself, the theatre capital of the English-speaking world. Attending theatre productions (and writing and talking about them) is central to the course.

English Courses: Fall 2024

ENGL100901

First Year Writing Seminar for Multilingual Students

McCabe, Kara M

Fall 2024

Limited to 15 students; Satisfies core requirement for writing; Department Permission Required This course, the first half of a year-long sequence of core English courses, is designed for students whose first language is something other than English. In this workshop, students will develop a portfolio of personal and academic writing and provide ongoing feedback to one another as part of a writing community. They will write and rewrite essays throughout the semester, discuss their works-in-progress, and receive feedback during individual conferences with the instructor. Students read a wide range of texts and consider the structure and organization of English rhetoric as they work to develop their own prose. Seats are prioritized for students who have been recommended for targeted language support. This course may be taken in place of ENGL 1010. Students place into this course based on BC's English Writing Assessment taken during the summer prior to freshmen year or in consultation with the director of the program, lynne.anderson@bc.edu

ENGL100909

First Year Writing Seminar for Multilingual Students

Lee, Pyunghwa

Fall 2024

Limited to 15 students; Satisfies core requirement for writing; Department Permission Required This course, the first half of a year-long sequence of core English courses, is designed for students whose first language is something other than English. In this workshop, students will develop a portfolio of personal and academic writing and provide ongoing feedback to one another as part of a writing community. They will write and rewrite essays throughout the semester, discuss their works-in-progress, and receive feedback during individual conferences with the instructor. Students read a wide range of texts and consider the structure and organization of English rhetoric as they work to develop their own prose. Seats are prioritized for students who have been recommended for targeted language support. This course may be taken in place of ENGL 1010. Students place into this course based on BC's English Writing Assessment taken during the summer prior to freshmen year or in consultation with the director of the program, lynne.anderson@bc.edu

Students write and rewrite essays continuously, discuss their works-in-progress in class, and receive feedback during individual and small group conferences with the instructor. Students read a wide range of texts, including various forms of non-fiction prose. In addition to regular conferences, the class meets two hours per week to discuss the writing process, the relationship between reading and writing, conventional and innovative ways of doing research, and evolving drafts of class members.

Credits: 3

ENGL108001

Literature Core

Lehman, Robert S

Fall 2024

In Literature Core, students explore the principal motives which prompt people to read literature: to assemble and assess the shape and values of one's own culture, to discover alternative ways of looking at the world, to gain insight into issues of permanent human importance as well as issues of contemporary urgency, and to enjoy the linguistic and formal satisfactions of literary art. Literature Core will strive to develop the student's capacity to read and write with clarity and engagement, to allow for that dialogue between the past and present we call history, and to provide an introduction to literary genres. For course descriptions of the individual sections please see: www.bc.edu/literaturecore

Credits: 3
